

# GamiFi master investigation

Historical source edition | 7 September 2026

Public crypto research edition. The following material preserves historical analysis, source identifiers, transaction amounts and stated qualifications. Observations retain their original dates, principally 5-7 September 2026. Preparing this edition did not repeat the blockchain, corporate-registry or legal research.

Read each assertion with its cited source and limits. A public role, a wallet connection or a valid transaction does not by itself identify a human operator, prove personal receipt or establish wrongdoing. The reports distinguish findings, interpretations and unanswered questions.

Correction precedence: the 7 September 2026 ShibaFriend claims review reports repayment of the principal of all 23 non-dust funding addresses, with only 168 base units of dust unmatched. It also reports equal project matches for all 194 identified paid Mystery Box mints. Those later findings supersede earlier uncertainty about those specific questions. See [Research\\_Paper\\_ShibaFriend\\_Claims\\_Review.pdf](#).

Original source-page labels and reference identifiers are retained where useful. Gaps in numbering reflect the crypto-only scope. Historical references to companion records are locators; consult the repository inventory to see which records are included. Current availability of an external source is not guaranteed.

# Contents and document control

| Consolidated investigator edition | Video review revision, 7 September 2026

This consolidated edition presents project history, corporate records and control changes; verified blockchain accounting and global archives. Source identifiers and hyperlinks are retained. Blockchain, registry and archival observations remain tied to the dates and verification limits stated in the report.

|                                                                  |    |
|------------------------------------------------------------------|----|

| Additional primary identifiers for printed review                | 36 |
| September reward-claim source                                    | 37 |
| Recorded NEM context sources                                     | 38 |

**Consolidated edition, 7 September 2026 | All times UTC.** Principal chain: BNB Smart Chain, **56**; Time Raiders distribution uses Polygon, **137**. Historical observations retain their individual dates.

## 1. Conclusions and evidence navigation

**Original FOMO principal was refunded; original GAMI funders received exact vesting allocations; the Time Raiders BUSD balance is located; and the pooled-wallet route now reaches a previously identified administrative address.** These findings materially narrow earlier delivery/settlement gaps. They do not identify the humans controlling the wallets or establish Laura's personal receipt.

**A separate Polygon event is now documented:** on **13 November 2025**, new upgrade control enabled withdrawal and sale of **1,512,577.663750419638336396 XPND**, exactly the remaining backing for 107 allocation addresses. These included **38 original BSC funders** with **443,781.846196483910388258 XPND outstanding**. The recipient received **325.142524926446493136 POL gross** from the sale. The human responsible, circumstances of authorization and later compensation remain unresolved; the original BSC BUSD is a separate balance.

The November 2022 event remains distinct: **44m GMI** removed from three obligation-bearing contracts and sold for **5,174.293394005109506048 BUSD**. Launchpool's **14m-GMI deficit** is measured against all **7,495 original schedules**; the two other sources held staking principal. Six May 2023 replenishments total **46.02m GMI**, restoring the smaller staking pool's recorded-principal backing at one block while leaving the larger short. All five private claims total **120m GMI**; the earlier **107.87m** tracing gap is closed.

The seven March-June project withdrawals total **63,001.817377359365034843 BUSD**. They are not a theft or unpaid-loss total. Original FOMO's **27 funders** received exact principal refunds. Original GAMI's **127 funders** received exact recorded allocations, with claims and remaining backing separately measured. Original project 4's **2,000 BUSD** now follows a same-amount circular address route back to its initial pooled source. That sequence does not establish an outside customer's theft, a test purpose or common human ownership.

Laura's named promotional statements and CEO role require their own approval/knowledge analysis. Her replacement was announced **1 September 2022**, before the later control changes and November transactions. Neither a title nor current shared owner address identifies a historical human signer. No verified Cayman bank account, named exchange customer or Laura receipt was recovered.

**Companion exact ledger:** `evidence_tables/GAMIFI_FINANCIAL_REGISTER_T001_T262_EXACT_2026-09-07.csv` and the same basename `.md` preserve all **262 historical transfer/fee rows across 172 transactions**, unchanged. CSV includes each original Markdown row for lossless comparison.

`GAMIFI_FINANCIAL_REGISTER_VALIDATION_2026-09-07.json` verifies row identity/order, unique IDs, transaction count and hashes. The original workbook `GAMIFI_ONCHAIN_LEDGER_2026-09-06.xlsx` retains valuation formulas, exact-text amounts and all 7,495 schedules. New discoveries have not been given fabricated historical dollar marks or silently inserted into that dated ledger.

Original sources remain in `GAMIFI_COMPLETE_EVIDENCE_2026-09-06.zip`, the missing-evidence/global-archive collections and the **63,002-BUSD evidence pack dated 7 September**. This edition adds the GAMI-delivery, pooled 35b and project 4-control raw evidence described by **N01-N04**, plus the Polygon records and independent review in section 4. B01-B34 and GA01-GA22 retain their original source identities. Earlier reports are work product, not independent corroboration. A failed request is an access result, not proof of an absent event. No private-account access, blockchain transaction or external record request was undertaken.

## Financial categories must remain separate

| Finding                                                        | Established amount                                                         | Historical dollars / interpretation                                                                               |
|----------------------------------------------------------------|----------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|
| Complete private allocation paid out                           | 120,000,000 GMI in five claims                                             | Claim-time marginal marks total US\$22,859.76 / C\$30,902.87; not cash proceeds                                   |
| Private beneficiary's direct GMI sales                         | 42 sale outputs across four assets                                         | Gross received-asset value US\$10,226.39 / C\$13,755.46; not profit or bank cash                                  |
| Private route into MEXC-associated wallets                     | 18,000,000 GMI in four sweeps                                              | Arrival-time marginal marks total US\$2,153.25 / C\$2,906.98; exchange sales unproved                             |
| Launchpool backing deficit created 5 Nov 2022                  | 14,000,000 GMI                                                             | Withdrawal-time marginal mark US\$2,675.88 / C\$3,616.99; not a dollar-loss calculation                           |
| Combined sale of Launchpool's 14m and two other contracts' 30m | 5,174.293394005109506048 BUSD                                              | Actual on-chain output; US\$5,174.14 / C\$6,993.89                                                                |
| Seven earlier project-contract withdrawals                     | 63,001.817377359365034843 BUSD                                             | US\$63,019.16 / C\$79,740.69; original FOMO refunded; other commercial settlement and entitlement addressed below |
| Separate 13 Nov 2025 Polygon withdrawal and sale               | 1,512,577.663750419638336396 XPND; 325.142524926446493136 POL gross payout | Matches remaining recorded XPND backing; no historical dollar-loss estimate assigned                              |

A market mark is quantity times a marginal historical price, not cash, investment or realizable liquidation value. Actual sale outputs remain cryptoassets, gross of gas. Claims, sales, exchange arrivals, liquidity additions/redemptions and forwards overlap; no grand loss or personal-income total is calculated.

## 2. Advertised model, publications and actual role

GamiFi promoted GMI holdings/staking/NFTs as access to partner-token allocations, with separate payment required for those tokens. Golden Ticket: **100 BUSD for three IDOs or three months**, whichever first. The litepaper advertises **5% hosted-IDO allocation fees** and the financing plan below, not verified receipts. The private 120m-GMI storage category has no readable label and cannot be assigned to a round by matching quantities. [B01-B02]

| Published round        | Tokens             | Token price, US\$ | Published raise, US\$ |
|------------------------|--------------------|-------------------|-----------------------|
| Seed                   | 30,000,000         | 0.015             | 450,000               |
| Strategic              | 35,000,000         | 0.015             | 525,000               |
| Private 1              | 50,000,000         | 0.017             | 850,000               |
| Private 2              | 60,000,000         | 0.018             | 1,080,000             |
| Public                 | 5,000,000          | 0.030             | 150,000               |
| <b>Published total</b> | <b>180,000,000</b> | Different prices  | <b>3,055,000</b>      |

On **31 January 2022**, participation thresholds doubled with ticket counts retained and notice given. By **4 May**, GamiFi reported two IDOs and extended Golden Tickets. On **23 May**, FOMO was postponed to Q3 with a refund promise. The **29 June** SHF cancellation cited tokenomics changes and insufficient time for contract/investor updates. Their distinct outcomes appear in section 4. September FOMO relaunch is a different cohort. [B03-B07]

The version dispatcher maps original/default to **0x56c0cb2d047b69278f49b4759c1718436a546c7f** and version 2 to **0x8b65b9fe5f4fb036ef62e94406f55ffa62715f48**. Original **6 GAMI / 7 Time Raiders / 8**

**FOMO /9 Shibafriend** must not be confused with later **v2 FOMO/ID 1**, legacy migration or seed/private claims. Original ClaimBack returns participation GMI, not BUSD purchase principal. [GA01-GA03; N01]

Published discrepancies and delivery context

| Record                       | Documented comparison                                                                                                                                                   | Evidence meaning                                                                                                                                                              |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| November litepaper valuation | The 15 November edition gives a \$20m private-round valuation at \$0.018 against a 1bn supply; the 18 November edition corrects it to \$18m.                            | A corrected published arithmetic discrepancy.                                                                                                                                 |
| TGE market capitalization    | 18m circulating tokens × \$0.03 = \$540,000; four complete archived editions state \$577,500.                                                                           | A \$37,500 arithmetic difference; not cash received.                                                                                                                          |
| GAMI offering                | 28 February issuer release proposes \$100,000; 14 March frontend displays \$150,000; 28 March frontend displays \$50,000.                                               | Three different published targets; not verified conflicting cash balances or a \$100,000 loss. [GA01]                                                                         |
| Time Raiders price           | 3 March capture states \$0.22; corrected body states \$0.022 for the same \$150,000 target. Edit metadata says 5 March; first recovered corrected capture is 10 August. | Tenfold published unit-price correction. The original 80 funders' contribution/allocation amounts reconcile at \$0.022 per token; accepted legal terms remain a separate gap. |
| Mystery Box quantity         | Twelve recovered captures from July 2022 to December 2023 contain both 1,000 and 500 boxes.                                                                             | Persistent internal marketing conflict; current observed contract cap was 500.                                                                                                |
| Golden Ticket after pause    | 4 October 2023 capture still advertises 100 BUSD and three-IDOs/three-months access after the October 2022 IDO pause.                                                   | A surviving public offer; no completed post-pause purchase was established.                                                                                                   |

GAMI's **14 March** frontend offered **\$0.10 per token** and also moved TGE/vesting **21 March/21 April → 28 March/28 April**; **14 March** Time Raiders terms show **\$0.022 /\$150,000 target /15% TGE /six-month linear vesting**. Funding-event allocations now permit direct reconciliation for GAMI without assuming advertised terms were accepted. A same-day staking warning, **60-day/45-day** wording conflict, May cap increases and later pool offers require version-specific acceptance. [GA01; prior memorandum pp 6-7]

External SHF context: Gagarin **7 June 2022 \$0.0054 /18% TGE /10bn supply**; KingdomStarter post 1386 **30% TGE plus two 35% tranches** and Coinstore lock; post 1389 attributed to Norman T reverses lock and uses **1bn supply**; post 1393 schedules **30 July 35% tranche**. These are other-venue cohorts, not GamiFi receipts. [GA02]

Positive delivery evidence includes Avark's application/NFT/staking/mini-game work; GamiFi **19 August** names **Hexagon Fall, Neon Pong, Pac-Rat, Indiara**; HYPE's **1 June** article names ShibaFriend. Full releases, user availability/rewards and partner acceptance remain incomplete. Steam **2410900** had no availability/release date at the **6 September 2026** check, which does not exclude Elixir or other-platform beta delivery. **2 March 2022 Korean Newswire** identifies GamiFi as provider and **Chris Smith /BIG Esports** as contact for translation of the same Business Wire announcement; no second raise or Korean customers/operations are inferred. [GA04; GA22]

The **25 July 2024** substantive homepage and **14 May 2025 11:42:26** adult-portal capture bound an observed change, not the operator or cause. Later residence, London-headquarters claims and archive geography do not establish 2022 operating/buyer locations. Actual \$3.055m receipts/spending, reliance and net exposure remain unreconciled. [B23]

## Laura's statements and succession

January team material names **Laura Walsh CEO**. Nativz's **9 July 2022** account dates Launchpool COO appointment to **May 2021** and credits GamiFi's establishment within Alphabit; Techstars says Alphabit started Launchpool in 2020. These are operating relationships, not evidence of shares or key custody. [B08-B10]

The **MEXC 23 February 2022 10:25:42** archive, **8m58s** after publication metadata, and **1 October** comparison preserve Laura-attributed fundraising/token-audit assertions, signed/submitted legal-document requirements and first-come NFT allocation purchasing. Casey is attributed final team decisions; market-condition qualifications remain. This is preserved publisher text, not an audio transcript/private approval. Auditor-issued PeckShield report and underlying agreements remain absent. Laura's **28 February GAMI endorsement** and episode 33 burn promotion are named; RSS publication **1 July 2022 09:15:08** is not recording time and no fresh audio transcription was done. Mystery Box copy approval is unassigned. [B04; B11-B13; GA05]

The **December 2018** NEM interview and **Alex Tinsman** endorsement supply earlier professional context, with separate speakers and no established intentional lie. They are assessed in the current KidletCoin/NEM master section 2, **Recorded NEM statements and council endorsement**. English automatic captions contain recognition errors; timestamps are review locators. The custody comparison appears in section 6 below. [VNEM-G1-G2]

**Eleanor Rooney was announced as CEO on 1 September 2022**, with prior Alphabit/Launchpool analysis roles described; the homepage still named Laura on 4 September and changed by 6 September. Portuguese team panels show Laura January-May, Rooney **7 September 2022 /23 January 2024** despite stale podcast teasers. Rooney's **3 October** update pauses IDOs. Later technical-control actions require dated mandates for the keys, not assumptions about either CEO. [B14-B16; GA06]

The litepaper names **Liam Robertson** as adviser and Alphabit Digital Currency Fund CEO. That role and the indexed Ghaf portfolio listing supply no investment amount/ownership/transaction instruction. Yield's **11 March 2021** offer advertised treasury/custody for Launchpool projects, **20,000 YLD /up to 20% APY**, Alphabit facilitation; GamiFi use is unproved. Terms clause 7.1.3 fund wording matches earlier Launchpool/Yield templates after provider-name/typography normalization, independently repeated; Yield operator/custodian names cannot be assigned to GamiFi. [B01; B17-B18; B31-B34]

## 3. Token, NFT and market mechanics

Initial creation **17 January 2022 23:09:27**, exactly **1bn GMI** zero-address Transfer. Matched token logic reproduces **6,989 executable bytes** excluding metadata, with no public mint/burn after initialization. Unrestricted-mint repository file did not match and is excluded. Upgradeable code is not an immutable history guarantee. Two **18 January 23:16:28 /23:16:58** upgrades change/restore logic without receipt mint/transfer; separate from November allowance mechanism. [B24-B27]

Matched Mystery/Duke implementations include metadata. Sampled public Mystery purchase sends **25,000 buyer GMI +25,000 prefunded GMI** to sink; owner batch mint sends only prefunded contribution. Supply is not paid-buyer count or 50,000 per NFT. At **block 120,183,085**, supplies **200/193**, both caps 500; Mystery balance 0 and buy(1) simulation reverts before buyer payment. Sink at **120,182,210** holds **9,850,042 GMI**. This establishes mechanism and sampled failure, not July 2022 depletion or every burn source. Both shared owner **f27/ProxyAdmin 6ef**; original GMI deployer **0x0d2c8df71c846d0dbc9c8bc75ea39c45d5197dca** differs from vesting/NFT deployer **3e0f**. [B28-B29]

Three verified PancakeSwap pools held about **0.8442 WBNB /0.00468 BUSD /0.02076 USDT** quote reserves at separate 5 September blocks. All **14,751 chain receipts /24 blocks** around advertised **18 January 2022 14:30** listing minute contain no GMI/pool logs; they are not 14,751 GMI trades. Thin later liquidity/one empty minute does not establish manipulation. [B30]

## Membership identity, payment and usage

At **23 March 2022 14:58:07 /block 16,311,927**, `memberCard()` returns **0x0be0e13c828b60b53d7577651cc54581855f7bad**, name **GamiFi RPG**, supply 100, owner 0d2c. At **6 September 2026 15:10:14 /120,324,101**, supply 100, owner f27, same implementation **0xf4c95885a11b4e3bd9dbc0ae5b179e3f22e0a369**. Earlier frontend used **0x01247d730f7445b81a3fad9be567994c0196dd9c** before 16 February; not one contract history. Equal endpoints do not prove no interim mints/burns/upgrades or 100 paid memberships. [GA07]

Repository `MemberCard.sol` separates BUSD purchase/free-admin mint/payment/activation/use, initializes 100-BUSD fee and treasury **0x35b119730f79881dac623dc51c831c6a04cab5f3**. **Historical implementation match remains unverified**; Sourcify 404/explorer failures are access results, not absence of source. [GA08]

The 21 September client bundle defines email/password registration, wallet metadata, `usermeta/{uid}`, `funded/staked projectRecords` and `nftdata/{uid}` `use/index/series/URI/timestamps`. These are custody/usage export targets, not accessed customer data. `gamifi-ffc78 /us-central1` do not prove storage geography/actual processing or link 120m beneficiary to a person. [GA07]

## 4. Seven project withdrawals and customer outcomes

Seven successful ordinary project withdrawals total **63,001.817377359365034843 BUSD**, with historical marks below. Their sum matches the nine original project records' funded-total counters, not a lifetime company-revenue total. Both historical implementations were recovered and compiled with verified Solidity 0.8.4; full runtime including metadata matched **14,983 bytes in March /15,877 in May-June**. All seven paid full funded amount after configured funding end and changed withdrawal flag false → true without adjacent-block implementation change. [N01]

| Project ID | UTC                    | BUSD                         | US\$ mark | C\$ mark  | Recipient                                          | Receipt                 |
|------------|------------------------|------------------------------|-----------|-----------|----------------------------------------------------|-------------------------|
| 1          | 2022-03-10<br>15:25:05 | 252.5                        | 252.51    | 322.61    | 0x8fea0bb760218<br>398d32d4a9ef185<br>53c403e3c2a0 | <a href="#">receipt</a> |

Original names **6 GAMI /7 Time Raiders /8 FOMO /9 SHF** total **60,639.317377359365034843 BUSD**. Earliest named captures **13 March /14 March /3 June /14 July 2022** respectively; first two predate withdrawals, last two postdate them. IDs 1/3/4, totaling **2,362.5 BUSD**, remain commercially unnamed; later v2 FOMO ID 1 cannot rename original ID 1. [GA01]

IDs 1/3 caller 8fea was owner; March IDs 7/6/4 caller 3e0f was owner; May/June IDs 8/9 caller 3e0f was enabled administrator under owner 14cc. Technical permission does not prove commercial authorization. The code requires no invoice or customer-token receipt. `claimBack()` returns staked GMI, not BUSD. [N01]

### Original FOMO: full principal refund

All **34 funding events /27 addresses** exactly reconcile to **3,775.228767123287671432 BUSD** repaid to those same addresses on **23 May 2022**. Withdrawal **11:50:16** → 56aa; same amount returned **11:56:31** → 3e0f; batch contract **0x4867171d50f734c34b020c45df23133cab5793a6** paid **two funders/23 BUSD at 15:23:53**, then **25 funders/3,752.228767123287671432 BUSD at 15:37:05**. No contributor or amount is unmatched; all 34 funding and both payout receipts independently checked. Complete funding range **17,853,530-18,041,680**, 19 successful chunks, matches contract total. The batch contract is an intermediary, not final beneficiary. [N01 E03]

Notice metadata **23 May 03:21:19.809** and archive **13:00:44** are different timestamps; Telegram 555 repeated promise **14:24:52**. Actual receipts now establish that original principal promise fulfilled. Later September FOMO, legacy migration, seed/private, staking/NFT and other token losses remain separate. Original FOMO must no longer appear as an unresolved BUSD refund or proven stolen principal.

### GAMI: exact buyer allocations and backed remaining claims

**GAMI token 0xf0dcf7ac48f8c745f2920d03dff83f879b80d438 is distinct from GMI.** Original ID 6 has **154 funding events /127 addresses, 28,421.141280969119319259 BUSD** and event-recorded **284,211.41280969119319259 GAMI** allocation. **Every original funder's aggregate allocation exactly matches the vesting setup; no funder was omitted.** Expected allocations come from actual funding events, not assumed accepted marketing price. Final configured window accounted for only 1,660 BUSD, so the successful complete **16,000,000-16,164,960** census includes preceding funding; all 154 receipts independently crosschecked. [N02]

On **28 March 2022 10:07:05**, 56aa sent **555,555 GAMI** to 3e0f, transaction **0x2b21af95699be3decdd17d62c3c1d8da96a4d21b7f848d6d58ffd47769716c766**, block 16,449,700. At **11:38:29**, 3e0f transferred all 555,555 into archived endpoint **0xf1adf471918b65006bf5d8505f6df976d9873d8b**, creating **157 allocations**, transaction **0x4a8ebec724b6bc76a07ce56c239f2f16b3f03361f558fe959dc86f55c96ffe5b**, block 16,451,528. Setup: **10% initial /zero cliff /23,328,000 seconds (270 days)**, maturity **23 December 2022 11:38:29**. Historical implementation **0x957e15b2fa377bfe35e6134411c65bd36dab9522** independently compiles to exact **4,895-byte runtime**; both route receipts independently reproduced.

Pinned **block 120,402,387 /7 September 2026 00:57:54 UTC** atomic Multicall reads all 157 vests/balance/owner/token/pause; later Defibit read returns identical bytes:

| Group                          | Allocated GAMI            | Recorded claimed           | Remaining                  |
|--------------------------------|---------------------------|----------------------------|----------------------------|
| 127 original funding addresses | 284,211.41280969119319259 | 173,544.016373193397146791 | 110,667.396436497796045799 |
| 30 additional addresses        | 271,343.58719030880680741 | 91,221.977804806657993183  | 180,121.609385502148814227 |
| Total 157                      | 555,555                   | 264,765.994178000055139974 | 290,789.005821999944860026 |

Actual GAMI balance **290,789.005821999944860026** exactly backs all remaining allocation records. Amounts unchanged, schedules mature, token unpaused, owner f27. Original buyers: **53 fully claimed /62 partial /12 no recorded claim**. All 30 extra addresses have partial claims; 29 initially receive **9,044.786239676960226913 GAMI** each, one 20 base units more. Their consideration/entitlement/purpose remains unexplained. They did not reduce the original 127 buyers' allocations. A funded claim record is not every token in a buyer's wallet; claim counters are not a lifetime receipt/onward census. Token value, access and associated BUSD business settlement remain separate questions. [N02]

### Time Raiders: located BUSD and Polygon delivery

Original recipient **0xd2b806f9c0352a267ce7ccf33e74d68c070d6171** had zero BUSD before receipt. At **block 120,394,077 /6 September 2026 23:55:32**, hash **0x779aaa476a63ca5f06ca65989f33617ab4851f24970f9114a9182c6cbba8b809**, it held exactly **23,722.715761539594859905 BUSD**, equal to withdrawal. Latest checks from three providers agreed. This does not prove continuous immobility, accessible keys or entitlement. Two lifetime ordinary signed transactions: **24 January 2022 286,013.071750000025796608 GMI**, and **4 November 2022 0.03854508 BNB → f4f8**; neither BUSD transfer/approval. Delegated token movements need separate audit. [N01 E04]

First-party terms described BSC funding, Polygon delivery, automatic initial distribution scheduled **18 March 12:30 UTC**, then dashboard claims. Archived endpoint **0xCFB37488eE5EBBADf9B879C05d318BeB7b85f6A5**, chain 137, is the exact delivery target. [GA01; N01]

### Time Raiders: delivered tokens and a separate 2025 withdrawal

The original BSC offering and the later Polygon event must be assessed separately. A complete six-query funding census identifies **111 contributions from 80 addresses**, totaling **23,722.715761539594859905 BUSD**. Every address matches a Polygon allocation at the contract's **0.022 BUSD/XPND** rate, with integer rounding applied to each contribution. All 80 received actual initial XPND transfers on **18 March 2022**.

The published Polygon vesting contract held **149 allocation records**. Initial distributions plus **437 successful later claims** match every address's historical claimed counter exactly; three other indexed claim calls reverted. Immediately before the 2025 upgrade, **107 addresses** still had tokens outstanding, including **38 of the original 80 BSC funding addresses**. The other 42 original funding addresses had received their full allocations.

| Group                             | Allocated XPND               | Actually delivered XPND      | Outstanding before upgrade   |
|-----------------------------------|------------------------------|------------------------------|------------------------------|
| Original 80 BSC funding addresses | 1,078,305.261888163402722904 | 634,523.415691679492334646   | 443,781.846196483910388258   |
| Other 69 allocation addresses     | 2,330,785.738111836597277096 | 1,261,989.920557900869328958 | 1,068,795.817553935727948138 |
| All 149 records                   | 3,409,091                    | 1,896,513.336249580361663604 | 1,512,577.663750419638336396 |

These amounts were mature under the original contract's rules: the schedule ended **14 September 2022 at 12:37:03 UTC**. At Polygon block **78,964,530, 13 November 2025 11:39:06 UTC**, the total outstanding amount exactly matched the contract's XPND balance. The original implementation was independently recompiled to its complete **4,960-byte deployed runtime**. The per-address ledgers and receipt reconciliation are preserved in the `timeraiders_delivery` evidence folder.

### On 13 November 2025, the following sequence removed and sold that entire balance.

| UTC      | Action                                                                                                                            | Primary transaction      |
|----------|-----------------------------------------------------------------------------------------------------------------------------------|--------------------------|
| 11:37:26 | A transaction sent by 4d96 to 3e0f replaces 3e0f's existing code delegation and transfers ProxyAdmin ownership from 3e0f to 4d96. | Delegation and ownership |
| 11:39:08 | 4d96 uses its new upgrade authority to replace the vesting implementation.                                                        | Implementation upgrade   |

| UTC      | Action                                                                                                        | Primary transaction    |
|----------|---------------------------------------------------------------------------------------------------------------|------------------------|
| 11:40:16 | 4d96 withdraws <b>1,512,577.663750419638336396 XPND to itself</b> . Contract balance becomes zero.            | Token withdrawal       |
| 11:46:10 | 4d96 sends the full amount through a 1inch swap and receives <b>325.142524926446493136 native POL gross</b> . | Swap and native payout |

The recipient held zero XPND before the withdrawal, the exact withdrawn amount before the swap, and zero afterward. The final POL payout is established by native-system transfer logs and a balance reconciliation. Its balance rose **325.048546292010275756 POL**; adding the swap's **0.09397863443621738 POL** gas fee reproduces the gross payout exactly. Earlier transaction fees are separate. Intermediate USDC, WBTC and wrapped POL are steps in that one route, not additional proceeds. The separate **3,781.44415937604909584 XPND** split within the route has not been assigned a contractual purpose. Neither the original offering price nor these intermediate amounts establish customer damages.

**Control explains how this was possible.** Ordinary vesting ownership changed from 3e0f to f27f on **29 September 2022**, but the separate ProxyAdmin upgrade authority remained with 3e0f at that date and immediately before the November 2025 change. Transferring ordinary ownership did not itself transfer upgrade control. A post-upgrade owner() call reverting does not prove earlier allocation storage was erased.

The 2025 transaction contains an **EIP-7702 authorization**. Independent signature recovery by two methods identifies **3e0f** as its cryptographic authority. The signed tuple authorizes a chain, code target and nonce; it does not itself sign a commercial mandate or the explicit ownership-transfer instruction. The outer transaction sender was **4d96**. The evidence proves address-level delegation, not who used the key, what they understood, whether access was compromised, or whether the transaction had legitimate business approval. It replaced an existing delegation rather than creating the address's first delegation.

| Polygon role                                   | Full address                               |
|------------------------------------------------|--------------------------------------------|
| XPND token                                     | 0x03f61137bfb86be07394f0fd07a33984020f96d8 |
| Vesting proxy                                  | 0xcfb37488ee5ebbadf9b879c05d318beb7b85f6a5 |
| ProxyAdmin                                     | 0x7ece517ee810f95f540c0ebdbdb09c4ae3d64720 |
| Original deployment / upgrade authority        | 0x3e0f4c7bdf9bcc4aa9f22b3d03048b3ef2d7199  |
| Ordinary vesting owner before upgrade          | 0xf27f9a2eb9b2c70d32476cf9dc2d74ca4e61c27b |
| New implementation                             | 0xd346309df75eb6832bdc90dd8ba3b8e0264c97e3 |
| New controller / withdrawal and sale recipient | 0x4d96f2d2143dd74a96d015a70953a5686fa6ed55 |

**Assessment:** this is documented removal and sale of tokens that exactly backed mature, unclaimed contract allocations. It is a specific adverse event with identifiable affected addresses. The record does not yet establish the human responsible, informed authorization, later migration or compensation, or the final economic loss. Explorer phishing labels are third-party annotations and are not the basis for that conclusion. Laura is not identified as a signer or recipient; a November 2025 event cannot explain her September 2022 departure without separate connecting evidence.

The **23,722.715761539594859905 BUSD located at d2b8 on BSC** is a different asset on a different network. The Polygon finding does not establish that this BUSD was stolen or settled to a bank. Current zero XPND backing is separately pinned at Polygon block **93,358,017, 7 September 2026 00:47:39 UTC**; continuous intervening balances were not fully queried.

**Sources and reproducibility:** timeraiders\_delivery/SUMMARY.md, original80\_bsc\_funder\_delivery\_ledger.csv, all149\_buyer\_delivery\_ledger.csv, claim\_receipts\_verified.json, authorization\_recovery.json and timeraiders\_review/REVIEW.md. Fresh decisive-receipt checks used the same successful Polygon RPC provider; arithmetic and local signature recovery were independently performed. The claim census is all 440 explorer-indexed ordinary claim calls

reconciled to all 149 records, not an unrestricted internal-call census. Primary technical sources: EIP-7702, 1inch deployment list, Polygon system contracts and Polygon native-transfer event schema. Issuer token identification: Time Raiders XPND guide.

## Shibafriend: elections and later token routes

**29 June 2022** notice offers **refund OR private-allocation SHF plus 1,000 GMI**; withdrawal **22 June**, seven days before notice. Full **18,684,400-18,766,000** census, nine successful chunks, **27 events /26 addresses /4,720.231567727363184247 BUSD**, independently verified. All buyers cannot be presumed to have elected refunds. [N01 E03]

On 27 June, pooled 35b paid two original funders: **0xd2d686771f2726f827b1d17930fd17dd8df4b7e2**, contribution **0.0000000000000001 BUSD**, received 600; **0xe5d5245dce768ef43f1c5fa9c96b7e1520d96dc8**, contribution **1,243.781094527363184079**, received 4,050. Neither exact match, both before cancellation; amounts may include other obligations. No ordinary signed 3e0f transaction occurred after 22 June until 5 July; its next two were deployments without BUSD logs. This excludes directly signed refunds by that key in that interval, not another payer/delegation/later refund.

Later exact-token records provide distribution leads, not repayment proof:

**0x96bad480691fee450598f3a6c144f09fa5df950d**, **85,733.882037037 tokens** received 11 July, sent 3e0f, returned 13 July, forwarded 25 August to **0x74f7a03ee449bbe36f2c8201348962657cf96ddc**. Token **0x2d4df8a0e975e15ea443933affb27afe9395e2a8**, **9,259,259.2592** received 24 August; next-day split **9,166,666.666608 → 74f7 /92,592.592592 → 0x3643c5c1ac8a7ecf0011e174ec8f94c451f833c3**. The 99%/1% split does not establish a fee. Neither recipient appears among original 26 funders; intermediated delivery remains possible. Required records: elections, allocations, 1,000-GMI bonuses, delivery/refund hashes and recipients' records. [N03]

## Project 4: same-amount route back to its source

Sole funder **391a = 0x391a51d884b240908a88e1e757ec42189d294423** was supplied **10,000 GMI and 1 BNB by 35b** before its first outgoing call. **11 March 2022** sequence: private beneficiary 3604 → 35b **10,000 GMI 10:22:10**; 35b → 391a **10:25:19**; 35b → 391a **1 BNB 10:29:16**, 36 seconds before nonce 0 approval; 391a stakes 10,000 at 10:30:10. Then 35b → 3604 **2,000 BUSD 10:52:07** → 391a **10:54:34** → project 4 **10:55:04**. 391a had no code and exactly 2,000 BUSD before funding. `claimBack(4)` returns 10,000 GMI **11:55:43**, not BUSD. [N03-N04]

On **23 March 14:56:37**, owner 3e0f changes receiver 8fea → 35b; **14:58:07** withdraws 2,000 there, consecutive nonces 117/118. Setter

**0x39f7777f43b5155f7238fa822d796206ddcd74e0b27481c78f33b7debf00f8cc**. This is a same-amount circular address route. It does not uniquely identify fungible units, establish a test purpose, self-dealing or theft, or identify a human. The initial funds' commercial origin and the applicable mandates remain unknown. The March BUSD is not proceeds from November claims.

391a later sends **100 GMI 29 March 09:32:17 → 0xecc90d54b10add1ab746abe7e83abe178b72aa9e** and **9,900 GMI 6 December 11:32:09 → 3604**, latter independently rechecked at block 23,670,820. The sum does not replace a complete incoming-token census. Seven of ten signed transactions are represented (nonces 0-5,8); historical nonce samples for 391a/8fea/3e0f/14cc are retained in N04. Gas provenance is observed pre-use funding, not earliest-ever BNB proof. Original IDs 1/3 have six events/four funders and two overlapping funders respectively; all three small projects have configured 300-block windows. Purposes and human control remain open. [N04]

## 5. Pooled wallet 35b: large mixed flows and administrative sweep

**0x35b119730f79881dac623dc51c831c6a04cab5f3** received GAMI proceeds **28,421.141280969119319259 BUSD 17 May 2022 11:30:34** and SHF **4,720.231567727363184247 BUSD 22 June 10:33:58**, through 56aa, combined **33,141.372848696482503506**. 56aa had zero BUSD before each project receipt and its ten ordinary outgoing transactions are reconstructed. 35b's pre-receipt balances **283,305.280000000000000012 before ID 4 / 183,169.280000000000000012 before GAMI / 131,015.421280969119319271 before SHF** establish commingling. The ten 27 June BUSD payments total 39,970; next-payment/FIFO attribution cannot isolate offering proceeds. [N01; N03]

Public indexed history yields **193 unique ordinary rows: 184 outgoing/nonces 0-183 plus 9 incoming**, all 184 successful, **29 November 2021-7 November 2022**; every transaction/receipt independently fetched. Pin **120,402,767**: nonce 184, no code, zero BNB/BUSD/USDC. Of 459 indexed token events, 301 selected canonical BUSD/USDC/GMI/twoSHF rows each match independent receipts. BUSD ledger matches **eight historical balances**; both stablecoins net to zero. This is a reconciled indexed selection, not an independent every-block delegated-transfer census. Nineteen consequential headers confirm timestamps. [N03]

| 3-4 August 2022 UTC | Verified movement                       | Exact amount              |
|---------------------|-----------------------------------------|---------------------------|
| 3 Aug 15:50:04      | 35b → 14cc BNB                          | 390.50307622              |
| 3 Aug 15:52:22      | 14cc → 35b BNB                          | 3                         |
| 3 Aug 15:53:16      | 35b → 14cc entire BUSD balance          | 26,626.652848696482503518 |
| 3 Aug 15:53:34      | 35b → 14cc entire USDC balance          | 2,302                     |
| 4 Aug 14:54:38      | 14cc → 35b BNB                          | 200                       |
| 4 Aug 14:55:35      | 200 BNB converted into USDC             | 60,439.274293674825498827 |
| 4 Aug 14:56:08      | Exact USDC proceeds returned 35b → 14cc | 60,439.274293674825498827 |

August 3 native prebalance **390.503181225 → 0.000000005 BNB** reconciles sweep plus gas; stablecoin postbalances zero. Recipient **14cc=0x14ccacd699287c1b6ad07fd911394a05d802b412** is the earlier project owner/NFT administrator and September 14 sender of 100 BNB to later replenisher. The August 4 return arises from newly supplied 200 BNB; it is not another independent diversion of fundraising. No human owner or commercial purpose is assigned.

External BUSD inflow/outflow both **634,245.652848696482503518**; one 2,000 self-transfer makes gross Transfer sides **636,245.652848696482503518**. External USDC inflow/outflow both **1,360,439.274293674825498827**. These are pooled token flows, not raised funds/losses; do not add cross-asset turnover as new financing.

Earlier **29 November 2021** receipts: **650,000 USDC from 0x87055dd940a847592cd45239bae682a72315216d** and another 650,000 from **0xab2ebe2b463ae4b1ed697afa8a7dbe6202c1a477**. January: four counterparties each receive 250,000 USDC in 10/249,990 small/large payment pairs or single payments; 053f also 20,000, without proved payment purpose. **25 January 399,990 BUSD** arrives from **0x93cfc2f90882123989fdf9ee69cb353dd56cf4ff**. Repeated recipient **0xe6020805fd96142811cbfbc67627679f2c446d30** receives **246,171 BUSD / 185,750 USDC**; identity/payment basis remains unknown. Recurrence is not proof of payroll/services.

Additional links: **30 May 2022 02:46:57**, 35b → f4f8 **20,000 BUSD**, preceding later private-sale proceeds; **23 September 2.99606819 BNB** same direction; **7 November 0.5 BNB** returns and 35b forwards **0.499895 BNB → 78d09**, remainder 21,000 gas × 5gwei. 78d09 previously supplied Launchpool funding. Exact route and sweep hashes, receipts, source index and recurring-counterparty ledger are in N03/N04; unsolicited unrelated tokens and index labels do not establish project assets or human ownership.

## 6. November control and removal mechanism

The original Launchpool implementation lacked an ordinary owner-withdrawal function. Temporary logic granted allowance, then original logic was restored; a later transferFrom used the surviving allowance. Current restored code alone would miss this earlier permission. The January GMI token upgrades were different events.

| 5 Nov UTC | Verified action                                                                                                                                  | Evidence                    |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| 06:14:38  | Three proxies temporarily upgraded to 0x1ee3...e6fb; each grants maximum GMI allowance to Safe 0x9362...25f3; original implementations restored. | <a href="#">transaction</a> |
| 06:45:09  | 23m + 14m + 7m GMI transferred from three contracts into 0x35dc...5422 using transferFrom.                                                       | <a href="#">transaction</a> |
| 06:45:39  | Withdrawal executor 0x343c...235e sends 0.019849782233850894 BNB to 0x35dc...5422 for subsequent activity.                                       | <a href="#">transaction</a> |
| 06:51:21  | All 44m GMI sold through router 0x1111...097d; 5,174.293394005109506048 BUSD received by 0x35dc...5422.                                          | <a href="#">transaction</a> |
| 07:15:11  | 5,174 BUSD sent from 0x35dc...5422 to 0x96f0...aeb6.                                                                                             | <a href="#">transaction</a> |
| 07:15:20  | 0x4727...7c95 funds 0x96f0...aeb6 with 0.00084 BNB.                                                                                              | <a href="#">transaction</a> |
| 07:15:32  | The same 5,174 BUSD moves from 0x96f0...aeb6 to 0x4727...7c95.                                                                                   | <a href="#">transaction</a> |
| 07:15:41  | Remaining 0.000502984 BNB swept from 0x96f0...aeb6 back to 0x4727...7c95.                                                                        | <a href="#">transaction</a> |

At the later checked state, seller 35dc retained **0.293394005109506048 BUSD /zero GMI**. Intermediate swap legs are excluded from endpoint totals. Intermediary ordinary outgoing history was checked through nonces/receipts. The gas-funding/sweep pattern is consistent with collection by a service, an inference pending order mapping. [N01; original ledger]

### Signing keys and dated handovers

| Role                    | Safe / administrator                       | Signing address                            | Required signatures |
|-------------------------|--------------------------------------------|--------------------------------------------|---------------------|
| Permission grant        | 0x6bf55810ab061a016a968016818a6e1246aa8b5a | 0x538a8b615e98e87d025c4336be44e4b8588277c7 | 1 of 1              |
| Three token withdrawals | 0x9362ced428b4179650252ad87731240b32ef25f3 | 0xafd9cfc21ee553ef9c0f3e5525b077b12d0dc3f9 | 1 of 1              |

Cryptographic signature recovery and historical owner/threshold calls agree: approval key authorized two Safe calls, withdrawal key three. Both used the officially matched **Safe 1.3.0 L 2 singleton** and required **one signature**. The gas-paying executor is a different role. Withdrawal Safe changed **7e01 → afd9 on 19 September 2022 14:24:11**, transaction

0x958512439479d367fc0afd13e8928f810dfe40b4945b084bc51fffedc5b9627b; 538a created the approval Safe **4 November**, transaction 0x2ecfaeb4b20fedb2a1d0fd838c01cc9e26e898c48284d74062898861eab1bda5.

**Earlier stated safeguard:** Bit:Talk records Laura explaining multiple approvals at **5:50-6:26**. [VNEM-G1] Comparing that explanation with the one-signature settings above identifies questions about the safeguards actually adopted, independent approvers and change authorization. The 2018 clip does not identify 2022 key holders, transaction instructions or personal receipt; the September succession remains controlling context.

| UTC                 | Contract / control change                                | Transaction |
|---------------------|----------------------------------------------------------|-------------|
| 2022-09-29 08:24:51 | Launchpool owner: 3e0f...7199 → f27f...c 27b             | receipt     |
| 2022-11-04 04:29:30 | Shared ProxyAdmin owner: 3e0f...7199 → 538a...7c 7       | receipt     |
| 2022-11-05 05:51:26 | Shared ProxyAdmin owner: 538a...7c 7 → approval Safe 6bf | receipt     |

| UTC                 | Contract / control change                                          | Transaction |
|---------------------|--------------------------------------------------------------------|-------------|
| 2022-04-28 10:46:31 | GamiFi RPG owner: original GMI deployer 0d2c...7dca → 14cc...b 412 | receipt     |
| 2022-09-19 09:51:41 | GamiFi RPG owner: 14cc...b 412 → f27f...c 27b                      | receipt     |

All five vesting/admin/membership transitions above have successful receipts, direct transferOwnership input, matching events and adjacent owner states. April RPG sender 0d2c differs from vesting deployer 3e0f. September RPG transfer precedes Safe owner change **4h32m30s**. ProxyAdmin handover **5 November 05:51:26** precedes allowance transaction **23m12s**; within that transaction, Safe gives ownership to orchestrator **0x5e0cf46e675b985f992c5fafd15e56e8c9a94387**, which upgrades/approves/restores and returns it to 538a. Vesting-function ownership and code-replacement authority moved separately. These are identified transitions, not a lifetime control census or named-human mandate. [GA07; original Safe evidence]

## 7. Launchpool: original funded book fully reconciled

**39 funding transactions on 19 April 2022** created **7,495 schedules /7,490 distinct addresses**, total **15,456,885.882908530406846 GMI**; initial 10 creates two 5-GMI records. Deposit-date marginal marks sum **US\$213,274.65 /C\$269,237.92**, not cash raised. At 13:32:12, 78d09 supplied 3e0f **15,456,876 GMI**, transaction 0x00f1ad6f5d7560d5325d08d0afcf253a99b46d588a6509abb37349bacdea965f; bounded upstream also has 5 GMI and is not a full source-wallet reconciliation.

| Observation                                     | Unpaid original schedules, GMI | Vault balance, GMI            | Backing deficit, GMI |
|-------------------------------------------------|--------------------------------|-------------------------------|----------------------|
| Immediately before withdrawal, block 22,786,455 | 14,923,065.568267084392219941  | 14,923,065.568267084392219941 | 0                    |
| Immediately after withdrawal, block 22,786,456  | 14,923,065.568267084392219941  | 923,065.568267084392219941    | 14,000,000           |
| 6 Sep 2026 04:08:52, block 120,235,949          | 14,000,207.412329404181026961  | 207.412329404181026961        | 14,000,000           |

All complete records are byte-identical across the withdrawal. Claimed counters were **533,820.314641446014626059 GMI before, 1,456,678.470579126225819039** at observation; all schedules mature by **14 January 2023 17:29:53**. Independent decoding finds no amount/owner/nonce mismatch; unchanged nonclaimed fields, increasing claimed counters. **684 claimed:290 fully /394 partially; 6,811 never claimed**. Exact identity: funded-claimed-14m removed=**207.412329404181026961 held**. This is original-book accounting, not a census of all intervening claims/refills or hypothetical unfunded records. Equal endpoint deficits do not prove constancy.

Selected **587,755.519557566-GMI** allocation still fit the residual vault immediately after November, although aggregate backing failed. **24 January 2023 15:45:16**, a normal **8,309.56763892731-GMI** claim lowered balance **591,902.853950097638463553 → 583,593.286311170328463553**, below that still-unclaimed allocation; mark about **US\$0.75/C\$1.00**. This verifies a crossing, not the first-ever crossing. Receipt:

<https://bscscan.com/tx/0x7f556eb1d5da208355961506485c529d11ee850d5ebf136188a9a5e20dc202e5> .

## 8. Staking principal, settings and replenishment

Both other sources run matched **contracts/StakingV3.sol:StakingV3**, optimized Solidity 0.8.4, implementation **0x4e9fcbbbbca286a5be04bdfc9a7f7babb43253e55**. Deployment **block 20,568,349**, 3e0f, transaction **0x789bcb962b3f24f0b3d32db88d27464e2b91eabd2dc36754e840a24ecbfbcb0bb**. Complete historical/current code and proxy slots match Sourcify. Stake/reward token is canonical GMI; sampled historical/current owners f27. `getStakedAmount()` is outstanding `_stakedAmount`: stake increments user/principal counters, unstake reduces them. It is not lifetime deposits or an independent sum of all users. [GA09]

### Before/after 5 November 2022 withdrawal

| Source pool               | Recorded principal before and after, GMI | Balance before, GMI               | Balance after, GMI             | Principal shortfall before, GMI | Principal shortfall after, GMI    |
|---------------------------|------------------------------------------|-----------------------------------|--------------------------------|---------------------------------|-----------------------------------|
| 23m source, ee 57...31d 9 | 24,044,801.43862<br>27977295061          | 23,291,908.90798<br>2630011309744 | 291,908.9079826<br>30011309744 | 752,892.5306401<br>67718196356  | 23,752,892.53064<br>0167718196356 |
| 7m source, ba 30...2a 3a  | 6,789,496.100023<br>061372341            | 7,074,012.180365<br>341193990997  | 74,012.18036534<br>1193990997  | 0                               | 6,715,483.919657<br>720178350003  |

Counters did not fall with the withdrawal. Ordinary same-token `emergencyWithdraw()` permits only **balance-principal**: larger pool would underflow/revert, smaller could withdraw only **284,516.080342279821649997 GMI**. The temporary allowance operated outside that principal-preserving calculation. The larger pool already lacked **752,892.530640167718196356 GMI**. The extra 30m therefore cannot be labelled unused rewards. Same-provider re-query and independent arithmetic reproduced all eight inputs; this is not independent-node confirmation.

### Earlier principal shortfall: a verified September reward claim

A verified ordinary reward claim predates the November removals. At block **21,768,550, 30 September 2022, 02:02:48 UTC**, caller `0x575525a69fff5206ad19ad4196a34b0c9f9099d1` successfully called `claim()` on the larger ee57 pool. Receipt `0xd7c281417bbf9f2faaf74d48dfe6cf7a3e0bda0c396eb687036ae5d3c37f8d1b` records the GMI transfer and matching `Claimed` event. [SEP30]

| Pinned quantity                                   | Exact GMI                     |
|---------------------------------------------------|-------------------------------|
| Balance at preceding block 21,768,549             | 20,060,734.228641020138984537 |
| Recorded principal, unchanged across both blocks  | 19,993,776.3590497566902561   |
| Balance above principal before claim              | 66,957.869591263448728437     |
| Reward paid / net block-to-block balance decrease | 125,872.046190324849771871    |
| Balance after claim                               | 19,934,862.182450695289212666 |
| Resulting principal shortfall                     | 58,914.176599061401043434     |

The implementation slot is unchanged across the transition. Its **7,239-byte** runtime at the preceding block exactly matches the previously verified `StakingV3` runtime. Unlike owner `emergencyWithdraw()`, `claim()` pays calculated rewards without first protecting the principal counter. This explains how ordinary reward payment can consume principal backing; it does not establish wrongdoing by the claimant. The September event and November permission-changing removal are distinct mechanisms.

Historical state comes from one archive provider; the transaction receipt was also matched to Binance's BSC endpoint. Independent arithmetic/event review passed. September 3 and 20 snapshots show balances above principal; October 8 and 26 show deficits. Those samples and the 500-row index extract do **not** establish the first-ever deficit or continuous backing: the index reports `total_num: 1286` despite capping accessible rows at

500. Principal-only surplus also excludes unpaid reward obligations. The observed transition postdates the announced **1 September 2022** leadership replacement and supplies no human custody or Laura-specific authorization. [SEP30]

## Later pinned principal and balance

Block **120,314,156**, 6 September 2026 13:55:39, hash

**0xf4ceb550ce3d5d1e05a702234c1b706a6139189a7ade3d22512b7bd86392ef26:**

| Source pool | Recorded remaining principal, GMI | Actual GMI balance          | Principal shortfall, GMI      |
|-------------|-----------------------------------|-----------------------------|-------------------------------|
| 23m source  | 13,857,802.5812880519500261       | 36.462827313376469276       | 13,857,766.118460738573556824 |

## 9 May 2023 owner settings

| UTC, 9 May 2023 | Pool       | Change                                                                                                                 | Transaction                                                        |
|-----------------|------------|------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------|
| 11:57:32        | 7m source  | Duration 23,328,000 → 22,289,560 seconds; calculated end moved from 21 May 2023 12:00:00 to 9 May 2023 11:32:40 UTC    | 0x0d77687f6156a3ef4e03562c82436541203b5a69eb44a366181c4cea62b13ea4 |
| 11:58:44        | 23m source | Duration 31,104,000 → 22,289,490 seconds; calculated end moved from 19 August 2023 12:00:00 to 9 May 2023 11:31:30 UTC | 0x2afd091c33af3aa09c45eca43b33c220378968f8a12b76b5bd5b60beccc3a6fc |
| 17:49:14        | 7m source  | Pending-request delay 86,400 seconds → 0                                                                               | 0xef4061472fb4330802d65666bc8f5dd82289f4c0f4b808d29f0b7fdc0f2cd5a3 |
| 17:50:05        | 23m source | Pending-request delay 86,400 seconds → 0                                                                               | 0xedd2d8f546410926c5e84c801bb619a274601da736d167cea19c6f55f1e88acd |

Both start **24 August 2022 12:00**. New end dates were already past when set, opening post-end requests and stopping future reward-time accrual at those ends. Zero delay applies to newly calculated requests, not previously stored unlocks. Source grants owner permission; notice/consent/business mandate and all other changes remain unresolved. Five successful 10,000-block queries **28,040,000-28,089,999** found no matching GMI inflow to these pools/Launchpool; a bounded result only.

## New deposits did not repair the deficit

On **5 November 2022 10:18:23**, **0x78a191fe5158b1f64d6e9d7f3167b495fc1b5d50** staked **463.70326268367603 GMI** into smaller pool, successful block **22,790,636**, transaction **0xb52c6dc745202f103b1f1e6fcdd04b7575d71a95de3b050ee3e5beebfa94d540**. This was **3h33m14s** after removal. Balance **74,012.180365341193990997 → 74,475.883628024870020997**, principal **6,789,496.100023061372341 → 6,789,959.803285745048371**: both rise equally, deficit unchanged. It is one verified stake, not restitution, a complete inventory or first-ever post-event deposit.

## Six direct replenishments

Sender **0x949040eedb2abecc0b9d2558a6d22d9724eaea88**, consecutive nonces **19-24**, transferred **46.02m GMI:30.01m larger /16.01m smaller**. Successful token calls/events/receipts agree; sampled large top-ups raise balances without principal.

| UTC                 | Recipient  | Sender nonce | GMI        | Transaction                                                        |

The 23 August public offer matches start, cap, cooldown and durations/rates, a **configuration-based identification**, not explicit frontend address naming. Formula **principal × elapsed seconds × rate ÷ 10<sup>18</sup>**, capped at end; claims do not compound into principal. Preserve 270/360-day arithmetic rather than calendar months. Max selector **0x86f95007** independently derived. Raw evidence:

research/blockchain\_raw/, research\_deep/blockchain\_raw/;  
independent\_verification/staking\_replenishment\_recheck.json reproduces arithmetic using the same  
provider. Full rewards/user/control histories remain incomplete. [GA09-GA10]

## 9. Private vesting: the complete 120 million GMI allocation

On **18 January 2022 at 15:56:50**, the funding transaction placed 120,000,000 GMI for beneficiary **0x36048413c4edf0cf3e633aab317fcd9824dfb4d4** in private vesting contract **0x74e0ddf89807107378beb02e6bc504243e0cdf6c**. The [funding transaction](#) sets zero initial release, zero cliff and 360-day linear vesting. Category 5 has no human-readable definition in the verified implementation; it cannot identify the allocation as a particular person's, team's or investor's property.

At funding, multiplying the marginal token quote gives **US\$5,769,088.34 / C\$7,228,090.79**. The pool held only about **3.983m GMI and 413.8 WBNB**. This highly theoretical mark is not evidence of a multi-million-dollar payment or realizable sale.

All five successful payout receipts are now reconstructed:

| UTC                 | GMI                               | Historical US\$ mark | Historical C\$ mark | Receipt                     |
|---------------------|-----------------------------------|----------------------|---------------------|-----------------------------|

| <b>Total in</b>                          | <b>149,584,627.89590367<br/>2410206412</b> | <b>Total out</b>                   | <b>149,584,627.89590367241<br/>0206412</b> |

Opening and ending GMI balances are both zero. The separate 9,900-GMI receipt is [transaction 0x782a...de7ae](#), from 0x391a51d884b240908a88e1e757ec42189d294423. Liquidity tokens were mixed with the vested allocation; individual fungible units cannot be labeled as uniquely belonging to one source after mixing.

The 42 direct GMI sale outputs are:

| Asset actually received   | Exact quantity                  | Historical US\$  | Historical C\$   |
|---------------------------|---------------------------------|------------------|------------------|
| BNB                       | 12.733084792018608967           | 3,993.65         | 5,359.27         |
| WBNB                      | 2.296091425541797281            | 820.80           | 1,109.48         |
| BUSD                      | 5,361.649777056501864007        | 5,362.44         | 7,219.59         |
| CAKE                      | 13.065639141470576526           | 49.50            | 67.13            |
| <b>Gross output value</b> | Different assets; no unit total | <b>10,226.39</b> | <b>13,755.46</b> |

This total includes the earlier five selected sales worth US\$756.14 / C\$1,021.91; those five are not additional proceeds. It measures cryptoassets received, not profit, a bank withdrawal or Laura's income.

Three liquidity additions also supplied **11.779827980541797281 BNB gross**; trace-verified refunds totaled **0.000000000000000003 BNB**, giving **11.779827980541797278 BNB net supplied**. Two redemptions returned **11.149287235974376070 BNB** alongside the GMI shown above. Received and redeemed LP shares total **9,177.891351247917090180 LP**. These position movements are separate from the 42 direct-sale receipts and cannot be added as additional sale profit.

The later CAKE conversion belongs to the GMI route: A GMI sale received **13.065639141470576526 CAKE**, then transaction **0x30c5...aca71** converted that CAKE into **49.354088681602483584 BUSD**. The CAKE receipt is already included in the direct-sale total. Its later BUSD conversion is shown separately, not counted again as new GMI-sale proceeds. A failed GMI swap remains excluded from financial transfer totals.

All **100 normal transactions sent by the beneficiary**, nonces 0-99, were recovered and receipt-checked. They span 1 February 2022 through 4 April 2023; the nonce remained 100 at sampled block 120,238,607. Nine failed transactions contribute no completed asset flows. This completes the normal sender inventory through that observation; it does not establish a complete census of third-party incoming transfers or internal native funding.

The **5,361.649777056501864007 BUSD** received in GMI swaps plus the later **49.354088681602483584 BUSD** from the CAKE conversion total **5,411.003865738104347591 BUSD**. That equals exactly the ten BUSD transfers to **0xf4f86e37815217ed73ae817a4e5164d56315b1d7**. Their individual forwarding-date marks total **US\$5,411.28 / C\$7,278.79**. This is an aggregate flow reconciliation, not additional income or identification of the recipient's human owner.

An earlier separate 2,000-BUSD transfer on 11 March 2022 went to **0x391a51d884b240908a88e1e757ec42189d294423**. Seven normal native transfers also sent **27.336801380291603498 BNB** to **0xf4f8...b1d7**. Those native balances were commingled with liquidity returns and external funding; the full BNB forwarding amount cannot be assigned to GMI sale income. The **2.296091425541797281 WBNB** sale output was later unwrapped into the same quantity of BNB, an overlapping conversion preserved separately in the ledger.

## 10. Onward wallet and exchange destinations

Recipient **0xf4f86e37815217ed73ae817a4e5164d56315b1d7** has a receipt-verified inventory of **24 normal outgoing transactions**, nonces 50-73, from **7 October 2022 through 16 May 2023**. There are 23 successful transactions and one failed swap, represented only by its actual network fee. All 54 transfer and fee records carry exact base units, transaction identifiers and separate historical USD/CAD marks. This remains a bounded, historically valued sender inventory. The later archive pass verifies the next two transactions (nonces 74-75) and a selected August 2025 transaction (nonce 213), set out below. Earlier transactions, intervening nonces 76-212, inbound activity and third-party allowance transfers remain incompletely inventoried.

A **1 BNB** payment from this wallet back to private beneficiary **3604...b 4d 4** on **4 November 2022 at 14:25:04 UTC**, worth approximately **US\$356.08 / C\$481.31** at the historical mark. Its [successful transaction](#) preceded the beneficiary's **96,645,563.271604938271604938 GMI claim by 36 seconds**. Three further payments - 3 BNB and 5 BNB on 6 November, then 3 BNB on 7 November - bring the selected

reverse-direction total to **12 BNB**. This directly establishes a funding and counterparty relationship; purpose, business authority and human control remain unproved.

| New observed movement                                                 | Exact asset amount              | Historical US\$ mark | Historical C\$ mark |
|-----------------------------------------------------------------------|---------------------------------|----------------------|---------------------|
| Back to the private beneficiary, four transfers, 4-7 Nov 2022         | 12 BNB                          | 4,173.22             | 5,638.53            |
| To earlier Launchpool token source 78d 0...14c 3, 7 Nov 2022          | 0.5 BNB                         | 166.41               | 224.54              |
| To earlier project-contract recipient 35b1...b 5f 3, 7 Nov 2022       | 0.5 BNB                         | 164.35               | 221.75              |
| To unassigned recipient ba 4d...bf 53, 7 Dec 2022                     | 6,590 BUSD                      | 6,589.99             | 8,988.75            |
| To the same unassigned recipient, three transfers, 21 Oct-7 Dec 2022  | 25,906.285983337104699 148 USDT | 25,906.29            | 35,478.50           |
| 11 BNB conversion: output returned to the sending wallet, 16 May 2023 | 3,398.645844082231 USDT         | 3,399.33             | 4,574.14            |

The two 0.5 BNB payments intersect with earlier established transactions: **0x78d09e1435e1906878621bcb0aaa9d47561214c3** supplied 15,456,876 GMI to vesting deployer 3e0f on 19 April 2022; **0x35b119730f79881dac623dc51c831c6a04cab5f3** received project-contract withdrawal ID 4's 2,000 BUSD on 23 March 2022. The corresponding new transaction hashes and individual marks are in the ledger and record-request briefs. The intersections establish address relationships, not a shared human owner.

The other direct recipient is **0xba4d665059c97d6baa42e097707a504aecaafb53**. No reliable public business/service assignment was established for it in the searches performed. Its subsequent history is an open public-chain lead; this pass does not trace it onward. The May conversion returned USDT to the sending wallet and supplies no bank-payment evidence. Its swap contract remains unattributed in this report because a primary BSC deployment attribution was not established.

The wallet also sold **4,816,523.694499999999787008 GMI** in three earlier swaps; one October input equals a selected September receipt of **161,278.104499999999787008 GMI**. It made stablecoin/BNB and **0.02 BTCB** conversions and spent a pre-existing USDT balance. These commingled flows overlap or precede the private claims; they cannot all be assigned to that allocation or added to its sale proceeds. The **27.336801380291603498 BNB** received from the beneficiary and **12 BNB** returned are gross directional totals, not personal income. The prefix “f4f” does not identify FixedFloat. Historical pricing and its limitations are described once in section 13.

### Coverage extended to August 2025

Wallet 0xf4f86e37815217ed73ae817a4e5164d56315b1d7 previously had a bounded receipt inventory ending at nonce 73. New nonce-crossing locators, complete block responses and receipts establish:

| UTC                  | Nonce | Verified action                                                                         | Transaction                                                        |
|----------------------|-------|-----------------------------------------------------------------------------------------|--------------------------------------------------------------------|
| 16 May 2023 09:56:44 | 74    | Successful unlimited BUSD approval to router 0x1a1ec25dc08e98e5e93f1104b5e5cdd298707d31 | 0xa21fc15ded26cb6733c3a1bf87f2672004c2014c071c2ffdc2e2f1f28a9cfbd5 |
| 16 May 2023 09:56:44 | 75    | Successful swap: 789 BUSD left this wallet; 782.5799104396268 USDT returned to it       | 0xda4db44df3a0c3594726fbc884e1c07285c0ecea8836d481fabaa5a4de2ab57  |

| UTC                    | Nonce | Verified action                                                            | Transaction                                                        |
|------------------------|-------|----------------------------------------------------------------------------|--------------------------------------------------------------------|
| 4 August 2025 15:10:30 | 213   | Successful transaction to the same router, with 80.613025103197438517 USDT | 0xd02df3dfdf4c471e0a3ad35ee6dd8326545cff5b293dbd703efa64e2b50be5b2 |

| UTC | Nonce | Verified action                          | Transaction |
|-----|-------|------------------------------------------|-------------|
|     |       | leaving this wallet through a swap route |             |

The first two transactions share block **28,257,569** and raise the sender’s nonce count from 74 to 76. The final selected transaction is in block **56,429,586**, raising it from 213 to 214. The pinned September 2026 nonce remains 214. This extends confirmed outgoing activity to August 2025 and adds the next contiguous two transactions after the old boundary. The middle nonces 76-212 and earlier activity remain outside this receipt inventory. Incoming transfers and allowance-driven transfers can occur without increasing this wallet’s outgoing nonce.

The 2023 receipt also identifies the intermediate router executor `0xc590175e458b83680867afd273527ff58f74c02b`, trading counterparty `0x2008b6c3d07b061a84f790c035c2f6dc11a0be70`, and 5.86227 BUSD sent to `0xb28da7bc87a9dd1e60849aa7fcb5da24ea913c42`. Those are contract/transaction counterparties; none is being identified here as a human final beneficiary. The 2025 transaction includes a WBNB conversion route, but this pass does not report an exact final native-BNB receipt without an internal-call trace. The amounts are commingled wallet activity and cannot all be assigned to GamiFi proceeds.

[GA10]

### MEXC: 18 million GMI delivered to disclosed addresses

Four token transfers from the beneficiary passed through **0x9564f530d9f270a48c510a92c97b59248cefd464** and then arrived at two exchange-associated wallets:

| UTC                 | GMI                          | Historical US\$ mark | Historical C\$ mark | Receipt     |
|---------------------|------------------------------|----------------------|---------------------|-------------|
| 2022-11-04 15:00:29 | 5,000,000.000000000000000000 | 877.32               | 1,185.87            | transaction |
| 2022-11-08 17:48:21 | 5,000,000.000000000000000000 | 576.08               | 774.31              | transaction |
| 2022-12-08 02:27:14 | 5,000,000.000000000000000000 | 467.87               | 635.46              | transaction |
| 2023-01-21 02:34:05 | 3,000,000.000000000000000000 | 231.98               | 311.33              | transaction |

The first three transfers total **15 million GMI** into **0x2e8f79ad740de90dc5f5a9f0d8d9661a60725e64**. Current [MEXC proof-of-reserves disclosures](#), successfully retrieved through search indexing, list that exact address; explorers also label it MEXC 5. Direct page opens did not return the same address data. This establishes a current public association; historical custody and customer credit on the 2022 dates still require confirmation.

The January **3 million GMI** arrived at **0x4982085c9e2f89f2ecb8131eca71afad896e89cb**, which MEXC identified as its BSC wallet in its [own July 2021 disclosure](#). The four arrivals' marginal marks total **US\$2,153.25 / C\$2,906.98**. No exchange sale at those prices, credited customer or fiat withdrawal is established. Sharing an intermediary does not prove all four deposits belonged to the same exchange account.

## 11. Corporate identity, development records and authority

The SEC-hosted Alhabit Form D, **signed 1 February 2018**, describes a Cayman exempted company formed in **2017**, with Dalma Capital Management as investment manager. It identifies an organization, not a GamiFi or Laura bank account. [B18]

**Gamifi Limited - BVI 2082070** is the concrete corporate record target. The <sup>source</sup> official public-search screenshot displays the matching name/number (wrapped as 20820 / 70). The free i-BVI entry independently agrees and reports **12 November 2021** incorporation; that date still needs an official instrument. The screenshot and directory supply no registered agent, current status, officers, shares or beneficial owners. The preserved terms, captured **7 October 2022** and displaying revision **25 January 2022**, identify the BVI contracting company and attribute GMI's creation/release to it, but give no company number. The match establishes a records lead, not wallet custody. The complete February litepaper has a November 2021 cover date; neither date is an incorporation certificate. The later May capture was incomplete. [B01, B34]

Exact name/number searches across two engines and indexed BVI/FSC/Gazette and Eastern Caribbean court material produced no matching notice. Those bounded searches are incomplete. Gazette login/subscription limits do not make every historical PDF inaccessible: the corporate companion records directly retrieved older Gazette material. Directory recommendations and neighboring company numbers establish no relationships. No company search report was purchased. Official fee documentation in the BVI companion identifies the applicable US\$50 search fee.

Avark's own case study documents branding, website and launchpad development, including NFT/staking features. Its contracting entity, invoices, authorized contacts and access/deployment handovers remain missing; the public page identifies neither BVI 2082070 nor any payer or investigated key. Present wording does not establish a continuing engagement. [GA04]

The corroborated contract repository review covered **143 reachable commits, 384 unique blobs and all 34 public pull-request heads**; five Launchpool repository histories were checked against five critical keys. No match identified a custodian or mandate. The latest fetched GamiFi commit is **24 August 2022**, before the September/November handovers. **PR 13**, opened **4 January 2022** and closed unmerged **23 February**, refers to fixing an audit report. **PR 25**, merged **28 March 2022**, changes MemberCard, Staking45d/60d/90d, antiBot and multisigWallet; **Token.sol is absent**. API review lists/bodies were empty. Neither PR supplies an auditor, report, audited commit-to-deployment match or acceptance. PeckShield's public tree at commit **37558e 095a 7c 82c 9f 4f 8db 4a 84af 313ed 5eba 67c** contained **498 entries**, truncated:false, with no GamiFi path match. A private engagement remains possible; the interview's token-audit claim is still unverified. [GA05, GA11]

| Entity or record                                         | Verified identity and dated facts                                                                                                                                                                                                                                                                                                                                                  | Remaining boundary                                                                                                                                                                                         |

|                        | formation subscriptions are not the current issued-share register. <b>7 February 2025</b> meeting is the target for attendance, proxies and voting rights.                                                                                                                                                                                                                                                                                    | transfers remain missing. Custodians include company, stock-register holder, former resident agent Quijano & Asociados and successor Mario Ernesto García de Paredes Estripeaut. [GA15]                                                                                                           |
| Linford / SCR Advisors | Linford Corporate Services <b>1943018</b> ; Linford Management Services <b>1943021</b> ; original <b>11 December 2018</b> Gazette preserved. Exact Gibraltar UBO/GLEIF searches did not identify SCR Advisors.                                                                                                                                                                                                                                | Linford restoration/material-date status histories and SCR ownership remain missing. No-match searches are bounded. [GA15]                                                                                                                                                                        |
| Yield App Limited      | Seychelles <b>229095</b> ; insolvent winding-up effective <b>1 July 2024</b> ; August creditor meeting and December 2024 debt/distribution notices. Gazette No.7, <b>3 February 2026</b> , p 123, records strike-off <b>21 December 2025</b> ; notice begins p 119 with anomalous No.120 of 2025 label. Official <b>9 March 2026</b> court list: <b>SPC-00-CV-MA-0247-2025</b> , arising from <b>CC-0071-2025</b> , Cork/Chilton liquidators. | Court listing is no outcome. Cork Gully identifies Stephen Cork/Hadley Chilton; FRA describes recovered databases/communications. They are potential record custodians, not evidence of a GamiFi deposit, creditor claim or engagement. Separate Cayman TGT LP mandate is not Alphabit. [GA16-17] |
| Cavenwell              | Current group entities: DMCC <b>839414</b> , DIFC <b>7281</b> , Gibraltar <b>28633</b> , Jersey <b>157071</b> . UK <b>17062233</b> , incorporated <b>2 March 2026</b> : Andrew Horbury initially <b>100 ordinary £1 shares</b> , PSC at least 75%; initial directors Horbury, Christopher Mayfield, Neil Rankin, Chris Usher. NetZero biography bridges Rankin professionally to Alphabit/Cavenwell.                                          | Current personnel/entities prove no 2021-2022 GamiFi engagement, key authority or ownership chain. [GA18]                                                                                                                                                                                         |

The corporate companions preserve full deed analysis and access routes. BVI beneficial-ownership applications and Panama SSNF/RUBF are controlled processes, not public owner disclosures. Dalma's DFSA matter concerns **2016 trading in Dalma Unified Return Fund**; it is not a GamiFi finding. The obtained Helbiz order dismisses Alphabit for lack of personal jurisdiction; Robertson declarations **191/222** were identified but full text not recovered. Neither proceeding supplies a finding against Laura here. No paid search, corporate application, creditor login or external request was submitted. [GA19-20]

## 12. Exact records that would resolve the remaining questions

The chain identifies signing keys and contract outcomes. A person's name, authority, commercial entitlement and final fiat receipt require additional records. The following requests are prepared as record targets only; none has been sent.

| Record holder                            | Exact anchor in this report                                                                                                                               | Required record                                                                                                                                                                                                                                                              |
|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Gamifi Limited / relevant key custodians | BVI 2082070; vesting deployer 3e0f; f27; 538a; 6ef; 6bf; 9362; afd9; former 7e01; executor 343c; dated sections 6-8 handover/permission/withdrawal tables | Dated key-assignment register, custody/handover acknowledgments, signatory mandates and approval instructions for September 19/29, November 4/5, April 28 membership handover and September 19 membership change. Request custody documentation, not private keys/passwords. |
| Private-allocation/account custodian     | 3604 beneficiary; January 18 funding hash in section 9; archived account-wallet structures [GA07]                                                         | Allocation agreement, beneficial entitlement, actual account/KYC mapping if one exists, related onward f4f instructions and settlements. Architecture does not prove this beneficiary enrolled.                                                                              |

| Record holder                              | Exact anchor in this report                                                                                                                                                                                                 | Required record                                                                                                                                                                                                                                                                         |
|--------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Staking/replenisher custodians             | 9490 replenisher; May 9 settings and six May 15/17 receipts in section 8; 14cc funding link                                                                                                                                 | Ownership/delegation, origin and obligations of supplied funds, instruction records, reason for shortening pools, customer notices/consent and actual principal/reward settlement.                                                                                                      |
| Project accounting / withdrawal recipients | Seven receipts in section 4; ID 4 circular route; fully refunded original FOMO; matched GAMI allocations; Time Raiders retained BUSD and verified Polygon distributions/2025 backing removal; pooled 35b and 14cc movements | Accepted prices/contracts, fee entitlement, SHF refund/distribution reconciliation, recipient assignments, invoices, bank receipts and entries explaining each transfer. Avoid asking again whether original FOMO's 27 funders received their BUSD: that chain subquestion is resolved. |
| MEXC                                       | All four section 10 arrival hashes; chain 56, canonical GMI, intermediary 9564, disclosed 2e8f/4982 destinations                                                                                                            | Historical custody and deposit-address assignment; actual credits/reversals; customer authority/identity held; linked orders/fills and withdrawals; retention status. Common intermediary alone does not identify one customer.                                                         |
| FixedFloat                                 | November 5 <b>07:15:11 / 07:15:32, 5,174 BUSD</b> ; 35dc → 96f0 → 4727, full hashes in section 6                                                                                                                            | Confirm historical operator/custody first, then order/payment credit, output asset/network/amount/address/transaction, cancellations/refunds and retained customer/verification data.                                                                                                   |
| Auditor/deployment custodian               | PR 13, PR 25 and .openzeppelin/unknown-56.json                                                                                                                                                                              | Engagement, named auditor, delivered report/version, audited commit and address scope, remediation, deployment acceptance and any review of later upgrade/allowance powers.                                                                                                             |
| Avark / actual development contractor      | First-party GamiFi case study; BVI 2082070 match question                                                                                                                                                                   | Contracting legal entity, engagement, invoices/payment references, authorized contacts and deployment/access/handover records. Agency work alone does not assign signing-key control.                                                                                                   |

FixedFloat's later provider-attributed reply (**10 May 2025**) on its FAQ-linked BestChange listing calls **0x4727250679294802377dd6ca6541b8e459077c95** a main BSC outgoing address; this is later third-party-hosted attribution requiring **November 2022** confirmation. Its no-registration service may have an order/payout mapping without a named account. Current API fields from.tx.id, to.coin, to.network, to.address, to.tx.id and back define useful targets, but require authenticated order identifiers and offer no public transaction-hash search. An authorized customer's original order page/email could corroborate a match. Current schema/privacy wording does not prove 2022 records survive. Similar pooled-wallet amounts/times do not establish a payout. [GA21]

FixedFloat's support page publishes legal@fixedfloat.com for law enforcement and help@fixedfloat.com for victims. MEXC's LEORS route is restricted to eligible agency/judicial officials; current guidance describes **60-day preservation** after a formal legal request and restricted-system extensions. These descriptions establish neither requester eligibility nor historical retention. No order/account authentication or submission was performed. [GA21]

No bank document, wire reference, named bank beneficiary or verified Laura-owned receiving wallet has been established. September's CEO succession supplies chronology; it neither identifies the later keys nor independently proves or disproves involvement.

### 13. Valuation and reproducibility

For a transaction in block N, GMI marks use the GMI/WBNB pool reserves at block N-1 multiplied by the Chainlink BNB/USD answer available at that same historical block. This is the previous completed block, not necessarily the state immediately before a transaction within block N. Each row preserves its block, exact token quantity, price and source age. BUSD and BNB proceeds use their own historical USD oracle answers. BUSD is not silently treated as exactly one US dollar.

The main pool is 0x58d4b61983ca0afe6e352e90719f403e24e016f4; BNB/USD feed is 0x0567f2323251f0aab15c8dfb1967e4e8a7d42aee; BUSD/USD feed is 0xcbb98864ef56e9042e7d2efef76141f15731b82f. The [Chainlink API documentation](#) defines the decimals and historical observation timestamps used. Successful feed-identity responses and compact official-document excerpts are retained.

Canadian-dollar equivalents use [Bank of Canada daily USD/CAD averages](#), taking the previous available business-day observation on weekends and holidays. These are dated daily averages, not transaction-time FX quotes. For example, April 19 uses 1.2624 CAD/USD; November 5 uses November 4's 1.3517; December 14 uses 1.3561. The workbook shows the FX observation date separately.

Price-age limitations matter. The November withdrawal's GMI pool ratio was 15,764 seconds old; the January 20 private claim's ratio was 17,222 seconds old. One June 22 BUSD oracle answer was 79,865 seconds old. They are explicitly identified as then-available marks, not exact contemporaneous exchange fills. A large position can move a shallow pool substantially, explaining why multiplying a marginal quote can exceed actual sale proceeds. The 44m sale's actual BUSD output is therefore the relevant realized on-chain amount.

The workbook preserves exact decimal quantities in text and uses formulas for dollar columns. Spreadsheet numeric precision is limited; JSON/raw integer evidence remains authoritative for exact token units. No total adds across overlapping transfer categories. Each transaction links to its explorer page, while primary RPC receipts and historical calls are preserved in the evidence archive. Some exploratory downloads failed; error responses are not proof of missing transactions.

CAKE outputs use historical Chainlink CAKE/USD feed

**0xb6064ed41d4f67e353768aa239ca86f4f73665a1**, with identity and decimals checked. WBNB uses its redeemable BNB underlying mark while remaining labeled WBNB. LP marks use the previous block's reserves and LP supply to value the underlying position; they are theoretical position values, not additional proceeds. The first November private claim used a pool ratio 8,135 seconds old; the January coverage-crossing mark used a ratio 13,519 seconds old. Observation ages are retained in each ledger row.

The follow-up supplies 54 separately valued transfer and fee records from the bounded onward-wallet inventory. These entries track commingled-wallet activity and are not added to the earlier GMI-sale proceeds.

USDT uses its historical USDT/USD feed, not a fixed US\$1 assumption. BTCB uses an explicitly labelled BTC-underlying reference mark, not a verified BTCB market execution. The earlier dated Canadian/BVI legal analyses remain preserved as prior editions and were not revalidated or extended by this consolidation.

## Appendix A. Contract and address directory

| Role                                            | Full BSC address                           |

## Appendix B. Background source register

Original B-series links below are preserved from the earlier reviewed source reports and their PDF link annotations. The GA-series register below identifies the subsequently completed live/archive research integrated into this edition. Source page locators refer to

GAMIFI\_MASTER\_INVESTIGATIVE\_MEMORANDUM\_2026-09-06.pdf unless specified otherwise.

- **B01:** Complete February litepaper, tokenomics page 8 and allocations pages 14-15:  
<https://web.archive.org/web/20220221193850/https://gamifi.gg/gamifi-litepaper-1.1.pdf> - prior memorandum pages 4-6; GAMIFI\_MISSING\_LINKS section 5. Complete local PDF and extracted text preserved.
- **B02:** Golden Ticket offer, capture 4 October 2023:  
<https://web.archive.org/web/20231004122812/https://app.gamifi.gg/buy-nft/> - pages 5 and 11.
- **B03:** Participation thresholds announcement: <https://web.archive.org/web/20220131102740/https://gamifi-launchpad.medium.com/updated-tiers-information-99fd49d0d554> - page 4.
- **B04:** GAMI issuer release: <https://via.tt.se/pressmeddelande/3317115/play-to-earn-company-gami-lists-gamifis-first-launchpad-ido?publisherId=259167> - pages 4, 8-9.
- **B05:** May 4 validity extension: <https://web.archive.org/web/20220504011833/https://gamifi-launchpad.medium.com/new-staking-pools-launch-290e4bcc4c79> - pages 4 and 9.
- **B06:** June 29 cancellation: <https://web.archive.org/web/20220629111324/https://gamifi-launchpad.medium.com/shibafr-iend-ido-announcement-e57f229783f7> - pages 9 and 11.
- **B07:** FOMO September schedule: <https://gamifi-launchpad.medium.com/fomo-lab-ido-update-7733bd7d5693> ; distribution report <https://t.me/GamiFiAnnouncements/813> - page 11.
- **B08:** Archived January team page: <https://web.archive.org/web/20220127060611/https://gamifi.gg/> - page 8.
- **B09:** Nativz, 9 July 2022: <https://www.nativzgamimg.com/p/newsletter-09-07-22> - page 8; GAMIFI\_MISSING\_LINKS section 2.
- **B10:** Techstars partnership release: <https://www.businesswire.com/news/home/20210630005204/en/Techstars-partners-with-Alphabit-Fund-and-Launchpool-to-bring-blockchain-focused-accelerator-to-London> - GAMIFI\_MISSING\_LINKS section 2.
- **B11:** MEXC interview, original previously limited to indexed results; the limitation is superseded by the original captures in GA05: <https://blog.mexc.com/mexc-ama-gamefi-session-with-laura-and-casey/> - prior memorandum pages 8-10.
- **B12:** Episode 33:  
<https://pod.co/gamifi-everything-beyond-the-metaverse/33-a-conversation-with-gamifis-laura-walsh-and-casey-mcquillan> ; RSS <https://feeds.captive.fm/gamifi/> - pages 9-10.
- **B13:** Mystery Box article: <https://web.archive.org/web/20220703083857/https://gamifi-launchpad.medium.com/gamifi-mystery-box-nfts-2840e0eb885e> - pages 5-6, 9-10.
- **B14:** CEO succession:  
<https://web.archive.org/web/20220901114231/https://gamifi-launchpad.medium.com/new-ceo-for-gamifi-451f0e5a2147> - page 9.
- **B15:** Homepage captures: <https://web.archive.org/web/20220904205757/https://gamifi.gg/> ; <https://web.archive.org/web/20220906231901/https://gamifi.gg/> - page 8.
- **B16:** October pause:  
<https://web.archive.org/web/20221004040428/https://gamifi-launchpad.medium.com/gamifi-update-f8d6326f1780> - pages 9 and 11.
- **B17:** Yield/Launchpool corporate accounts: <https://yieldapp.medium.com/yield-app-partners-with-launchpool-provides-corporate-accounts-for-defi-projects-b70a68293245> - GAMIFI\_MISSING\_LINKS section 1.
- **B18:** Alphabit Form D:  
[https://www.sec.gov/Archives/edgar/data/1729768/000094562118000060/xslFormDX01/primary\\_doc.xml](https://www.sec.gov/Archives/edgar/data/1729768/000094562118000060/xslFormDX01/primary_doc.xml) - GAMIFI\_MISSING\_LINKS section 4.
- **B19:** November 15 litepaper: <https://web.archive.org/web/20211115123436/https://gamifi.gg/gamifi-litepaper-1.0.pdf> - page 6; archived version comparisons in evidence.
- **B20:** GAMI project page: <https://web.archive.org/web/20220328170117/https://app.gamifi.gg/projects/gami/> - page 4.
- **B21:** Time Raiders original: <https://web.archive.org/web/20220303150653/https://gamifi-launchpad.medium.com/ido-announcement-time-raiders-9e36dc1cd3ca> - page 7.

- **B22:** First recovered corrected Time Raiders body: [https://web.archive.org/web/20220810192341/https://gamifi-launchpad.medium.com/ido-announcement-time-raiders-9e36dc1cd3ca?source=read\\_next\\_recirc-----3-----8f489997\\_d0ee\\_4352\\_b7d4\\_fc093530a589-----](https://web.archive.org/web/20220810192341/https://gamifi-launchpad.medium.com/ido-announcement-time-raiders-9e36dc1cd3ca?source=read_next_recirc-----3-----8f489997_d0ee_4352_b7d4_fc093530a589-----) - page 7.
- **B23:** Last recovered project homepage: <https://web.archive.org/web/20240725004059/https://gamifi.gg/> - page 11. Adult-portal boundary is an archive observation, not a new operator attribution.
- **B24:** Initial GMI creation: <https://bscscan.com/tx/0x9fe6991e983acb627cfaeb307bcb3a0d26bedfc1ad9a7de296722c9b82b4ff08> - page 12; raw RPC evidence controls.
- **B25:** First January upgrade: <https://bscscan.com/tx/0x0ed5defdf69f72c0477452d8fbcc4d5a95e47f561ee82adcceaa5989fa84610f> - page 12.
- **B26:** January return upgrade: <https://bscscan.com/tx/0xec9679ec01f500b5be1684b6e6612fc75f1a9a7b7c52a47c9e25a9481f0e08f3> - page 12.
- **B27:** Matched token source: <https://github.com/sheandev/gamifiContracts/blob/main/contracts/Token.sol> - page 12.
- **B28:** Mystery implementation source record: <https://sourcify.dev/server/v2/contract/56/0xcd850373d573b58d2494c41f04d1fe34b965dfe?fields=all> - page 13; legal\_chain\_followup/nft\_burn\_lane.
- **B29:** Duke implementation source record: <https://sourcify.dev/server/v2/contract/56/0x1979dac9cff265bd446d08b5a162c05e417196e2?fields=all> - page 13; legal\_chain\_followup/nft\_burn\_lane.
- **B30:** Dated launch announcement: <https://web.archive.org/web/20220117125329/https://gamifi-launchpad.medium.com/fair-launch-notice-a842e1bf320c> - page 14; historical blocks and receipts in legal\_chain\_followup/trading\_lane.
- **B31:** Ghaf Capital portfolio, prior indexed-source limitation applies: <https://ghafcapital.ae/investments.html> - GAMIFI\_MISSING\_LINKS section 2.
- **B32:** Earlier Launchpool terms: <https://web.archive.org/web/20210519003035/https://launchpool.xyz/terms-conditions/> ; <https://web.archive.org/web/20220128063358/https://launchpool.xyz/terms-conditions/> - GAMIFI\_MISSING\_LINKS section 3.
- **B33:** Yield February terms: [https://uploads-ssl.webflow.com/5f3b1e7e87a54051ee78b018/6023cb387c3551136db68ec2\\_YIELD%20-%20T%26C%20-%20FEB%2010.pdf](https://uploads-ssl.webflow.com/5f3b1e7e87a54051ee78b018/6023cb387c3551136db68ec2_YIELD%20-%20T%26C%20-%20FEB%2010.pdf) - GAMIFI\_MISSING\_LINKS section 3.
- **B34:** GamiFi terms: <https://web.archive.org/web/20221007163947/https://app.gamifi.gg/terms-and-conditions/> - GAMIFI\_MISSING\_LINKS section 3 and current BVI findings.

The source locators are retained below and in the companion evidence. The separate FULL\_HYPERLINK\_TARGET\_REGISTER\_2026-09-06.md preserves that register in editable form. Archived URLs identify particular capture dates; current availability may differ.

## Appendix C. Integrated follow-up sources

These identifiers distinguish source publications from archive captures, fresh chain responses, prior evidence and derived calculations. Source records and retrieval failures are preserved in the two follow-up evidence packages. Explorer links navigate transactions; the chain conclusions rely on retained RPC receipts/calls. The integration does not treat a failed retrieval as an absent event.

- **GA01 - Official application project mapping and price versions:**  
[https://web.archive.org/web/20220921100025id\\_/https://app.gamifi.gg/projects/fomo-lab-new/](https://web.archive.org/web/20220921100025id_/https://app.gamifi.gg/projects/fomo-lab-new/) ;  
[https://web.archive.org/web/20220921100110id\\_/https://app.gamifi.gg/\\_nuxt/6e7648d.js](https://web.archive.org/web/20220921100110id_/https://app.gamifi.gg/_nuxt/6e7648d.js) ;  
[https://web.archive.org/web/20220921100142id\\_/https://app.gamifi.gg/\\_nuxt/c2c9d04.js](https://web.archive.org/web/20220921100142id_/https://app.gamifi.gg/_nuxt/c2c9d04.js) ;  
[https://web.archive.org/web/20220314145410id\\_/https://app.gamifi.gg/\\_nuxt/83c772d.js](https://web.archive.org/web/20220314145410id_/https://app.gamifi.gg/_nuxt/83c772d.js) ;  
[https://web.archive.org/web/20220328171520id\\_/https://app.gamifi.gg/\\_nuxt/5c41e54.js](https://web.archive.org/web/20220328171520id_/https://app.gamifi.gg/_nuxt/5c41e54.js) . Earlier per-project captures and exact hashes: `research/fundraising_raw/selected_archive_provenance.json`, `project_mapping_all_captures.json`, `project_dispatch_contexts.json`.
- **GA02 - Shibafriend external terms and reversals:**  
<https://medium.com/@GAGARIN.World/shibafriend-nft-sport-a-groundbreaking-sports-metaverse-b4bb12192cc4> ;  
[https://t.me/kdg\\_ann/1386](https://t.me/kdg_ann/1386) ; [https://t.me/kdg\\_ann/1389](https://t.me/kdg_ann/1389) ; [https://t.me/kdg\\_ann/1393](https://t.me/kdg_ann/1393) ;  
<https://gamifi-launchpad.medium.com/shibafriend-ido-details-e0e165279b8e> . Different venue/customer cohorts; schedules are not receipts. Acquisition records: `research_deep/fundraising_sources.json`.
- **GA03 - FOMO cohorts and project-payment source:**  
<https://gamifi-launchpad.medium.com/fomo-lab-ido-update-7733bd7d5693> ;  
<https://medium.com/fomo-lab/fomo-lab-launches-their-product-ecosystem-alongside-the-fomo-token-4c2bb577f47c> ;  
<https://raw.githubusercontent.com/sheandev/gamifiContracts/main/contracts/Project.sol> . Code/API and publication notes: `research/fundraising.md` and its source manifest.
- **GA04 - Positive development/association and bounded release observations:**  
<https://avark.agency/case-studies/gamifi> ; <https://gamifi-launchpad.medium.com/mini-games-4b383eb7b0c4> ;  
<https://www.hypesportsinnovation.com/sports-brands-we-feel-you-pain-points/> ;  
[https://store.steampowered.com/app/2410900/Time\\_Raiders/](https://store.steampowered.com/app/2410900/Time_Raiders/) ; <https://timeraiders.io/> . Steam observation: 6 September 2026; roadmap entries are representations, not acceptance logs.
- **GA05 - Recovered MEXC original:**  
[https://web.archive.org/web/20220223102542id\\_/https://blog.mexc.com/mexc-ama-gamefi-session-with-laura-and-casey/](https://web.archive.org/web/20220223102542id_/https://blog.mexc.com/mexc-ama-gamefi-session-with-laura-and-casey/) ; comparison: [https://web.archive.org/web/20221001232638id\\_/https://blog.mexc.com/mexc-ama-gamefi-session-with-laura-and-casey/](https://web.archive.org/web/20221001232638id_/https://blog.mexc.com/mexc-ama-gamefi-session-with-laura-and-casey/) . Earliest payload 128,419 bytes, SHA-256 739fcf88bca3d6041c8c121057614890baca82feed62e30090ffd8b0b9b290c2. Full acquisition metadata retained; summary does not reproduce the full copyrighted article.
- **GA06 - Independent Portuguese CEO-page captures:**  
[https://arquivo.pt/noFrame/replay/20220201190558id\\_/https://gamifi.gg/](https://arquivo.pt/noFrame/replay/20220201190558id_/https://gamifi.gg/) ;  
[https://arquivo.pt/noFrame/replay/20220503173716id\\_/https://gamifi.gg/](https://arquivo.pt/noFrame/replay/20220503173716id_/https://gamifi.gg/) ;  
[https://arquivo.pt/noFrame/replay/20220907174004id\\_/https://gamifi.gg/](https://arquivo.pt/noFrame/replay/20220907174004id_/https://gamifi.gg/) . Full capture metadata and 2024 corroboration: `research_deep/corporate_sources.json` and `fundraising_sources.json`.
- **GA07 - Membership and archived account architecture:**  
[https://web.archive.org/web/20220921100142id\\_/https://app.gamifi.gg/\\_nuxt/c2c9d04.js](https://web.archive.org/web/20220921100142id_/https://app.gamifi.gg/_nuxt/c2c9d04.js) ; SHA-256 b5c7871c8d74618c740cfefeb3c261a563073c7cba8420b1a17fa73779750cd4. Historical/state/ownership requests and receipts: `research_deep/human_raw/`; extracted character offsets: `frontend_account_nft_extracts.json`. Exact April/September transaction links appear in the authority section.
- **GA08 - Membership source-only treasury/activation lead:**  
<https://raw.githubusercontent.com/sheandev/gamifiContracts/main/contracts/MemberCard.sol> . Current repository code is not a historical implementation attestation; relevant source responses and failed deployment-source retrievals remain distinctly labelled.
- **GA09 - Historical staking principal and May settings:**  
<https://sourcify.dev/server/v2/contract/56/0x4e9fcbbbca286a5be04bdfc9a7f7babb43253e55?fields=all> ;  
<https://github.com/sheandev/gamifiContracts/blob/main/contracts/StakingV3.sol> . Exact runtime and historical proxy-slot matching, settings receipts and principal tests: `research/blockchain_raw/staking_summary.json`, `settings_summary.json`, `refill_crossing_summary.json`, `new_evidence_manifest.json`.
- **GA10 - May replenishment and further onward receipts:** primary RPC endpoint  
<https://docs-demo.bsc.quiknode.pro/> ; explicit requests, responses, headers and decoded integer calculations: `research_deep/blockchain_raw/`. All six transfer hashes and selected later swaps are printed in the narrative. Public staking offer: [https://web.archive.org/web/20220823111556id\\_/https://gamifi-launchpad.medium.com/new-staking-pool-s-a931ff7dfd6a](https://web.archive.org/web/20220823111556id_/https://gamifi-launchpad.medium.com/new-staking-pool-s-a931ff7dfd6a) . Configuration pairing is an inference; rewards are simple elapsed-time accrual despite the announcement's APY terminology.

- **GA11 - Audit scope and public catalog:** <https://github.com/sheandev/gamifiContracts/pull/13> ; <https://github.com/sheandev/gamifiContracts/pull/25/files> ; <https://api.github.com/repos/peckshield/publications/git/trees/37558e095a7c82c9f4f8db4a84af313ed5eba67c?recursive=1> . No report in this bounded path search is not proof no private engagement existed.
- **GA12 - Cayman identifiers/name history:** <https://api.gleif.org/api/v1/lei-records/213800NZCHTWXWVPWO96> ; <https://api.gleif.org/api/v1/lei-records/213800NZCHTWXWVPWO96/field-modifications?page%5Bsize%5D=100> ; [https://www.cima.ky/upimages/commonfiles/QuarterlyListofallMutualFundsregisteredandlicensedwiththeCaymanIslandsMonetaryAuthority\\_1516037823.pdf](https://www.cima.ky/upimages/commonfiles/QuarterlyListofallMutualFundsregisteredandlicensedwiththeCaymanIslandsMonetaryAuthority_1516037823.pdf) (31 December 2017, p 8); [https://www.cima.ky/upimages/commonfiles/QuarterlyListofallMutualFundsregisteredandlicensedwiththeCaymanIslandsMonetaryAuthority-30June2021\\_1625765870.pdf](https://www.cima.ky/upimages/commonfiles/QuarterlyListofallMutualFundsregisteredandlicensedwiththeCaymanIslandsMonetaryAuthority-30June2021_1625765870.pdf) (30 June 2021, p 10). GLEIF field update is not a legal effective-date certificate.
- **GA13 - Historical information memorandum:** <https://assets.getkino.com/documents/EFTA00797613.pdf> ; second identical mirror and unsuccessful stated-original retrieval are recorded under CG 25 in `research_deep/corporate_sources.json`. SHA-256 `dff3921a0989a3aad844a77ef83d336e65fc33c8187f2e67a7b87ec52fe31bd1`. Government-original provenance unconfirmed; complete PDF not republished in the focused package.
- **GA14 - Earlier offshore operator terms:** [https://arquivo.pt/noFrame/replay/20211019075925id\\_/https://launchpool.xyz/terms-conditions/](https://arquivo.pt/noFrame/replay/20211019075925id_/https://launchpool.xyz/terms-conditions/) ; [https://arquivo.pt/noFrame/replay/20220201201017id\\_/https://launchpool.xyz/terms-conditions/](https://arquivo.pt/noFrame/replay/20220201201017id_/https://launchpool.xyz/terms-conditions/) ; UK record <https://find-and-update.company-information.service.gov.uk/company/12992979/filing-history> ; secondary BVI candidate [https://i-bvi.com/company/launchpool-ltd\\_1123236](https://i-bvi.com/company/launchpool-ltd_1123236) . No primary document joins candidate 2054898 to the issuer in these terms.
- **GA15 - Panama, Linford and SCR retained evidence:** supplied formation/amendment PDFs in `PANAMA_FILES_EVIDENCE_2026-09-06.zip`; integrated deed analysis in the Panama/Launchpool master. <https://ssnf.gob.pa/Portal/> ; <https://portal.egov.gi/services/ubo> ; <https://ubosearch.egov.gi/> ; original Linford Gazette <https://eservices.gov.vg/gazette/sites/eservices.gov.vg.gazette/files/governmentandstatutorynotices/%23102%2011th%20December%2C%202018%20EXTRA.pdf> . Fresh bounded search results preserved in `research/corporate.md` and `research_deep/corporate.md`.
- **GA16 - Yield status and court file:** <https://archive.gazettes.africa/archive/sc/2024/sc-government-gazette-dated-2024-08-05-no-42.pdf> ; <https://www.seylii.org/seylii/gz/en/601/1/document.do> ; [https://www.gazette.sc/sites/default/files/2024-12/Gazette%20No%2071%20-16th%20December%202024\\_0.pdf](https://www.gazette.sc/sites/default/files/2024-12/Gazette%20No%2071%20-16th%20December%202024_0.pdf) ; <https://www.seylii.org/seylii/gz/en/2993/1/document.do> ; <https://www.judiciary.sc/wp-content/uploads/2026/03/supreme-court-civil-9-13-march.pdf> . The strike-off entry and notice header were visually checked; scheduled hearings are not outcomes.
- **GA17 - Yield records custodians:** <https://yield.app/> ; <https://www.forensicrisk.com/case-studies/yield-app> ; <https://corkgully.com/liquidators-appointed-to-yield-app-to-oversee-insolvency-proceedings/> . Public descriptions do not identify a GamiFi client account.
- **GA18 - Cavenwell group and personnel:** <https://cavenwell.io/legal-and-regulatory> ; <https://netzero.capital/neilrankin> ; <https://find-and-update.company-information.service.gov.uk/company/17062233/filing-history> ; <https://find-and-update.company-information.service.gov.uk/company/17062233/persons-with-significant-control> ; <https://find-and-update.company-information.service.gov.uk/company/17062233/officers> . Focused incorporation extract omits unrelated residential details.
- **GA19 - External proceedings with scope/disposition retained:** <https://www.dfsa.ae/public-register/firms/dalma-capital-management-limited> ; [https://www.dfsa.ae/download\\_file/3344/0](https://www.dfsa.ae/download_file/3344/0) ; <https://archive.org/download/gov.uscourts.nysd.538913/gov.uscourts.nysd.538913.244.0.pdf> . Full descriptions and failed retrieval distinctions: `research_deep/corporate.md`, CG 17-23.

 registry screenshot remains preserved at [gamifi\\_bvi\\_number/source/GAMIFI\\_BVI\\_REGISTRY\\_2082070.jpg](https://gamifi-bvi-number/source/GAMIFI_BVI_REGISTRY_2082070.jpg) . It supplies no incorporation date, officers, status or agent; the date comes from the separately labelled directory source.

## Appendix D. Current evidence gaps

The **32 stable EV identifiers** below are the GamiFi/corporate subset of the separate 54-topic register. A resolved subquestion does not close every part of its compound item. The complete 120m payout, original Launchpool funding book and original FOMO principal-refund reconciliations remain resolved. Current GAMI backing is a dated observation, not an uninterrupted history.

| ID     | Topic                                     | Current result                                                                                                                                                                                                                                                                                                                                                                   |
|--------|-------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| EV-001 | Human control of GamiFi keys              | <b>Open:</b> dated Safe, proxy, vesting, membership and project roles identified; human assignments and instructions missing.                                                                                                                                                                                                                                                    |
| EV-002 | 120m beneficiary and entitlement          | <b>Open:</b> five payouts and disposal balance reconcile; private agreement, beneficial owner and authenticated user-wallet mapping missing.                                                                                                                                                                                                                                     |
| EV-003 | MEXC customers and execution              | <b>Narrowed:</b> four disclosed-address arrivals established; historical credits, account assignments, orders/fills and withdrawals unavailable.                                                                                                                                                                                                                                 |
| EV-004 | FixedFloat historical order/payout        | <b>Narrowed:</b> exact 5,174-BUSD route and later provider attribution; 2022 custody, order and final payout mapping unproved.                                                                                                                                                                                                                                                   |
| EV-005 | Onward owners and return-payment purpose  | <b>Narrowed:</b> 12 BNB returned to beneficiary; 35b stablecoins/BNB reach earlier admin 14cc; no named owners or business basis.                                                                                                                                                                                                                                                |
| EV-006 | Cayman bank or personal receipt           | <b>Open:</b> no bank account, settlement record or personal receipt identified.                                                                                                                                                                                                                                                                                                  |
| EV-007 | Seven project withdrawals and entitlement | <b>Narrowed:</b> original FOMO fully refunded; all 127 GAMI funders allocated exactly; Time Raiders BUSD balance located and all 80 funders matched to actual initial Polygon distributions; a separate 2025 withdrawal removed remaining XPND backing. ID 4 same-amount circular route established. Accepted contracts, SHF elections and bank/business settlement remain open. |
| EV-008 | Exact GamiFi legal entity                 | <b>Narrowed:</b> Gamifi Limited/BVI 2082070 identified from screenshot and directory; official incorporation date, status, agent and owners missing.                                                                                                                                                                                                                             |
| EV-009 | Offshore Launchpool versus UK entity      | <b>Open:</b> Portuguese archived issuer terms and candidate BVI 2054898 recovered; printed-date ambiguity and UK 12992979 corporate bridge unresolved.                                                                                                                                                                                                                           |
| EV-010 | Carajo issued/beneficial ownership        | <b>Narrowed:</b> supplied deeds identify Panama folio 155733022; current issued-share and beneficial-owner registers missing.                                                                                                                                                                                                                                                    |
| EV-011 | February 2025 Panama authorizations       | <b>Open:</b> attendance, proxies, voting rights and instructions for 7 February meeting unavailable.                                                                                                                                                                                                                                                                             |
| EV-012 | Linford status/restoration                | <b>Open:</b> 2018 Gazette event identified; later restoration/material-date instruments missing.                                                                                                                                                                                                                                                                                 |
| EV-013 | SCR Advisors ownership chain              | <b>Open:</b> bounded exact-name public searches supply no verified chain.                                                                                                                                                                                                                                                                                                        |
| EV-014 | Alphabit investment/management agreements | <b>Narrowed:</b> Cayman WC-319009, LEI/licence history and historical memorandum joined; executed GamiFi agreements missing.                                                                                                                                                                                                                                                     |

| ID     | Topic                                  | Current result                                                                                                                                                                                                                         |
|--------|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| EV-015 | Transfer to new operating entities     | <b>Open:</b> no executed Panama asset transfer, contract novation or liability assumption.                                                                                                                                             |
| EV-016 | Laura's dated authority/equity         | <b>Open:</b> primary/archive roles and succession corroborated; private mandates, equity and handover records missing.                                                                                                                 |
| EV-017 | Actual Yield/adviser engagement        | <b>Narrowed:</b> Yield status/custodians and Cavenwell entities/personnel identified; no GamiFi account or engagement.                                                                                                                 |
| EV-018 | Actual fundraising and spending        | <b>Narrowed:</b> seven withdrawal counters, complete original FOMO/GAMI/SHF funding censuses and pooled 35b flows quantified. The US\$3.055m financing plan is not reconciled to actual receipts, consideration or spending.           |
| EV-019 | Accepted buyer terms/prices            | <b>Narrowed:</b> GAMI allocations match all 127 event-derived buyer entitlements; campaign versions and outside-venue terms preserved. Individual accepted contracts and additional 30-address GAMI allocations' basis remain missing. |
| EV-020 | FOMO/SHF refunds and distributions     | <b>Narrowed:</b> original FOMO's 27 funders received exact BUSD principal. SHF elections, matching repayments, token entitlements and 1,000-GMI bonuses remain open; later FOMO cohorts separate.                                      |
| EV-021 | NFT payment versus benefits            | <b>Narrowed:</b> membership handovers/account-use architecture and qualified first-come offer recovered; full payment, activation and delivered-benefit accounting missing.                                                            |
| EV-022 | Historical NFT mint/burn/reserves      | <b>Open:</b> no complete Mystery/Duke lifetime accounting; current balances/source logic do not substitute.                                                                                                                            |
| EV-023 | Staking deposits/restrictions/rewards  | <b>Narrowed:</b> historical configuration, principal snapshots, May settings and 46.02m replenishments verified; individual rewards/access/settlement incomplete.                                                                      |
| EV-024 | Statements, authors and approvals      | <b>Narrowed:</b> original dated MEXC interview authenticated against later capture; private approvals, knowledge and signed diligence records missing.                                                                                 |
| EV-025 | Buyer reliance and net exposure        | <b>Narrowed:</b> address-level delivery and outstanding-claim records are now quantified; authenticated individual reliance and net-loss accounts remain missing. Gross transfers and marginal marks are not substitutes.              |
| EV-026 | Game/NFT/integration delivery          | <b>Narrowed:</b> GAMI original-buyer allocations and current remaining backing reconciled; AvarK/HYPE and bounded game records preserved. Full advertised integrations, access and acceptance evidence remain missing.                 |
| EV-027 | Audit and deployment sign-off          | <b>Narrowed:</b> original token-audit claim and public audit-work references preserved; no actual report, covered deployment match or acceptance.                                                                                      |
| EV-028 | Material-date locations/classification | <b>Open:</b> Korean company-release provenance establishes publication reach, not operating or buyer residence or legal classification.                                                                                                |

| ID     | Topic                                          | Current result                                                                                                                                                                                                                    |
|--------|------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| EV-029 | Complete intervening Launchpool history        | <b>Open:</b> all original schedules checked and May 10-18 incoming window contains no receipts; lifetime transfers, claims, refills and user outcomes incomplete.                                                                 |
| EV-030 | Broader funding/onward inventories             | <b>Narrowed:</b> 35b nonces 0-183 all receipt-checked; selected token ledger/checkpoints reconciled; ID 4 operational funding and later return verified. Complete delegated/incoming histories and f4f nonces 76-212 remain open. |
| EV-031 | Other source obligations/token controls        | <b>Narrowed:</b> both November sources matched StakingV3; historical principal and smaller-pool replenishment restoration verified. Larger-pool shortage, individual rewards and complete controls history remain.                |
| EV-032 | Trading/liquidity and manipulation allegations | <b>Open:</b> selected swaps and pooled-wallet conversions verified; complete relevant GMI/centralized orders, counterparties and liquidity history needed before testing manipulation.                                            |

## Appendix E. New chain evidence and preservation

- **N01 - Seven withdrawals and original customer cohorts:** 63002\_BUSD\_DEEP\_DIVE\_2026-09-07.md and its accompanying source/evidence package, with exact receipt/state/source-build findings E01-E04. Controlling conclusions include the full original FOMO refund and dated Time Raiders BUSD balance. Public navigators: <https://bscscan.com/address/0x56c0cb2d047b69278f49b4759c1718436a546c7f>; <https://bscscan.com/address/0x56aa83035aea8bfeb9e395a51607cc4621649aa2>; <https://bscscan.com/address/0xd2b806f9c0352a267ce7ccf33e74d68c070d6171>. Raw receipt/call evidence controls over explorer labels.
- **N02 - GAMI buyer delivery:** onchain/gami\_delivery/SUMMARY.md, gami\_buyer\_delivery\_reconciliation.csv/.json, gami\_funding\_receipt\_verification.json, atomic\_current\_vests.json, independent\_snapshot\_comparison.json, route\_independent\_receipts.json, historical\_live\_code\_match.json, retained\_source/compiler\_inputs, chain\_raw/ and SHA256\_MANIFEST.json. Pin 120,402,387; complete 154-event funding census and 157 vest reads. Public source/deployment locators: <https://sourcify.dev/server/v2/contract/56/0x957e15b2fa377bfe35e6134411c65bd36dab9522?fields=all>; <https://bscscan.com/address/0xf1adf471918b65006bf5d8505f6df976d9873d8b>; <https://bscscan.com/tx/0x2b21af95699be3decd17d62c3c1d8da96a4d21b7f848d6d58ffd47769716c766>; <https://bscscan.com/tx/0x4a8ebee724b6bc76a07ce56c239f2f16b3f03361f558fe959dc86f55c96ffe5b>. No current-counter reading is mislabeled a complete claim-receipt census.
- **N03 - Pooled 35b inventory and sweep:** onchain/pooled35b/P00LED35B\_FINDINGS.md, signed\_transaction\_inventory.csv, selected\_token\_ledger.csv, counterparty\_totals.csv, ordinary\_inventory\_verified.json, token\_ledger\_verified.json, historical\_ledger\_reconciliation.json, high\_impact\_block\_headers.json, selected\_control\_network\_links.json, raw/ and its manifest. Index source <https://bsctrace.com/address/0x35b119730f79881dac623dc51c831c6a04cab5f3> and <https://bsc-explorer-api.nodereal.io/api/tx/getAssetTransferByAddress>; independent receipts/calls from <https://bsc-dataseed.binance.org/> and <https://docs-demo.bsc.quiknode.pro/>. Index-derived coverage is distinguished from an independent block-by-block census. Selected sweep transaction IDs: BNB 0x7d9b1d573aef0370c63c764df2c3325428238b6b0a53108957fb58cdebed167d; BUSD 0x4a0f5d61337a404788cab8d53d6e4702a2ee62cbc41142a1347965399e01f701; USDC 0x202357295230d75ff4683405feb2fde8ab8ce9de177275d61baf9c050b2d16a; 200-BNB funding 0xe3195050fc274cc6e176a82997f668fd796932c693297039e6fe1d36210b979e; conversion 0xc64dbd4a8322d5b5a4877095f1adb3e050a2ae3f7ba6cd68e141b2253ec817a1; exact USDC return 0x3f5359c3f405974a4b9e91705ecae180221c6c984bfeac800b1cde2f83f4f423.
- **N04 - ID 4 pre-funding/control:** onchain/project4\_control/PROJECT4\_CONTROL\_FINDINGS.md, funder\_prefunding\_incoming.json, operational\_chain\_independent\_checks.json, selected\_nonce/transaction\_files, chain\_raw/, SOURCE\_RETRIEVAL\_MANIFEST.json and SHA256SUMS.txt. Receipt/source-matched March methods: stake selector 0x7b0472f0, funding 0x9f5e994d, claimBack 0x7d529d72. Public locators: <https://bscscan.com/tx/0xc8d79ad08102d07abffa43ed4baa359d123cfd1cd05c1db20af73967147ef40>; <https://bscscan.com/tx/0x4a298bd4a19e7993c92d2e54651f55145330c93e8f9a2b61592b6f7a65ec7ccd>; <https://bscscan.com/tx/0x9397957fd74ccd8680e56b5c8734c1917efec4c57611bf4a59fa8705b5ce6a62>; <https://bscscan.com/tx/0x553cf2385ef6d40f35e589accd89be0129ee78ff4e1ce3edae423700ce27a288>; <https://bscscan.com/tx/0x2909ca27c96fcbe49ab6274dcc4317c0107c2b4b9bc83aa410f48e8e8448c715>; <https://bscscan.com/tx/0x80f583f1e6d13ba17984a2f06c1e23a6ce5c27d29af8003a66eae6f77d3553c8>; <https://bscscan.com/tx/0x782a3cb1e15038899222d883a233bcf031c20236ba0b8a3f8584052d799de7ae>. Later rate-limit errors constrain coverage; they prove no absent transaction or identity.

The exact dated T001-T262 financial register is a separate readable technical Markdown/CSV companion. All original row strings, order, IDs, quantities, valuations and 172 transaction hashes are preserved; the validation JSON records the comparison and SHA-256 hashes. New findings have their own dated raw evidence and receive no invented dollar marks. Earlier evidence is retained for provenance and superseded only where this edition expressly resolves a stale conclusion. Token-flow reconciliation alone does not establish theft, fraud, laundering or a final human beneficiary.

## Additional primary identifiers for printed review

These identifiers reproduce the targets of the cited links above; they add no separate evidentiary claim.

## September reward-claim source

### SEP30:

<https://bscscan.com/tx/0xd7c281417bbf9f2faaf74d48dfe6cf7a3e0bda0c396eb687036ae5d3c37f8d1b> .

Preserved JSON-RPC receipts, states at blocks 21,768,549-21,768,550, runtime comparison and independent 19-check review are the evidence; the explorer link is a lookup aid. Collection: 7 September 2026 UTC. This is a dated transition, not a lifetime reconstruction.

## Recorded NEM context sources

- **VNEM-G1:** [https://www.youtube.com/watch?v=\\_yobsgCubbQ](https://www.youtube.com/watch?v=_yobsgCubbQ) . Bit:Talk; reviewed English automatic captions. Full matrix and upload/recording-date distinction: current KidletCoin/NEM master section 2.
- **VNEM-G2:** [https://www.youtube.com/watch?v=TMhEL9\\_5TRE](https://www.youtube.com/watch?v=TMhEL9_5TRE) . Tinsman endorsement; reviewed English automatic captions. The speaker attribution is separate from Laura's own written platform, assessed in the KidletCoin/NEM master section 13.
