

GamiFi project withdrawals

Historical source edition | 7 September 2026

Public crypto research edition. The following material preserves historical analysis, source identifiers, transaction amounts and stated qualifications. Observations retain their original dates, principally 5-7 September 2026. Preparing this edition did not repeat the blockchain, corporate-registry or legal research.

Read each assertion with its cited source and limits. A public role, a wallet connection or a valid transaction does not by itself identify a human operator, prove personal receipt or establish wrongdoing. The reports distinguish findings, interpretations and unanswered questions.

Correction precedence: the 7 September 2026 ShibaFriend claims review reports repayment of the principal of all 23 non-dust funding addresses, with only 168 base units of dust unmatched. It also reports equal project matches for all 194 identified paid Mystery Box mints. Those later findings supersede earlier uncertainty about those specific questions. See [Research_Paper_ShibaFriend_Claims_Review.pdf](#).

Original source-page labels and reference identifiers are retained where useful. Gaps in numbering reflect the crypto-only scope. Historical references to companion records are locators; consult the repository inventory to see which records are included. Current availability of an external source is not guaranteed.

Contents and document control

| Consolidated review | 7 September 2026

This report integrates the complete FOMO refund match, GAMI allocations and backing, pooled-wallet history, original project4 funding route and the distinct 2025 Polygon event. It separates token movement, customer settlement and human authorization.

What the seven withdrawals represent	3
Original FOMO: full principal refunds	3
GAMI: buyer allocations and remaining backing verified	4
Time Raiders: BSC cash and Polygon tokens	4
Pooled wallet 35b1: cash accounting and the August sweep	6
Project 4: funding circuit and receiver reassignment	7
Control, attribution and remaining records	7
Evidence coverage and detailed schedules	8
Exact withdrawal ledger	8
Full address register	9
Public sources and decisive transactions	10
Additional primary identifiers for printed review	12

Consolidated findings through 7 September 2026. Times are UTC; BSC means BNB Smart Chain, chain ID 56. GAMI, GMI and Polygon XPND are distinct tokens and must not be combined.

What the seven withdrawals represent

The 63,001.817377359365034843 BUSD subtotal is not a proven theft or unpaid-loss figure. Original FOMO principal was fully refunded; every original GAMI funding address has its exact recorded token allocation, with remaining allocations fully backed. Other settlement and custody questions remain specific and unresolved.

Campaign / project	BUSD, rounded	Established outcome
Original FOMO /8	3775.23	Full principal returned to all 27 original funding addresses.
GAMI /6	28421.14	All 127 original funding addresses match funded vesting allocations; 30 additional allocations need entitlement records. Cash entered pooled wallet 35b1.
Time Raiders /7	23722.72	An exact matching BSC BUSD balance was located at the original recipient. Polygon token history is assessed separately below.
Shibafriend /9	4720.23	Cash entered 35b1; participant elections and fulfilment remain unresolved. Two SHF token versions now have further distribution leads.
Unidentified /1,3,4	2362.50	362.50 paid to owner/caller 8fea; project 4's 2000 follows a documented operational funding circuit and recipient change.
Total	63001.82	Seven campaign withdrawals, 10 March-22 June 2022; separate from November's 44 million GMI removal.

Original FOMO: full principal refunds

The original delay notice promised refunds; its publication metadata is 23 May 2022 03:21:19.809 and its Wayback capture 13:00:44. Official post 555 repeated the promise at 14:24:52. Actual transfers establish fulfilment for this cohort. [P01-P02; E03]

23 May 2022 UTC	Movement	Exact BUSD
11:50:16	Project→56aa	3775.228767123287671432
11:56:31	56aa→administrator 3e0f	3775.228767123287671432
15:23:53	Batch contract pays 2 original funders	23
15:37:05	Same contract pays 25 original funders	3752.228767123287671432

All 34 contributions from 27 addresses match the 27 payouts address by address and to the smallest token unit. No contributor or amount is unmatched. The intermediary 4867 is a batch contract, not the final beneficiary. The complete configured funding window was recovered; all 34 funding receipts and both payout receipts were independently checked. Refunds finished 3 hours 46 minutes 49 seconds after withdrawal. The full comparison is in `fomo_funding_payout_reconciliation.csv`.

This resolves original contract project 8 principal. It does not resolve the later version 2 FOMO relaunch, staking, NFT purchases or separate losses.

GAMI: buyer allocations and remaining backing verified

The complete funding census recovered 154 events from 127 addresses, totalling 28,421.141280969119319259 BUSD. Each event also records its token allocation: their sum is **284,211.41280969119319259 GAMI**. Every address and aggregate allocation matches the March 28 vesting setup exactly. This uses actual event allocations rather than assuming that the advertised \$0.10 price proves accepted legal terms. All 154 funding receipts passed independent BUSD-transfer checks. [E08; P06-P07]

On 28 March at 10:07:05, 56aa sent 555,555 GAMI to 3e0f. At 11:38:29, 3e0f transferred all 555,555 into published distribution endpoint 0xf1adf471918b65006bf5d8505f6df976d9873d8b, creating 157 allocations: 10% initial, zero cliff and 270-day linear vesting, maturing 23 December 2022. The second transaction is [4a8ebee7](#). Its historical implementation independently recompiles to the exact 4,895-byte deployed runtime. [P13]

At block 120,402,387, 7 September 2026 00:57:54 UTC:

Allocation group	Addresses	Allocated GAMI	Recorded claimed GAMI	Remaining GAMI
Original funders	127	284211.41280969119319259	173544.016373193397146791	110667.396436497796045799
Additional addresses	30	271343.58719030880680741	91221.977804806657993183	180121.609385502148814227

The actual contract balance, **290,789.005821999944860026 GAMI**, exactly covers both groups' remaining amounts. All original allocation amounts remain unchanged, all schedules are mature and the token is not paused. Among original funders, 53 have fully claimed, 62 partially claimed and 12 have no recorded claim. An atomic snapshot was independently reproduced through another provider. These are claim counters and funded allocations, not a complete individual-claim/onward-wallet census.

The 30 additional addresses are absent from the complete ID 6 funding census. Their near-equal allocations consume the remainder of the 555,555-GAMI deposit without reducing the 127 funders' entitlements. All 30 have partially claimed. Their consideration, entitlement and purpose remain unidentified; reviewed publications do not explain this specific allocation. This is a records question, not proof of theft. See the 157-row `gami_buyer_delivery_reconciliation.csv`.

Time Raiders: BSC cash and Polygon tokens

The 18 March 2022 withdrawal paid 23,722.715761539594859905 BUSD to d2b8, whose preceding BUSD balance was zero. At BSC block 120,394,077, 6 September 2026 23:55:32, its balance equalled that payment exactly; three providers agreed. Block hash:

0x779aaa476a63ca5f06ca65989f33617ab4851f24970f9114a9182c6cbba8b809. [E04]

Its two ordinary signed transactions were a 286,013.071750000025796608-GMI transfer on 24 January 2022 and a 0.03854508-BNB transfer to f4f8 on 4 November. Neither transferred or approved BUSD. This establishes a dated asset balance, not continuous non-movement, human ownership, key access or commercial entitlement.

First-party records specify BSC funding and Polygon delivery, initially scheduled for 18 March 2022 12:30 with later claims. [P03-P05]

Time Raiders: delivered tokens and a separate 2025 withdrawal

The original BSC offering and the later Polygon event must be assessed separately. A complete six-query funding census identifies **111 contributions from 80 addresses**, totaling **23,722.715761539594859905 BUSD**. Every address matches a Polygon allocation at the contract's **0.022 BUSD/XPND** rate, with integer rounding applied to each contribution. All 80 received actual initial XPND transfers on **18 March 2022**.

The published Polygon vesting contract held **149 allocation records**. Initial distributions plus **437 successful later claims** match every address's historical claimed counter exactly; three other indexed claim calls reverted. Immediately before the 2025 upgrade, **107 addresses** still had tokens outstanding, including **38 of the original 80 BSC funding addresses**. The other 42 original funding addresses had received their full allocations.

Group	Allocated XPND	Actually delivered XPND	Outstanding before upgrade
Original 80 BSC funding addresses	1,078,305.261888163402722904	634,523.415691679492334646	443,781.846196483910388258
Other 69 allocation addresses	2,330,785.738111836597277096	1,261,989.920557900869328958	1,068,795.817553935727948138
All 149 records	3,409,091	1,896,513.336249580361663604	1,512,577.663750419638336396

These amounts were mature under the original contract's rules: the schedule ended **14 September 2022 at 12:37:03 UTC**. At Polygon block **78,964,530, 13 November 2025 11:39:06 UTC**, the total outstanding amount exactly matched the contract's XPND balance. The original implementation was independently recompiled to its complete **4,960-byte deployed runtime**. The per-address ledgers and receipt reconciliation are preserved in the `timeraiders_delivery` evidence folder.

On 13 November 2025, the following sequence removed and sold that entire balance.

UTC	Action	Primary transaction
11:37:26	A transaction sent by 4d96 to 3e0f replaces 3e0f's existing code delegation and transfers ProxyAdmin ownership from 3e0f to 4d96.	Delegation and ownership
11:39:08	4d96 uses its new upgrade authority to replace the vesting implementation.	Implementation upgrade
11:40:16	4d96 withdraws 1,512,577.663750419638336396 XPND to itself . Contract balance becomes zero.	Token withdrawal
11:46:10	4d96 sends the full amount through a 1inch swap and receives 325.142524926446493136 native POL gross .	Swap and native payout

The recipient held zero XPND before the withdrawal, the exact withdrawn amount before the swap, and zero afterward. The final POL payout is established by native-system transfer logs and a balance reconciliation. Its balance rose **325.048546292010275756 POL**; adding the swap's **0.09397863443621738 POL** gas fee reproduces the gross payout exactly. Earlier transaction fees are separate. Intermediate USDC, WBTC and wrapped POL are steps in that one route, not additional proceeds. The separate **3,781.44415937604909584 XPND** split within the route has not been assigned a contractual purpose. Neither the original offering price nor these intermediate amounts establish customer damages.

Control explains how this was possible. Ordinary vesting ownership changed from 3e0f to f27f on **29 September 2022**, but the separate ProxyAdmin upgrade authority remained with 3e0f at that date and immediately before the November 2025 change. Transferring ordinary ownership did not itself transfer upgrade control. A post-upgrade `owner()` call reverting does not prove earlier allocation storage was erased.

The 2025 transaction contains an **EIP-7702 authorization**. Independent signature recovery by two methods identifies **3e0f** as its cryptographic authority. The signed tuple authorizes a chain, code target and nonce; it does not itself sign a commercial mandate or the explicit ownership-transfer instruction. The outer transaction sender was **4d96**. The evidence proves address-level delegation, not who used the key, what they understood, whether access was compromised, or whether the transaction had legitimate business approval. It replaced an existing delegation rather than creating the address's first delegation.

Polygon role	Full address
XPND token	0x03f61137bfb86be07394f0fd07a33984020f96d8
Vesting proxy	0xcfb37488ee5ebbadf9b879c05d318beb7b85f6a5
ProxyAdmin	0x7ece517ee810f95f540c0ebdbdb09c4ae3d64720
Original deployment / upgrade authority	0x3e0f4c7bdbf9bcc4aa9f22b3d03048b3ef2d7199
Ordinary vesting owner before upgrade	0xf27f9a2eb9b2c70d32476cf9dc2d74ca4e61c27b
New implementation	0xd346309df75eb6832bdc90dd8ba3b8e0264c97e3
New controller / withdrawal and sale recipient	0x4d96f2d2143dd74a96d015a70953a5686fa6ed55

Assessment: this is documented removal and sale of tokens that exactly backed mature, unclaimed contract allocations. It is a specific adverse event with identifiable affected addresses. The record does not yet establish the human responsible, informed authorization, later migration or compensation, or the final economic loss. Explorer phishing labels are third-party annotations and are not the basis for that conclusion. Laura is not identified as a signer or recipient; a November 2025 event cannot explain her September 2022 departure without separate connecting evidence.

The **23,722.715761539594859905 BUSD located at d2b8 on BSC** is a different asset on a different network. The Polygon finding does not establish that this BUSD was stolen or settled to a bank. Current zero XPND backing is separately pinned at Polygon block **93,358,017, 7 September 2026 00:47:39 UTC**; continuous intervening balances were not fully queried.

Sources and reproducibility: timeraiders_delivery/SUMMARY.md, original80_bsc_funder_delivery_ledger.csv, all149_buyer_delivery_ledger.csv, claim_receipts_verified.json, authorization_recovery.json and timeraiders_review/REVIEW.md. Fresh decisive-receipt checks used the same successful Polygon RPC provider; arithmetic and local signature recovery were independently performed. The claim census is all 440 explorer-indexed ordinary claim calls reconciled to all 149 records, not an unrestricted internal-call census. Primary technical sources: [EIP-7702](#), [1inch deployment list](#), [Polygon system contracts](#) and [Polygon native-transfer event schema](#). Issuer token identification: Time Raiders XPND guide.

Pooled wallet 35b1: cash accounting and the August sweep

56aa forwarded 28,421.141280969119319259 BUSD for GAMI on 17 May and 4,720.231567727363184247 for Shibafriend on 22 June. Both entered 35b1, whose respective preceding balances were 183,169.2800000000000000012 and 131,015.421280969119319271 BUSD. Project 4's 2000 had entered against 283,305.2800000000000000012 BUSD. 56aa had zero BUSD before each of its three campaign receipts; all ten ordinary signed transactions were recovered. Matching the next outgoing amount from pooled 35b1 cannot identify a particular campaign's fungible proceeds. [E03, E05, E09]

The repository MemberCard source names 35b1 as treasury, but that revision has not been matched to its historical deployment. This source association does not identify a legal owner. [P09]

The expanded inventory covers all 184 successful signed transactions, nonces 0-183, from 29 November 2021-7 November 2022, and 301 independently receipt-verified token events for BUSD, USDC, GMI and two SHF contracts. Its BUSD ledger matches eight historical balance checkpoints. External BUSD inflow/outflow each total 634,245.652848696482503518; USDC inflow/outflow each total 1,360,439.274293674825498827. A 2000-BUSD self-transfer is excluded from external totals. Both stablecoin ledgers close at zero, as does native BNB at pinned block 120,402,767. These are pooled turnover figures, not new fundraising or losses.

On **3 August 2022**, 35b1 sent administrator address 14cc **390.50307622 BNB at 15:50:04, 26,626.652848696482503518 BUSD at 15:53:16** and **2302 USDC at 15:53:34**. The BUSD and USDC payments exhausted their respective balances; native value plus gas reconciles the BNB balance. 14cc supplied 3 BNB between those payments. On 4 August, 14cc supplied 200 BNB, 35b1 converted it to

60,439.274293674825498827 USDC and returned that exact amount to 14cc. The return is not another independent fundraising diversion. [N1-N6]

Earlier receipts include 650,000 USDC each from 87055 and ab2e in November 2021, 399,990 BUSD from 93cf in January 2022, and recurring payments to several counterparties. The largest repeated stablecoin recipient, e602, received 246,171 BUSD and 185,750 USDC. Full addresses, test/main payment splits and recurring schedules are in `token_ledger_verified.json` and `repeated_counterparties.json`; no investor, employment or vendor identity is inferred.

35b1 also sent 20,000 BUSD to private-route onward wallet f4f8 on 30 May 2022, before that wallet's later private-allocation proceeds. Its September/November BNB exchanges link f4f8 and April Launchpool funder 78d09. These establish operational connections, not common human ownership. [E09]

Shibafriend choices and two token versions

The 29 June cancellation notice offered private SHF allocation plus 1000 GMI or a refund; individual elections are missing. The withdrawal preceded that notice by seven days. All 27 funding events from 26 addresses reconcile to 4,720.231567727363184247 BUSD. Their comparison with 35b1's ten BUSD payments on 27 June, totalling 39,970, produced only two address overlaps and no exact amount matches: d2d6 contributed 100 base units and received 600 BUSD; e5d5 contributed 1243.781094527363184079 and received 4050. This is not a verified refund schedule. Administrator 3e0f signed no ordinary outgoing transaction after the 22 June withdrawal block until 5 July; another payer, delegated transfer or later refund remains possible. [P08; E03-E05]

New receipts trace distinct SHF versions: 0x96bad480691fee450598f3a6c144f09fa5df950d supplied 85,733.882037037 tokens through 35b1/3e0f in July, then to 74f7 on 25 August. Token 0x2d4df8a0e975e15ea443933affb27afe9395e2a8 supplied 9,259,259.2592 on 24 August; the next day 9,166,666.666608 went to 74f7 and 92,592.592592 to 3643, a 99%/1% split whose purpose is unassigned. Neither destination is an original ID 9 funding address; an intermediary distribution remains possible. Participant elections, token-version terms, onward deliveries and promised 1000-GMI payments remain unresolved. [E09]

Project 4: funding circuit and receiver reassignment

Project 4's sole contributor 391a obtained 10,000 GMI and 1 BNB from 35b1 before its first signed transaction on 11 March. The GMI had reached 35b1 from 3604, beneficiary of the 120 million GMI private vesting allocation. At 10:52:07, 35b1 sent 2000 BUSD to 3604; at 10:54:34, 3604 sent 2000 to 391a; at 10:55:04, 391a contributed 2000 to project 4. Its `claimBack(4)` returned the 10,000 GMI stake at 11:55:43. That function did not refund BUSD. [E10]

On 23 March, owner 3e0f changed project 4's receiver from its earlier configured 8fea destination to 35b1 at 14:56:37, then withdrew 2000 BUSD there at 14:58:07, using consecutive nonces 117-118. The same-amount circuit is established at address level; it does not identify unique units after mixing, prove testing, or establish that outside customer money was stolen. The purpose, authorization and contributor relationship remain unknown. The 100-GMI onward payment on 29 March and 9,900-GMI return to 3604 on 6 December are individually preserved, not a complete intervening history.

Projects 1 and 3 paid 252.50 and 110 BUSD to owner/caller 8fea. Project 1 had six funding events from four addresses; project 3's two funders are also in project 1, and all three small projects used 300-block funding windows. Their names and commercial purposes remain unidentified. [E01-E02, E06]

Control, attribution and remaining records

The seven calls used the designed `withdrawFunding` function, paid the recorded funded total after the configured end and changed the withdrawal flag. The March and May/June implementations independently match all 14,983 and 15,877 runtime bytes. Historical owners were 8fea for projects 1/3 and 3e0f for 7/6/4; May/June calls used enabled administrator 3e0f while 14cc was owner. Valid technical roles do not establish human identity or commercial authority. [E02; P10-P11]

All seven withdrawals preceded Eleanor Rooney's 1 September succession announcement. Laura's named GAMI endorsement establishes promotion, not custody or instructions. No dated key assignment, authenticated instruction or personally attributed receipt establishes her involvement in these payments. [P06, P12]

The remaining records are: dated signing mandates; project 4's purpose and receiver-change instruction; issuer settlement for GAMI/Time Raiders; entitlement of the 30 extra GAMI allocations; Shibafriend elections and deliveries; and 35b1/14cc accounting for the August sweep and recurring recipients. Bank receipts matter where fiat conversion or bank settlement is claimed. Crypto refunds, funded allocations and token payments require their own evidence and must not be treated as absent merely because no bank receipt exists.

Evidence coverage and detailed schedules

Evidence	Packaged records
E01	chain/seven_withdrawals_verified.json and chain/root_raw/: exact original receipts, logs, calldata and timestamps.
E02	chain/contract_review/: historical roles/recipient state, both exact code matches, project 4 and small-project records.
E03	chain/recipient56aa/: ten signed transactions, FOMO funding/refund CSV and independent checks, SHF census/comparison.
E04	chain/recipientd2b8/: pinned BSC balance, ordinary signed history and bounded administrator checks.
E05	chain/35b_historical_balances.json, chain/35b_shf_window_verified.json and raw records: pooled balances and selected payments.
E06	chain/id1_funding_logs.json: full project 1 funding window.
E07	analysis/status_corrections.json, analysis/source_register.json, analysis/prior_project_mapping.json: historical classifications, locators and version-checked names; this report supersedes outdated outcome classifications.
E08	onchain/gami_delivery/: exact 157-row allocation CSV, funding receipts, source match and atomic balance/claim snapshot.
E09	onchain/pooled35b/: full signed inventory, selected token ledger, receipt checks, recurring counterparties and balances.
E10	onchain/project4_control/: funding circuit, decoded actions and independent checks.

For BSC, public historical state used QuickNode and independent receipts/state used Binance and Defibit. Polygon provider limits are described in its separate section above. The expanded 35b1 token index was independently matched to receipts and balance checkpoints, not represented as an every-block census of internal/allowance activity. GAMI claim counters are distinct from individual Claim receipts. No transactions were broadcast and no third party was contacted. Full donor/allocation tables remain in the referenced CSVs.
