

Research Paper: Kaskade, MegaFans and Cardano

Public crypto roles, campaign accounting and delivery records. Historical research as of 7 September 2026 UTC.

This edition reproduces the public crypto analysis and its qualifications from the 7 September 2026 research record. Observations, collection failures and verification statements below describe that historical work; this publication does not claim a fresh live-source or blockchain recheck. Figures must be read with their stated dates, units and coverage limits.

1. Findings and attribution

Kaskade's reused trading capital and concentrated rewards are documented in the historical record. MegaFans' Launchblock payment principal, successful claims and final sale inventory are reconciled. Cardano program delivery is supported. These are distinct findings about separate operators; they do not identify Laura Walsh as a wallet controller or establish shared responsibility.

Area	Supported result	Principal remaining question
Kaskade / Liquity	66 swaps reuse 30,500 USDC across nine wallets; 28 claims / 11 addresses received 23,561.836668013601357824 LUSD	Accepted scoring rules, complete campaign records and human control
MegaFans / Launchblock	6,025 USDT = 5,000 refunded + 1,025 owner proceeds; 8 claims / 4,007.949016680484308333 MBUCKS; final inventory reconciled	Accepted expiry/allocations, off-contract settlements, onward use, staking/buybacks and other venues
MegaFans publications/apps	Forecast and tokenomics arithmetic defects; exact NFT audit commit and historical policy ID recovered	Approved buyer versions, production/source matches and actual data flows
Techstars / Cardano	Approved milestones support delivered grant program	Measured later outcomes; a diverted-grant allegation is not supported

Gross turnover, reused principal, rewards, fees, company revenue, entitlements and realized losses are different quantities and cannot be added.

Laura Walsh's documented public connections

Date / period	Source and scope
July 2021	Launchpool AMA names COO and attributes eligibility/allocation-policy answers, including investment/incubation risk warnings [L1]
May 2022 onward, self-reported	MegaFans adviser/early seed investor; executed equity, compensation, executive authority and forecast authorship unverified [L2]
November 2023-March 2024, self-reported	Kaskade CMO/founding-team tenure; 8 March 2024 interview corroborates role, not exact departure day [L2; K1]
19 February 2024	Techstars names a 2023 All-Star Mentor [L4]
Late-2025 cohort, report 27 February 2026	Cardano Founder Catalyst mentor, p32; no new 2026 appointment or grant authority established [T3]

Syndika's welcome in her repost supports historical membership, not a verified current assignment; no distinct misconduct finding emerged. The record does not assign Laura the Kaskade keys/scoring or MegaFans errors. No Gotbit connection was established. [L5]

2. Kaskade: campaign chronology and terms

Date	Preserved event
4 March 2024	Earlier issuer Redacted announcement: three-week campaign, up to \$30,000 rewards and activity-based rebate chances; final dates/rules to follow [K13]
11 / 13 March 2024	Financing release names over forty investors, targets August MVP and advertises gas rebates; separate rebate notice gives activity/chance language without a complete formula or settlement list. Proceeds/instrument/valuation undisclosed [K2; K10]
16 March 23:11:32 / 18 March 17:41:47 UTC	Arquivo.pt Join Us capture -> Wayback Launch App capture with different Next.js build; entry-point change, not accepted terms or ownership evidence [K11]
18 March-7 April 2024	Company-reported Redacted campaign [K5]
10 April 2024	DeFi Collective announces Liquity incentives and separate LP support [K3]
18-22 April 2024	Verified 66-swap path [E1]
2 / 27 May 2024	Partner criticism / issuer retrospective describing economics and multipliers [K4; K6]
May / July archives	Frontend/backend record map recovered [K12]
26 August / 28 September 2024	Scroll confirms live launch; later points guidance exceeds displayed token-conversion conditions, with accepted historical version unresolved [K7-K8]
5 September 2026	Former domain redirects to sale page advertising \$100 USD; owner/change date/alternate service/corporate status unverified [K9]

A never-launched allegation is contradicted by Scroll's announcement. Seed/pre-seed labels alone do not prove inconsistent financing. Laura's month-only departure permits possible March overlap; April-May Liquity activity follows the reported departure month.

For 10 April-1 May, the issuer reports \$12.02m routed volume, \$5,601 LP fees, 47 traders and \$30,000 trader incentives: 18.67% direct fee recovery, \$24,399 difference. Separate \$20,000 LP support makes \$50,000 combined support, not fundraising. These are reported campaign metrics, not audited company profit/loss; indirect arbitrage benefits were unquantified. [K3; K6]

Launch descriptions alternate 30 days/three weeks and 10,500/10,000 weekly LUSD. The retrospective describes three 10,000-LUSD epochs, qualifying frontend USD volume and 1.1× above \$10,000, 1.2× above \$50,000, 1.3× ceiling, omitting the final threshold and boundary/rounding rules. Final accepted rules, cutoffs, exclusions and Merkle approvals remain needed. 84.3% concerned the displayed top ten's volume, not all campaign volume. The path has 66 swaps versus 65 leaderboard transactions, with one wallet causing the difference; screenshot timing/eligibility/epoch boundaries remain unresolved. Announced rebates cannot enter net profit as verified payments.

Preserved backend map

Frontend project ghqbbfbfbuhxhkwxpklf.supabase.co calls get_participation_for_all_epochs for campaign/epoch/wallet, points, transaction count, point share and volume; related functions provide totals, daily volume, claimed/unclaimed amounts and recent claims. weekly_epochs retrieves Merkle roots. The public campaign-list read returned 502; a targeted archive query returned no rows. No private table was queried or changed. These are retrieval limits, not deletion evidence. The successful bundles supersede the earlier blanket archive gap while preserving three failed chunk retrievals in the log. [K12; E5; E8-E9]

3. Kaskade: principal reuse and reward accounting

Ethereum, 18 April 2024 17:32:47-22 April 2024 21:23:23 UTC. All 65 next-input links match prior outputs; eight wallet changes use ten transfers, including two relay handoffs. Full addresses and receipts are in E1.

Wallet prefix	Swaps	Segment input	Segment output
68d3D886	6	30,500 USDC	30,445.154564 USDC
425e16a8	6	30,445.154564 USDC	30,390.407716 USDC
4E958Cb8	12	30,390.407716 USDC	30,281.192454 USDC
cfC2F1b6	9	30,281.192454 USDC	30,207.867080991279108779 LUSD
9D383C16	13	30,207.867080991279108779 LUSD	30,081.967794 USDC
9B0547b6	6	30,081.967794 USDC	30,027.861638 USDC
52AfBA24	8	30,027.861638 USDC	29,955.871705 USDC
7737E76f	4	29,955.871705 USDC	29,919.949883 USDC
97592b48	2	29,919.949883 USDC	29,902.00513 USDC

Inputs sum to 1,993,826.456664144632875365 nominal stablecoin units: about \$1.994m / 65.371359× if each USDC/LUSD is valued at \$1, from \$30,500 principal. Endpoint decline is 597.99487 USDC before gas: 0.166844023287208029 ETH for swaps and 0.006298926931151368 ETH for handoffs, excluding other approvals/claims/funding costs. These were real pool swaps; exact continuity proves capital reuse/coordination, not exclusive balances, unique fungible-token units, human identity or common beneficial ownership on both sides. [E1]

Resolve anchors at <https://etherscan.io/tx/> plus hash:

- First swap: 0xbb69337c999f054cf88427b031e4a9e84a9977854f75d6608f07076609da2ebc
- First handoff: 0x1ec509dccce7fabcbfcd3a08e41eede99e88f658dff2c5374acf2fa8fd86bd9
- LUSD handoff: 0xdfae4f391d2451cf88237717943caaa0a73ac57c203e0258512f8ba1a73feb52
- Final swap: 0x3fc1f64fc1d6413e2a4e60bb7bab65e91f9bc3590f59846ed6bbd64352ee8a38

The partner-linked spreadsheet identifies collector/funder 0x3ac0030aaaf5962b94f5a0b0c2886cc810e8caf and upstream lead 0x68ad2081e976d0e787d08e151cd9238a824b9c3a. Exact-address searches supplied no reliable human attribution. The partner calls the conduct wash trading and the spreadsheet infers one trader; those characterizations remain attributed. [K4; E8]

Claims, forwarding and corrected collectors

Distributor: 0xC1EBB8CE7121069A1208ABd4744C717CA7Ce015B. Dates/distributor/leaderboard agreement support campaign attribution; receipts alone contain no brand label. Percentages below use the announced budget, not a reconstructed all-participant payout total. [E1-E3]

Date	Original nine-wallet sample	LUSD	Announced epoch share
17 April 2024	8 claims	3,968.390622853786468352	39.683906%
24 April 2024	9 claims	8,285.027398394077806592	82.850274%
1 May 2024	9 claims	9,691.360194245855019008	96.913602%
Total	26	21,944.778215493719293952	73.149261% of 30,000

Twenty-three forwards exactly match preceding claims. Two outside 17 April claimants received 807.403300464772513792 and 809.65515205510955008 LUSD, then sent them to 425e16a8 60 / 36 seconds later. Together with the original eight claims, they exactly explain its 5,585.449075373668532224-LUSD conversion. Their eligibility/prior trading remain unreconstructed. [E2-E3]

On 24 April, 4E958Cb8 sent 8,285.027398394077806592 LUSD to 3ac0030a, received it back 108 seconds later, converted it 48 seconds after return to 8,280.806398 USDC, then forwarded that USDC to 3ac0030a. Return hash: 0xe537e084ff562ffe638015c9a1af38f5d911a9f914068b36a839cbfbfc5fee3a. Count this once. On 1 May, two conversion tranches consumed exactly 9,691.360194245855019008 LUSD, returning 9,677.173397 USDC; they were not one simultaneous balance. [E1-E2]

Combined trace: 28 claims / 11 addresses / 23,561.836668013601357824 LUSD, 78.539456% of the announced budget. Extra claims do not expand the full trading audit to eleven wallets; gas, rebates and outside flows prevent complete net-profit calculation.

Nine normal-account inventories contain 480 rows / 421 distinct hashes, all 11 April-1 May 2024. Decoded selection: 326 disjoint receipts = 235 swap-like + 26 claims + 65 outgoing stablecoin transfers. Swap-like calls comprise 231 stablecoin swaps, three ETH-related calls, one bridge. 202 exact links form 24 multi-swap paths / 226 swaps; input sum 8,435,475.413649440517362840 includes reward conversions and unresolved website attribution, not a measured artificial-volume total. Three inbound follow-ups and two extra claims bring reviewed receipts to 331. Independent QA checked the 66 swaps/65 links/ten

handoffs and corrected ETH-related count from two to three. Normal-account lists omit externally initiated incoming tokens. [E1-E3]

Redacted remains a separate, incomplete campaign

The 26 April 2024 issuer retrospective reports 18 March-7 April, three 24-BTRFLY epochs / 72 total, \$21,393 incentive value, about \$3.2m turnover / \$32,000 fees. It attributes 45% of trades / 26% of volume to 191 of 1,380 traders, implying 5.09× remaining traders' average frequency, not a wash-trading rate. The fee figure is exactly 1% of turnover, not independent corroboration. [K5; E4; E8]

Verified Uniswap V3 WETH/BTRFLY V2 1% pool: 0x3e6e23198679419cd73bb6376518dcc5168c8260; factory creation hash 0x6d666d1fd4e502da1704748dbaa687d8a85e47943c9452601d0436b9bd2a881b. Pair/venue/fee support the campaign mapping as inference; router use does not prove frontend origin. No campaign swap census was completed. Later 3 May CoW settlement and unverified candidate ending 0d37a2 are excluded. [E4]

Accepted rules and responsible actors remain necessary for a rule-violation or deception conclusion. Openly advertised rewards alone do not prove deception. No reviewed record establishes a coordinated pump, insider dump, paid market-making mandate, unchanged beneficial ownership across a security trade, or Laura's trading instructions.

4. MegaFans: financial publications and separate offerings

The complete deck has a 2024 cover, source metadata April 2025, unknown first circulation; PDF pp6,15,18 were visually checked. Forecasts are USD millions, not realized earnings. [M1]

Forecast	Displayed calculation	Calculated	Printed
Year 3 net income	15 - 13	2	4
Year 3 ending cash	0 - 13 + 13	0	17
Year 4 ending cash	17 - 25 + 25	17	47
Year 5 ending cash	47 - 45 + 0	2	50

The financing dash is treated as zero; omitted lines could explain balances but no reconciliation appears. Page 6 targets 100m users in 2026; p18 10m in 2026 / 100m in 2028. These are publication defects, not proof of falsified realized accounts or trading volume.

The Q1 / Q2 2022 tokenomics, captured 1 February 2022 03:12:54 / 24 September 2022 23:13:56 UTC, each allocate 100m tokens, including 1m public / 500,000 initial public release. Public price/target changes \$0.15 / \$150,000 -> \$0.20 / \$200,000; seed/strategic/private remain \$0.04/\$0.06/\$0.08. Initial components 1.5m + 0.5m + 1m + 0.5m + 1m + 1.5m + 2.5m = 8.5m, versus printed 7.75m, a 750,000-token gap. Public-price valuations printed \$1,162,500 / \$1,550,000 follow 7.75m; components give \$1,275,000 / \$1,700,000. Approval/accepted buyer versions remain missing. [M9-M10]

The May 2022 whitepaper describes planned \$3m seed + \$2m public token/NFT funding, claims 500,000 installs, 50,000 monthly P2E entries, \$0.55 ARPU, and discusses commercial player-contact/segmentation data. These are issuer assertions, not audited receipts or proof of data sales. [M11]

Republic reported withdrawal/refunds; it is not a completed raise. The page displays \$400,000, while the 25 June 2024 Reg D PPM specifies 400,000 tokens × \$0.10 = \$40,000. Missing Reg S terms leave offering scope unresolved. Delivery differs 30 days after final processing in the PPM versus three days in the

purchase form; one-year unlock wording varies release/purchase dates. Express priority clauses exist and must govern the executed agreement. Allocation categories total 100m; 45% reserve / 19m incentives need overlap clarification. Commonly owned California Inc./BVI Ltd. entities and founder control are disclosed, though issuer/legal-form labels vary. No individual refund ledger or Laura control/receipt/authorship is established. [M2-M4]

5. MBUCKS: sale settlement and delivery

BSC token: 0x3638fea0c645b1aa79db706fab6e8a761385c390. Launchblock links non-proxy sale 0x8d43Bdd99DB5a36ccb64f868f80Aa51B53FbcF4C. Sourcify gives exact creation/runtime match for contracts/Sale.sol:Sale, Solidity 0.8.20; source credits Liteflow.com, licence None. Deployment 21 June 2024 12:52:14 UTC, block 39,806,346, hash 0x03293a1077dc6bdc31cf1506c97f7f3ea72c0de714fb625235b9585ef19f2a25. [M12-M13; E9]

State pinned 6 September 2026 15:10:31 UTC, block 120,324,137:

Field	Configuration / observation
Payment token / decimals	BSC USDT 0x55d398326f99059ff775485246999027b3197955; token/payment 18/18
Price / cap / configured winning amount	0.14 USDT; 50,000 / 50,000 USDT
Deposit window	21 June 2024 13:00-26 June 20:00 UTC
Refund window	27 June 09:00-28 June 09:00 UTC
Claim window	27 June 08:00-27 December 2024 12:00 UTC
Vesting	15% initial, remainder through 27 November 2024 12:00 UTC
Principal / fees / winning-refund / losing-refund	6,025 / 0 / 5,000 / 0 USDT
Claimed-entitlement counter	561.112862335267803167 USDT-equivalent
Proceeds flag / USDT balance / MBUCKS balance	true / 0 / 0
Owner	0x462a647318d8dc1f0b5217b14cdcc90957305a1d
Allocation authorizer	0x5482d260df17a64c563b6b65f35748d4e2a0df00

Owner and authorizer are distinct technical roles, not identified humans. The public page says fees non-refundable, requires KYC and lists 4,410,500 initial circulating tokens; its terms link returned the same page, not an executed contract.

All Sale logs in contiguous ranges 39,806,346-40,056,346 cover the immutable deposit/refund periods. Successful USDT receipts verify five deposits. [E9]

UTC	Depositor	USDT

Refund: 28 June 2024 05:26:10 UTC, 5,000 USDT returned to the original 67ee...36d8 depositor; hash 0xa03846182a4924cf6031972d080bf6ad0a09f84248da48d9464f7aa3fd7f8813. Proceeds: 1 July 2024 11:21:38 UTC, block 40,091,197, owner called withdrawWinningAmountWithFees(address) naming itself and received 1,025 USDT; flag false -> true across blocks 40,091,196/197; hash 0xa11da8f23720ac0b3113047633bc4c540783d4bed41d012ef5c5387674244de0. Resolve hashes at <https://bscscan.com/tx/> plus hash.

Thus 6,025 = 5,000 + 1,025 USDT for Launchblock. Spores' \$150,000 display and Republic outcomes belong to different venues. The claim routine counts vested payment-currency entitlement then converts it into sale tokens: 561.112862335267803167 is not MBUCKS or cash paid out. Three early 28-29 June receipts delivered 389.510620692782009428, 144.830656974886436257, 586.557728595609444357 MBUCKS to depositors; hashes in sale_verified_early_events.json. [E9]

Sale claims and final inventory: 7 September 2026 verification

The public index contains 19 ordinary transactions / 20 token-transfer rows. All 23 distinct hashes, receipts and block headers were verified against Binance BSC RPC; 18 transfer events involve the exact authenticated USDT or MBUCKS contracts. Two unrelated-token rows were excluded, including a USDT-lookalike transfer. The 10,258-byte runtime observed at that snapshot exactly matches Sourcify's deployed bytecode. [E10]

All five known depositors' counters were checked at block 120,422,034, 7 September 2026 03:25:18 UTC. The eight successful claims reproduce every account's currency counter and token payout from fixed vesting configuration and original block timestamps. The earlier contiguous deposit census plus exact counter reconciliation resolves this sale's successful-claims history at the snapshot; it does not establish off-contract outcomes.

Depositor prefix	Deposit / refund USDT	Claim counter, USDT-equivalent	MBUCKS received
3ce3a276	500 / 0	86.112862335267803167	615.091873823341451192
a47a1d45	50 / 0	0	0
67eeae0a	5,000 / 5,000	0	0

Depositor prefix	Deposit / refund USDT	Claim counter, USDT-equivalent	MBUCKS received
487363c0	350 / 0	350	2499.9999999999999999
5a168ccb	125 / 0	125	892.857142857142857142

Total paid: 4,007.949016680484308333 MBUCKS, representing 561.112862335267803167 USDT-equivalent. Two participants fully claimed their currency entitlement, with the displayed token conversion floors; one received the complete 5,000-USDT refund; one claimed partly and one had no claim/refund. Full addresses and eight claim receipts are in E10.

On 8 January 2025 16:23:20 UTC, block 45,590,721, owner 0x462a647318d8dc1f0b5217b14cdcc90957305a1d called the existing withdrawAll(address) function, naming itself, and received 77,420.050983319515691667 MBUCKS. Hash: 0xded7ccb71d50d0a27e64e385e77a0c23645a33b19b8c1a7ac378cb77c3cc41ec. This follows the original configured 27 December 2024, 12:00 UTC claim deadline. It is not a demonstrated change of withdrawal permissions.

81,428 MBUCKS funded = 4,007.949016680484308333 claimed + 77,420.050983319515691667 withdrawn. The withdrawal includes excess inventory; the entire amount cannot be called buyer loss. The 463.887137664732196833 USDT-equivalent accounting remainder still is not established as stolen cash or legally due compensation. Signed allocation for the 50-USDT depositor, accepted expiry conditions, claim-authorization availability, notices, support problems and off-contract settlements remain missing. Owner onward use, staking/buybacks and other venues remain unresolved. [E10]

Trading, staking and publications

Verified PancakeSwap V2 MBUCKS/WBNB pool 0x5282c0ea15348dfa64a8a2690e0cb770e56a72dc. At block 120,150,826, 5 September 2026 17:30:16 UTC, 20 successful V2/V3 factory checks covered WBNB/USDT/USDC/BUSD and four V3 tiers; only this V2 returned, with a successful V3 positive control. This is bounded coverage, not all venues/chains/migrations. Three located swaps date 29 July / 15 November 2024 / 20 August 2026; November also has a separate LP burn. August execution is 2,432 MBUCKS; summing transfer legs gives 5,120 and overcounts, with no evidence MegaFans used that method. No full loop/holder/promotion-return census or wash percentage was established. [E6]

Publication	Precise issue / remaining evidence
29 May 2024 launch release	Completed-launch/listing wording coexists with upcoming June availability; BSC deployment is not Binance exchange listing; later execution is verified [M5]
Spores 24-26 June 2024	\$0.14, 27 June listing and filled \$150,000 target displayed; settlements untraced [M6]
Spores valuation	4,001,500 × \$0.14 = \$560,210, versus displayed \$259,910, implying 1,856,500 tokens; category basis unresolved [M6; E6]
Staking	Up-to-150% APY / guaranteed-return headline versus 60/100/150% APR for 45/90/180 days; reserves, accrual/compounding and payouts unverified [M7; M14]
Republic buybacks	45% of net profits represented for buybacks/rewards and possible burns, with dilution/price-risk warnings; complete ledger missing [M2]

The 28 June 2024 18:28:54 UTC staking archive links Ferrum pools 0xdd1595de28b28d64b40803c9713f1ab33f47b173, 0xbf7e1ab7ea1f919dcce748e7d187f5d3d052abce,

0x2de19777f66f508173b392ed982b3d485f04ae38. Earlier code checks covered five linked addresses. These three historical links are not a deposits/rewards census and are separate from Sale. [M14; E6]

Audit, binaries and privacy

Vidma's April 2023 MegaNFT page scopes an ERC721 review to commit 797bba0cd5f7f6ef56db9a3a288c24b81c1f11b5, repository megafans/SmartContracts, file ERC721A/MegaNFT.sol. The commit exists; the linked PDF yielded only a wrapper. Introductory Ammbr/severity-count inconsistencies are not adopted as MegaFans findings. The review does not certify deployment, games, staking, trading or privacy. [M15-M16]

Three US app histories show March-April 2023 last binary releases and observed 18+ ratings. Thai Crash n Win and UK Tunnel Tournament also name Megafans, Inc., show 2023 releases and link Appic Studio policy. Apple labels developer tracking/advertising device/usage declarations unverified. Local-currency in-app tokens are not authenticated on-chain MBUCKS purchases; current regional availability does not establish historical users/residence or absence of backend work. [M8; M18]

Historical 2021 / May 2022 wrappers and a September 2022 iframe identify Termly 6187b4c9-0481-4366-bd7c-a8a9ab284a67. The archived policy body remains absent; a terms-of-use route does not determine type. The viewer loaded during the historical collection, metadata/content endpoints returned 404, not proof no policy existed. Appic describes ad/game SDKs, mailing lists, screen/social/game identifiers and country-dependent processing, naming Apple, Chartboost, Facebook, Google, Unity; it does not identify each MegaFans build's SDKs. Production binaries/source, processors, wallet/prize/KYC backends, versioned policy and consent remain needed; actual unlawful collection is unproved. [M17-M18]

6. Techstars / Cardano: delivery established

Project Catalyst 1300182, applicant Techstars, late-2025 cohort: official record marks completion and 1,300,000 ADA distributed. This is a program grant, not a documented Laura payment. [T1]

Earlier concern	Resolved position
80% core-delivery narrative versus 30% payment table	7 May 2025 reviewer checked Catalyst's inability to change the schedule; 19 May administrative approval. Unexplained reallocation inference withdrawn; tranches are not an expense ledger [T2]
Thirty promised, twenty selected	Approved gate 15-20, up to thirty only for exceptional pool; twenty met it [T2]
Twenty selected, eighteen showcased	Two failed requirements; exclusion allowed; 18/20 = 90% graduated [T2-T3]
Ten administrative months versus ten teaching weeks	Preparation, teaching, December showcase, holidays and reporting are distinct phases [T2-T3]
Missing final report / Laura role	Report 27 February 2026, mentor roster p32, recovered [T3]

Approved delivery 7-10 masterclasses / 2-4 practices; reported 12 classes, four mandatory + one optional practice, with administrative acceptance. Final evidence submitted 27 February 2026, approved 24 March. This supports delivery, not an independent financial audit. [T2]

The report gives 447 scheduled, not reconciled completed, mentor meetings; 51 mentors = 47 external + four staff, 4.87/5 satisfaction, 12 accelerator applications, 230 RSVPs / 186 live viewers. Some charts have 16 responses, not necessarily sixteen unique companies or every average's denominator. Business

highlights are founder-reported. Legal/technical diligence and admission do not certify token compliance, security or investment merit; mentoring does not establish grant authority. [T2-T4]

Remaining low-priority evaluation concerns completed meetings, survey denominators and supported later cohort financing/revenue. A later failed milestone-6 retrieval does not undo preserved approved evidence. Separate 2026 proposals, generic portfolio totals and third-party commentary are excluded as substitutes. No diverted-grant, fictitious-delivery or Laura personal-misuse finding is supported. [T5; E8-E9]

7. Remaining evidence register

ID / historical status	Decisive record
EV-046, narrowed - Kaskade rules	Accepted rule version, full multipliers, epoch/block cutoffs, all-wallet scoring, exclusions, Merkle leaves/roots
EV-047, open - controllers	Dated keys/mandates, instructions, capital agreements, authenticated parties and Laura's exact departure/authority records
EV-048, narrowed - campaign history	Redacted swaps/rebates/frontend attribution, other Liquity claimants, historical Scroll terms and domain/operator changes
EV-049, narrowed - MegaFans offers	Executed buyer terms/allocations/notices, Reg S, approved model, venue-specific settlements
EV-050, narrowed - financial delivery	Successful Sale claims and final withdrawal reconciled; accepted expiry/allocations, off-contract settlements, owner onward use, staking deposits/rewards/reserves, net profits and buyback fills/burns remain
EV-051, narrowed - software/data/trading	Deployed NFT/build match, binaries/SDKs/backends/processors, historical policy/consent and relevant complete market records
EV-053, open; low priority - Cardano	Anonymized booked/completed sessions, survey denominators and supported later cohort outcomes

Actual operators, venues, developers, source authors and participants are potential custodians. Accepted delivery findings, collector reconciliations and the Launchblock refund remain resolved subquestions within these compound gaps.

8. Evidence navigation and source register

Source observations retain their original dates. This is an editorial republication, not a new live recheck. Earlier reports are work product, not independent corroboration. Hashes identify copies; publisher statements, raw data, decoding and calculations have different evidential roles.

E1-E10 below are historical working-record identifiers and describe the basis cited by the source report. They do not assert that every underlying file is included in this release; consult the repository inventory for the files actually available. Source numbering is retained for traceability, so gaps are intentional.

Historical evidence sets and precedence

ID	Historical record / set	Purpose
E1	KASKADE_HISTORY_EXPANSION_NOTES.md; inventory; raw/decoded receipts; calculations; independent QA	Nine-wallet reconstruction, all 66 path swaps, full addresses, handoffs and original claims.
E2	KASKADE_COLLECTOR_INBOUND_SUPPLEMENT.md; raw/decoded JSON and calculator	Resolves 17 April excess inflows and the 24 April return transfer.
E3	KASKADE_EXTRA_CLAIMANTS_SUPPLEMENT.md; raw/decoded JSON and calculator	Verifies two extra reward sources; supersedes E2's earlier open-source question.
E4	REDACTED_POOL_HISTORY_NOTES.md; redacted_pool_verified_facts.json	Correct pool identity and bounded history coverage.
E5	KASKADE_ARCHIVED_CAMPAIGN_CHUNKS_NOTES.md; retrieval logs	Earlier acquisition coverage/failures; later successful archives are recorded in E9.
E6	MBUCKS_HISTORY_PROMOTIONS_NOTES.md; volume_megafans_raw; mbucks_history_raw	Selected swaps, factory checks, staking-address checks and valuation arithmetic.
E7	Company audit reviews; role notes; MegaFans deck; Techstars extraction/chart images	Earlier dispositions and original page/source verification.
E8	First secondary-project research pass and source register	Rules, precise contract leads and NFT code provenance.
E9	Deep secondary-project research notes, secondary_sources.json and selected raw records	Sale receipts/state, versioned publisher evidence, Kaskade backend mapping and policy ID.
E10	SECONDARY_RESEARCH_UPDATE_2026-09-07.md; sale reconciliation CSV/JSON; raw RPC records; web_findings.json	23-hash verification; complete known-buyer claims and final Sale inventory at the stated snapshot.
