

KidletCoin and NEM

Historical source edition | 7 September 2026

Public crypto research edition. The following material preserves historical analysis, source identifiers, transaction amounts and stated qualifications. Observations retain their original dates, principally 5-7 September 2026. Preparing this edition did not repeat the blockchain, corporate-registry or legal research.

Read each assertion with its cited source and limits. A public role, a wallet connection or a valid transaction does not by itself identify a human operator, prove personal receipt or establish wrongdoing. The reports distinguish findings, interpretations and unanswered questions.

Correction precedence: the 7 September 2026 ShibaFriend claims review reports repayment of the principal of all 23 non-dust funding addresses, with only 168 base units of dust unmatched. It also reports equal project matches for all 194 identified paid Mystery Box mints. Those later findings supersede earlier uncertainty about those specific questions. See [Research_Paper_ShibaFriend_Claims_Review.pdf](#).

Original source-page labels and reference identifiers are retained where useful. Gaps in numbering reflect the crypto-only scope. Historical references to companion records are locators; consult the repository inventory to see which records are included. Current availability of an external source is not guaranteed.

Contents and document control

| Consolidated investigator edition | Remaining-question review, 7 September 2026

This integrated master covers child-data solicitation, consent questions, project delivery and financial governance. New archive, app and historical-rule findings are placed in their relevant sections. A concise records brief ends the report. Actual entries, permissions and personal responsibility remain unproved; NEM chain observations retain their stated collection date.

1. Findings and scope	3
2. Laura’s dated public role	3
3. Offers and delivered products	5
4. Contest and data handling	5
5. Wallet source and production boundary	7
6. Curriculum and later domain history	8

September 6 research source register - added records	22
September 7 verification sources	25
Video and corroboration sources	26
Records review: KidletCoin consent and adult responsibility	27

1. Findings and scope

This report consolidates public-source research through 7 September 2026. Contest archives, historical platform rules, app publication history, corporate-record leads and two public NEM videos were integrated in this edition. The full NEM chain and price reconstruction remains the 5 September collection. A bounded 7 September refresh verifies education-fund history and three account thresholds; it is not a full-chain replay. A short records brief at the end identifies the next records to obtain. It concerns adult decisions and institutions, with children unnamed. GamiFi and the private construction dispute remain separate.

The record supports Laura Takenaka / Laura Walsh's substantial project involvement, advertised child-data solicitation, a wallet-source credential defect, shared blockchain authorization and recurring Foundation regional payments to an associated mixed-use account.

Finding	Supported result and boundary
Adult involvement	First-person planning, recruitment, wallet and milestone statements, corroborated by an institutional article.
Contest	Ages 8-18; identifying details, video link and wallet requested for selection, 20-30 KID and publication. Entry receipt, consent and awards remain unverified.
Token	NEM NIS1 kidlet:kid; fixed 21 million supply; 28 indexed transfers; namespace expired at block 3,178,560.
Exchange-like activity	Reciprocal KID/XEM movements among shared-control accounts; independent customers, merchant redemption and public market price unverified.
Regional funding	Twelve receipts: 221,287.57 XEM, approximately CA\$52,553.72 at historical daily closes. No approved KID grant established.
Reporting	Published technology allocation says 43%; displayed figures calculate 27.3%. Signed accounts and reconciliation remain missing.

No finding of child abuse, fraud, data sale, illicit enrichment, Foundation diversion or exclusive human wallet custody follows from these facts alone. Each requires matching conduct, attribution, jurisdiction and knowledge evidence. Source originals and raw responses control over derivative reports.

2. Laura’s dated public role

Date	Documented act or role	Attribution and significance
28 August 2018	Public caption describes ongoing KID business-logic work, a functioning wallet and recruitment of helpers.	First-person project planning and recruitment, beyond family affiliation.
November-December 2018	NEM Thailand Country Lead and candidate for Secretary/Council; family project discussed publicly.	Institutional role and disclosed family connection. She stated she was not on Council at the time.
January-February 2019	Promoted wallet demonstration and next milestone; described the KID wallet the project team had made as a NEMPay fork.	Direct participation and release discussion; does not identify who coded or signed a production app.
May 2019	Foundation update identifies nonvoting interim Secretary, without additional remuneration; shared communications responsibilities.	Concrete institutional duties relevant to promotion approval records.
13 June 2019	Later Foundation update reports EGM director appointment.	Appointment is distinct from the unsuccessful 2018 election; signed instruments remain needed.

Date	Documented act or role	Attribution and significance
30 June 2019 publication	Foundation update reports Laura and Jason Lee appointed non-remunerated directors of NEM Malaysia.	Separate reported office; exact entity, appointment dates and mandates require Malaysian corporate records. [NP01]
After 29 August 2019 AGM	Foundation update reports Honorary Secretary appointment.	Corporate appointment, separate from election results and Malaysian office.
September 2019	International Baccalaureate account credits Laura with helping establish KID and jointly planning curriculum.	Institutional corroboration of adult operational support.
November 2019	NEM's account presented Laura as Secretary alongside KID at a Thailand technology festival.	Foundation promotion/association; not proof of a grant or contest-data custody.
March 2020	ROI report lists Laura as Council Member; forum discussion attributes an expenses-reporting assurance to her.	A specific reporting statement for comparison with the complete accounts.

The wallet-demo profile now displays Walsh and contains a contemporary comment addressing Takenaka. A first-person 2021 interview under Walsh describes opening NEM's Thailand office and the daughter's token project. Together these support continuity of the public professional identity, not civil identification or exclusive custody of associated keys. [S001-S008]

Recorded NEM statements and council endorsement

Bit:Talk was uploaded 11 December 2018 UTC (25:07). Automatic English captions supply approximate timestamps; the project name is garbled. [V01]

Video time	Paraphrased statement by Laura
01:01-04:40	Promotes education, adoption and easier API integration.
05:50-06:26	Corporate funds should require multiple approvals; explains multisignature thresholds.
07:05-07:17	Mentions her daughter's project during namespace explanation.
11:59-13:10	Says the Community Fund has been replaced by Ventures; describes the former proposal, milestone and voting process.
20:17-21:44	Attributes Coincheck theft to exchange security; claims multisignature would have prevented it.
23:20-24:18	Recommends cold storage, multiple approvals and scrutiny of exchange security.

In her contemporaneous Reddit AMA, Laura expressly names KidletCoin as her daughter's project and advocates introducing children to blockchain early. This independently identifies the project associated with the indistinct captioned name and corroborates her promotional involvement. [V04]

Coincheck's incident account describes malware, unauthorized network access and stolen private keys; NEM's contemporaneous release likewise describes an exchange-wallet compromise. The breach explanation is corroborated. [V05-V06] The absolute prevention claim requires a separate assessment of independent custody and key protection. Investigative comparison should use the actual thresholds and dated mandates in section 8. Technical familiarity does not identify later human signers or establish knowledge of the wallet-source defect. No intentional lie is established in either video.

The second upload is Alex Tinsman's endorsement of Laura. Its separate statement matrix and Laura's own written transparency positions appear in section 13. Both videos' dates identify uploads, not independently

established recording dates. Their captions contain recognition errors; check the original audio before treating any passage as an exact quotation. [V01-V03]

Laura's 2 December 2018 candidate reply gives the meaning of her government/UN experience: five years in Nova Scotia education administration and a brief UNDP Bangkok Regional Hub role covering partnerships, due-diligence paperwork and communications. Native post 79959 is unchanged version 1. This is her own account, not employer-certified tenure or evidence of a UN procurement award to NEM. [V21]

3. Offers and delivered products

Publicity presented a child as co-founder/CEO, assisted by adults. A June 2019 interview described support from the mother, friends, unnamed private investors and blockchain helpers. It supplies no funding agreements, amounts or operator register. An e27 Singapore directory label does not establish incorporation.

Representation or product	Recovered evidence	Delivery assessment
KID earned for learning or work	NEM's November 2018 article described one KID as an hour-of-work unit and a store to follow.	A descriptive unit, not a fiat peg, legal wage entitlement or cash guarantee.
Spending or store redemption	One June interview described shopping as available; other contemporary publicity described partners or a store still to come.	A material readiness discrepancy. No identified merchant contract, redemption order or enforceable rate was recovered.
Wallet availability	Native forum revision history dates circulation of com.kidletcoin.app to 4 December 2018; an archived project announcement follows in January 2019.	Earlier public app-link lead; neither record supplies a signed production APK or completed installation record. [KA01-KA02]
Quiz beta	June 22 channel upload described a beta demonstrated June 20.	Promoted functionality beyond the located wallet source; quiz build/backend not recovered.
Free curriculum	Project account shared an identifiable 111-page PDF on July 2, 2020.	A delivered educational file; authorship and commissioning remain unassigned.
Financial fundraising	The June interview rejected an ICO and described private support.	Do not substitute an ICO theory for the actual offer terms. Later reciprocal KID/XEM records also preclude saying every KID movement was necessarily free.

The e27 URL says June 20, while an earlier extraction displayed June 21; use June 2019 without inventing a one-day sequence. Thai Beartai (4 July 2019), Hong Kong Fortune Insight (3 July 2019) and NEM-derived Japanese BITTIMES (2 December 2018) describe store/partners as future work. BITTIMES'2025 update marker is not a new project event. Working translations add context to mixed readiness claims, not proof of redemption. [S009-S012; KD08-KD10]

The 2020 UNDP/UNCDF report (printed pp.10, 31; footnote 14) cites through Chris Skinner to e27; its Australian Government/Citi acknowledgement funds the report, not KID. IB's 2019/20 review, captured 18 May 2021, repeats the known 2019 feature and incorrectly calls KID rewards bitcoins. Neither publication establishes product testing, BTC prizes or actual purchases. [KD11-KD13]

4. Contest and data handling

YouTube video 3ydvqwGaw0o, on channel UC2sui4vaP9sWpevdKbytQUA, advertises a contest for ages 8-18. The recovered description asks for a video of up to three minutes about finance/blockchain, sent as a link to info@kidlet.io with name, age, email, location and receiving wallet address. It offers 20-30 KID and channel publication for selected videos; it does not promise every entrant a prize. Either the Kidlet wallet or a generic NEM wallet could be used. [S013-S014; KC01]

Metadata dates the 46-second solicitation to 2 June 2019; the description sets an 11 June deadline. Two archived descriptions, 10 December 2022 at 07:29:44 and 14:15:19 UTC, match the fresh 2026 text exactly.

Description SHA-256: 589e279af0d419a83cac42a3d4d5522b36ce9004b5d69874e6a37331fdf87105. This fixes the recovered wording by December 2022, not every editable word at the June 2019 upload or a contest still open in 2022. [KC02]

Requested element	Concrete investigative issue
Age, name and email	Age eligibility and entry contact are plausible purposes. For younger children, identify the adult-consent and representative-contact arrangement.
Location	The recovered rules show no geographic restriction or stated location need. Determine required precision; the word does not mean proven GPS or home address collection.
Public wallet	A receiving address serves payment. Collecting it with identity before selection creates a linkable bundle if received. No seed phrase, password or private key was requested.
Video	Could reveal image, voice or surroundings, but face/voice appearance was not expressly mandatory. Publication was advertised; valid authorization and actual publication still need evidence.
Email destination	Establish historical administrators, forwarding, access, retention and protection. An info@ label does not prove public access or plaintext storage.

The recovered description lacks a parent-first step, consent process or contest privacy link. This is a finding about that description. No usable spoken transcript was recovered: archived caption requests failed or returned no items; live caption requests returned empty bodies. What the video said, entrant replies contained or private permissions recorded therefore remains unverified. The description is English; language alone does not establish Canadian targeting. [KC01; KC05]

The 2021 and 2022 homepages link to actual /privacy-policy/ and /terms-conditions/ paths, rather than empty placeholders. Their bodies and applicability to the contest remain unrecovered. Archived YouTube contest policies from 26 April and 17 July 2019 require official rules, a privacy notice explaining data use, and awards administered under the rules. Their matching provisions support a contemporary notice inquiry; they do not prove that a separate Kidlet notice was absent. A platform-policy issue is distinct from a statutory offence. [KC03; KL17-KL18]

No verified entrant, received email, winner list, award record or published entrant video was recovered. The six returned channel titles (quiz, contest, birthday, wallet, holiday greeting, introduction) contain no winner announcement; private, unlisted, deleted and other-channel uploads are outside that check. The 11 June 20-KID transfer is a timing lead, not an identified prize. [K20]

Historical infrastructure provides custody leads:

- Common Crawl recorded <https://kidlet.io/> (kidlet.io) at 00:42:41 UTC on 23 January 2019, IP 162.241.252.29, Apache, HTTP 406 Mod_Security rejection. The 645-byte compressed record occupies bytes 16556837-16557481; payload digest verified; SHA-256 108389334fe907fd7caaab8e9b7780d4dfec6f6fd2b2ae04ac0cf5ce3414332f. It contains no homepage or policy. [KD01-KD02]
- An additional Common Crawl response dated 21 April 2019, 00:14:13 UTC, returns the same IP and Apache/Mod_Security 406 result. Its 643-byte compressed WARC was retrieved and its payload digest matched. It brings the server evidence closer to the contest but supplies no policy, MX, inbox or entry record. [KC04]
- Current 2026 ARIN/PTR identifies Unified Layer/BUEH-2 and box5680.bluehost.com; historical customer, provider, server country and MX require separate records. [KD03-KD04]
- Certificate 1394242687, Let's Encrypt Authority X3, valid 17 April 2019,15:11:11 to 16 July 2019,15:11:11 UTC, covers kidlet.io, www, mail, webmail, autodiscover, cpanel, webdisk. DER SHA-256 C64D61F37E8C63086B2ADE36A03AE64D797EEC6D292BB51B945EA209B91F0930. Dates/names were parsed; independent chain-signature validation was outside scope. [KD05-KD07]

Provisioned certificate names do not prove an operating inbox, receipt, access permissions, consent, security, retention or deletion. No private child data or administrative endpoint was accessed.

5. Wallet source and production boundary

The customized NEMPay source is pinned to d8c2e9b3a364734a17bead61f5549672dfb73de6: eleven commits, 8-9 June 2018; mainnet selected. [S015-S017]

Source finding	Significance and demonstrated limit
Fingerprint customization stores the actual wallet password in ordinary Ionic Storage and logs the retrieved value before authentication.	A concrete credential-handling defect in that source. Actual production logcat exposure depends on build/runtime logging; no live credential interception was observed.
Private-key clipboard function	Local exposure surface. No interception or transmitted private key was found.
PlainTextMessage input can become a public blockchain message	A durable-disclosure risk; no visible permanence warning in the reviewed path. No child-identifying message was located in the KID index.
Default nodes largely use HTTP	Transport confidentiality/integrity risk. Signed transactions retain a distinct integrity mechanism; this is not proof private keys were uploaded.
Balance/login uses short mosaic name kid	Display confusion risk because namespace is not pinned there. Transfer confirmation/signing retains the full mosaic identifier.
Build inputs include camera/fingerprint and other permissions	Source/build-input inventory, not an authenticated production manifest. No location, microphone recording, device contacts, SMS or call-log permission was identified in those inputs.

Source package `com.Kidlet.app`, version 1.0.1, differs from the advertised Play package `com.kidletcoin.app`. Finnish forum post 37866 and its public second revision preserve the exact advertised URL in both the original and edited text; native timestamps date the original post to 4 December 2018, 07:17:34.620 UTC. This is platform-history evidence of link circulation, not an authenticated Google listing, publisher identity or binary. Its generated preview cannot establish the complete historical listing. [KA01-KA03]

No authenticated APK/AAB, release certificate or reproducible match was recovered. A similar screenshot corroborates advertised fingerprint functionality only. Laura's coding, knowledge of defects and access to credentials remain unassigned. The reviewed wallet shows no automatic upload of the contest identity/video bundle; contest email, wallet and unrecovered quiz backend are distinct paths.

The fingerprint code invokes a plugin and stores the wallet password; it does not demonstrate collection of fingerprint images/templates or a child-biometric database. Its local SQLite address book stores entered contact names and wallet addresses, not an observed import of device contacts. Wallet names are labels, not a proven legal-name requirement. No app was installed or executed. [S018; KA07]

The 6 September tree has 202 entries, `truncated:false`, no APK/AAB/IPA; branch remains pinned, `releases/tags/forks` return empty lists and Play returned 404. These bounded retrieval results do not exclude private releases. Ten commits associate with `isaganiesteron` (GitHub 3234551), one with `baconbkk` (8854714), an 8 June README edit. Account associations are commissioning/release leads, not verified identities or defect authorship. No quiz repository, backend or redemption settlement was authenticated. Fresh metadata for project video `S2B4UIKd0jI` still describes a 20 June 2019 Bangkok demonstration, uploaded 22 June. No usable transcript or production build was recovered. Google Play publisher records, original APKs and any later bundles, signing certificates, listing/policy versions and release approvals are the decisive production evidence. Current empty repository lists and 404 store views do not establish that a release never existed or when it ended. [K01-K11; KA04-KA06; KA08-KA11]

6. Curriculum and later domain history

The 111-page Blockchains and Cryptocurrencies in the Real world was delivered and promoted. GitLab account D K / kln_nurv (5604513), project 18610512, uploaded it 30 June 2020 at 06:55:41 UTC in commit e9d3f30f10ab953471b952dbb9624106d0c0d129. Supplied and pinned PDFs match: 1,609,807 bytes; SHA-256 9f81e9a98fd8203b8c424d620f3307899850f3a4c05b78acad3ffe2e74f0b396. It is a general compilation containing a NEM chapter, without recovered KID/Laura authorship, sponsor credit, contest instruction or form. Structural review found no JavaScript, launch action, executable or form submission; this is not certification of external links. [S019]

The 2 July 2020 project tweet links that file, mentions pandemic disruption and tags NEMofficial. It proves distribution, not Laura's authorship or Foundation funding. The 24 September 2021 “Test” post proves later account activity, not relaunch. [S020-S021]

Platform events attribute project creation 6 May 2020,06:24:47.151 UTC to kln_nurv. msali123 (5984591) proposed README/content/image work; GitLab baconbkk (5983554) proposed an empty images/.gitkeep via !4 on 16 May. Matching GitHub/GitLab handles are unverified cross-platform identity leads. All seven returned merge requests have null merge-commit fields: !1-!2 closed, !3-!7 open. Published PDF commit descends directly from 32a02a15..., so proposed objects cannot be credited as accepted PDF content. [K12-K18]

The ODT predecessor SHA-256 is 285a5f5b8b918368e47b229f240b562d3d9f30e2623fbbf1acc71fa17aa6b7ad; editable metadata gives 23 December 2019 creation and 3 February 2020 modification, without creator. Those are unauthenticated authorship dates. Commissioning, acceptance and payment remain missing. [K19]

Later record	What it establishes
2021-2022 archived homepages	Original-project presentation and configured WordPress statistics; no proven child-specific tracking or actual transmitted visitor records.
December 8, 2023 gambling subdomain	Unrelated content existed in the domain space. Its publisher and the original operator's loss-of-control date are unknown.
June 17, 2025 registration creation	A later registration record, not proof of continuous ownership from the project era.
September 5, 2026 recorded RDAP/DNS checks	Saved records showed pending deletion/redemption indicators and NXDOMAIN. A supplied review reported a conflicting live fetch without its response evidence; do not treat either as a timeless domain status.

Certificate history contains 345 observations/196 issuer-serial pairs; 28 pairs use the legacy mail/cPanel set. Its last observed certificate runs 21 April-20 July 2023; wildcard certificates first appear 10 October 2023, before the 8 December unrelated gambling capture. This dates a technical change, not human ownership or old-mailbox transfer. No recovered evidence links the later publisher/reacquirer to Laura. Registrar/privacy-service/country fields do not identify the historical controller, and the old email is not a verified present contact. [KD05; S022]

7. Chain scope, supply and expiry

The 5 September collection reconciles 28 indexed KID transfers, 19 participants and 25 directed pairs. Expanded scope: 24 terminal account histories, 2,314 distinct records, 2,160 asset-transfer rows and 1,770 positive explicit XEM transfers, including institutional/non-KID activity. Refresh ran approximately 13:50-13:59 UTC; terminal empty pages and matching latest-page baselines support the defined scope. Selected transaction objects were matched to preserved blocks from two endpoints in one operator family. “Complete” means those returned histories, not every NEM block/signature, exchange customer or unrelated address. Tables use confirmed UTC; creation times remain in raw records.

Lifecycle event	Confirmed UTC / height	Result
Initial namespace	April 9, 2018, 05:07:37 / 1,580,133	Registration record.
Original mosaic definition	April 9, 2018, 05:35:06 / 1,580,152	21 million KID; six decimals; fixed supply; transferable.
Renewal / definition	May 4, 2019 / 2,137,262 and 2,137,280	Renewal within grace; description newline changed, not another 21 million mint.
Last renewal	April 29, 2020, 06:33:31 / 2,652,960	No later renewal in returned issuer history.
Final expiry	May 2, 2021, 07:44:17 / 3,178,560	Rule-based lifecycle calculation matched to block time; grace boundary 3,221,760.

The levy is 10 atomic XEM = 0.00001 XEM, payable to NCEUKZ; no supply-change transaction was returned. May 2019 redefinition changes a new line, not supply. KID transfers span 9 December 2018-16 July 2019. Later administrative records do not extend that trading interval; expired-namespace ledger positions are not current spendable balances. The companion on-chain report retains all 28 transfers and 90 full hash references. [S023]

8. Allocation and signing authority

Issuer → staging → distributor forwards the same 21 million twice, producing 42 million gross movement. Total gross volume 60,901,115.523681 KID includes forwarding/returns, not revenue or distinct supply.

Historical position after July 16, 2019	KID	Supply share
Development fund NA5JKI	7,000,000	33.333333%
Education fund NDSTP4	6,300,000	30.000000%
Distributor NC6JT7	4,200,000	20.000000%
Three largest combined	17,500,000	83⅓%
Shared signer NBDCOH	698,940	3.328286%
Six secondary participants combined	1,020	0.004857%

Replay conserves 21 million without negative prefix balances. NBDCOH:1,000 +10 +699,000 -50 -20 -1,000 = 698,940 KID. The captured rich list omits 3,498,980 KID of ledger positions; historical replay controls.

Contest-period issuer NC7HKO was 2-of-2 excluding NBDCOH. Distributor/development were 3-of-6; education 1-of-6, including NBDCOH. Education's three-record history has no outgoing transfer. Membership shows authority, not misuse or distinct people.

A fresh 7 September check confirms that the education account received 6,300,000 KID at block 2,137,419, 4 May 2019, 08:35:22 UTC. At block 2,137,441, 09:02:26 UTC, its conversion added six cosignatory keys with a minimum of one. The allocation represents 30% of historical supply, not a cash valuation. Conversion hash: 9dd108cb37478b4fe959e789816c2c9f11278fac69e39e31e603e71e5e03186a. [V15]

This was shared access allowing any one authorized key to approve spending. NEM's documentation distinguishes that arrangement from requiring several approvals. [V14] It differs from the protection Laura recommended at 05:50-06:26 and 23:35-23:41. Her associated NBDCOH key was among the six, but the person who selected the threshold and each key's custodian remain unidentified. The specific question is why the education allocation used one approval while the distributor/development accounts used three. The bounded refresh returned the same three education records, an empty terminal page and no outgoing asset transfer; current account metadata remains 1-of-6 versus 3-of-6 for the other two. Two nodes in one operator family supplied matching education transaction objects; block objects contain the matching signatures. No independent consensus or cryptographic-signature validation was performed. [V15]

NBDCOH cosigned five KID transfers in January-July 2019, joined old Foundation operating control 26 August 2019, then participated in 358 Foundation actions (354 outgoing transfers/four control changes; 27 August 2019-9 July 2020 signatures). Nine other incoming signed records are excluded. Messages “Laura coin,” “sent from Laura,” and “Laura Walsh BSC,” plus professional continuity/demo chronology, support association without proving exclusive human custody. [S024-S025]

The 21 July 2019,12:57:10 UTC NEMNodes archive labels exact issuer NC7HKO “Gemdealer -1.0 -User Stake.” Row 188:2,128 harvested blocks, 4,593,841.05 vested XEM; table updated 19 July,01:57:56. Its row is complete within a partial 1,048,576-byte response. This is historical pseudonym evidence, not present balance or civil identity. A 27 January 2014 Gemdealer subscription post cites Bitcoin hash 0f82e6ab178bf6ffa32e6cba30e590c685cda195da133f1563e2f46a20e55eba; transaction/stake-redemption mapping remains unverified. [ND-01-ND-02]

Operator support separately corroborates Supernode payout account NCPAYOUTH2BGEGT3Q7K75PV27QKMN2IZRVZWM and reserve NAFUNDBUKIOSTMD4BNXL7ZFE735QHN7A3FBS6CMY. On 11 April 2018 BloodyRookie said he lacked reserve cosigning authority. Issuer's 460 receipts/183,273 XEM therefore have corroborated node-reward context; human operator and each entitlement remain unassigned. Do not classify them as KID financing. [N-S01-N-S02]

A further reading of the transaction fields narrows attribution. The 6.3-million-KID allocation records NCEUKZ as outer initiator, with NBLIIT and NDMV5M in the additional-signature fields. The later threshold conversion records the education account's own pre-conversion public key as signer. NBDCOH was an added member, not a signer field on either transaction. This neither identifies the human controlling the education key nor excludes off-chain instructions. No historical explanation for choosing 1-of-6 was recovered. The companion report and reproducible field-mapping record retain the exact account/hash pairs. [V16]

9. Small transfers and reciprocal payments

NBDCOH funded NCYKQW/NBGTCB with 10 XEM each on 28 May 2019, 17 seconds apart. Both became common members of five 2-of-3 accounts; three transferred KID, and NBGTCB cosigned seven outgoing KID movements. Initial 11 June route NBDCOH → NCYKQW → NBQVQ6 → ND6D4I forwards 20, 20, 10 KID. The first two legs repeat the same 20; no memo names a child, winner, merchant or purchase.

Confirmed KID date/time, UTC	Observed KID leg	Reciprocal XEM leg
June 11, 2019, 04:35:53	ND6D4I → NCIT7A: 1 KID	2.421466 XEM back at 04:31:39, one block earlier.
June 12, 2019, 04:01:29	ND6D4I → NCIT7A: 1.073681 KID	2.5 XEM back in the same block.
July 12, 2019, 06:14:40	NBYH5N → NCIT7A: 0.2 KID	0.533328 XEM back in the same block.
July 11, 2019, 07:04:56	NCIT7A → NBQVQ6: 0.25 KID	1 XEM in reverse at 06:53:39, nine blocks earlier.

Separate NCIT7A → NAYIOJ payments approximate 20% of the three strongest reciprocal XEM amounts, with atomic rounding. They are signed payments, not the protocol levy/fees. NAYIOJ reconciles 2.137836 received -1.981170 returned -0.050000 fee = 0.106666 XEM; its first five receipts were exhausted by return/fee. Gross receipts are not retained fee revenue. Other transfers lack a uniform reciprocal rule.

The records establish exchange-like operation or testing, not independent customers, commercial terms, wash-trading offence or public price. Exact paired hashes and blocks remain in the companion register (KID hashes 7366d75af66b6a876f63bb39fa801b62931c6bc37e74cfc37c1896fdf3df7cfd, 3cff7d284c437fdb4aeb3bee1c14a6d06d1acef87ac39b0be46450f89172b8a8, 640513d8ce8d400b2ffb6fc49ba21f4160bb2127cd6f994b2cfdc950d8274eb3).

10. Regional receipts and issuer payments

Foundation's president identified NASEACH as the former SEA regional account. Its 276 records/241 outgoing transfers contain 12 positive XEM payments to NBDCOH and none directly to the other 13 addresses in the original 14-address KID screen, including five core project wallets. [S026]

Payment date	Ledger reference	XEM
April 2, 2018	SEA/2018/04/04	18,741.15
May 2, 2018	SEA/2018/05/04	18,669.21
May 4, 2018	SEA/2018/05/07	9,440.73
June 5, 2018	SEA/2018/06/04	21,910.45
July 8, 2018	SEA/2018/07/03	35,388.31
August 7, 2018	SEA/2018/08/04	37,208.64
September 11, 2018	SEA/2018/09/03	55,996.80
October 8, 2018	SEA/2018/10/02	8,821.37
November 12, 2018	SEA/2018/11/02	8,865.08
December 14, 2018	SEA/2018/12/05	1,871.30
February 13, 2019	SEA/2019/02/01	601.30
September 6, 2019	SEA/2019/09/01	3,773.23
Total	12 distinct payments	221,287.57

Exact transactions/blocks verify these receipts; NBDCOH neither initiated nor cosigned them. Eleven precede its August 2019 Foundation operating appointment. CA\$52,553.72 sums confirmation-date CAD daily closes; it is not an approved KID budget, bank receipt or diverted amount. Employment, expense, consultancy or grant classification needs the references above.

Separately, old Foundation operating history has 584 records/545 outgoing transfers and zero direct matches to that 14-address screen; indirect/fiat routes remain outside it. NBDCOH's nine issuer payments total 151,894 XEM (April 2018-March 2019), approximately CA\$38,339.17, with period/conversion memos but no complete KID classification. A separate 100-XEM "For KID" transfer on 9 January 2019 is estimated CA\$8.55. The nine payments and twelve regional receipts overlap in mixed balances and must not be added as separate financing.

The 5 April 2018 memo says USD 4,000 at.23 against 17,237 XEM. Division gives 17,391.30 XEM; rates/fees/adjustments/invoice are missing, not proven falsification. Four dedicated staging/distribution/development/education accounts show six positive XEM transfers, gross 518 XEM including internal movement. Mixed issuer history also includes node rewards/loyalcoin, so its full activity cannot be assigned to KID. [N-S03; companion T044]

11. External destinations and valuation

Observed external route	Verified register flow	Attribution limit
ND2JRP	12 payments, 1,463,032 XEM, four senders, 2018-2021.	Historical Bittrex label corroborated by public payout/API records; no authenticated customer ledger.
NC64UF	18 payments, 5,748,124 XEM, five senders, 2018-2022.	Customer reports label Binance; operator/customer attribution is not directly authenticated.
NDOYB2	Issuer 20,000 XEM and signer 4 XEM on October 4, 2018, same reference.	Possible NEMChange association; does not prove a KID listing, completed sale or cash withdrawal.

Issuer → NCEUKZ:500,000 XEM, 6 March 2019,03:39:49 UTC; NCEUKZ → ND2JRP:500,000 XEM 2 minutes 42 seconds later. Issuer's 300,000 XEM on 6 June 2019 uses the same reference 37503ccaac214a018a2. Matching address/reference is a customer-reconciliation lead, not proof of beneficiary. The two 500,000 legs repeat principal. Broader NC64UF valuation CA\$784,624.39 is not established KID revenue, enrichment or loss.

All 49 selected CAD rows were recalculated against raw Yahoo confirmation-date closes without arithmetic mismatch. The 5 September 2026 CoinGecko CA\$0.00079851/XEM snapshot prices historical quantities only, not current balances/loss. No verified CAD price for original KID exists; XEM's price cannot value KID.

Bittrex Bermuda liquidators'30 June 2026 update says platform decommissioned 28 May and directs records to BittrexClaims@uk.gt.com. Official notices distinguish Bermuda from Liechtenstein (ALPS Trust Ltd.). Historical contracting/migration records must select the correct estate; exact customer credits, trades, withdrawals and settlements remain missing. No request was sent. [N-S04-N-S05]

12. Institutions and liquidation

NIS1 predates NEM Foundation; transaction fees go to harvesters, not automatically Foundation. Reserve funding, corporate membership and technical custody are distinct.

Institution	Recovered corporate or operational record
NEM.IO Foundation Limited	Singapore UEN 201632737 H; incorporated December 1, 2016; public company limited by guarantee supporting open-source blockchain activity. "Public" here does not mean exchange-listed.
NEM.IO Trust Limited	UEN 201632738 Z; same formation date and related fund-management objects. Separate legal entity.
Core Team / reserve custodians	Separate technical stewardship and review of reserve releases. Not identical to corporate membership or Council.
NEM Ventures	Distinct equity/convertible investment model; investment returns and due diligence require portfolio records.
NEM Group / NGL	Later commercial/execution consolidation intended to assume people, assets and intellectual property where possible.

The interview's 11:59-12:15 transition account omits a continuing program: unchanged 5 November 2018 committee posts retain previously approved NCF projects and milestone budgets. A 13 December update still had subsidiary incorporation pending; NEM's Taiwan announcement dates incorporation to 18 December. The 24 December English update says Ventures was financed from a different, largely dormant fund, not NCF. [V09-V10] This supports correcting an overbroad explanation, not a finding of intentional deception. Approved-award payments, backlog investment and regional Foundation expenses must be traced separately; the later funding announcement does not establish what Laura knew at recording.

In March 2019 Laura characterized community funding as having shifted to NEM Ventures. The Community Fund committee clarified its independence; Laura acknowledged that the Foundation, Community Fund and

Ventures were separate entities. This exchange requires payment attribution to the actual payer and approved program, rather than an assumed common NEM treasury. [V07]

The previously unnamed funding source can now be identified at the level of Ventures' own statement. Its official ecosystem page, archived 3 April 2019, says NEM Community Trust was then financed by the Operating Costs Fund, with eventual absorption of the Community Fund proposed. Matching that fund to the December unnamed reserve is an inference; no initial transfer is identified. It does not prove a later merger, initial amount or particular wallet. The Trust, Holdings and Ventures structure remains distinct from the Singapore Foundation. [V17]

Dated management updates report two operating-budget drawdowns by 3 February 2019 and a completed first investment transaction by 27 February. On 31 May, DaveH identified David Shaw as chair of the investment committee and governance group, with Core-appointed governance approving quarterly operating/investment budgets. The same update credits Laura with coordinated Wachsman messaging and the Catapult interview series. It establishes communications participation, not her investment-voting or drawdown authority. Bank records and exact transfer hashes remain missing. [V18]

A separate governance exception is documented: the US\$500,000 Vimba convertible note was announced in two tranches. Challenged against a quoted three-milestone minimum, DaveH acknowledged the deviation and cited Vimba's maturity, existing asset-management processes and unnecessary extra administration. The original mandate copy and formal exception approval remain unrecovered; his response establishes the stated exception, not a Laura decision or misuse of funds. [V19]

On 12 June 2020 Foundation announced execution passing to NEM Group. October discussion reported no paid Foundation roles to speakers' knowledge and approximately \$3.5 million remaining. These are management statements, not audited closing accounts or transfer schedules. Volatile XEM reserves meeting fiat costs explain purchasing-power pressure, not deception. [S027-S028]

Trust members resolved winding-up 4 June 2021; Foundation members 6 July 2022, published 13 July. An 29 August notice scheduled 29 September final meeting. Retained status is "Dissolved -Members' Voluntary Winding Up," without exact effective date. Liquidators: Lo Wei Min @ Mrs Pearlyn Chong and Chan Tuck Chee, Lo Hock Ling & Co. Voluntary liquidation does not itself establish insolvency/fraud. Corporate figures remain prior-source findings, not new registry clearance; the detailed predecessor retains registry/notice references S116-S125 at pp. 24-26.

The July resolution directs post-liability surplus to a qualifying Singapore charity/Institute of Public Character with similar objects, chosen under constitution 82(2). The final meeting was to receive liquidation accounts and decide record disposition. Mirror copies establish scheduled decisions/destination class, not actual recipient, payment or record destruction; certified originals and final schedules remain required. [N-S10-N-S11]

Separately, IRS-hosted 2022 Form 990 for Delaware's 2022-formed Symbol Syndicate (EIN 88-0622815), 28 pages, names President/CEO Kristy-Leigh A Minehan; signed 17 November 2025. USD contributions/grants 1,996,243; revenue 1,996,291; expenses 986,825; assets 1,009,540; liabilities 74. Page 12 answers No to independent compilation/review and audit. This separate US return neither supplies Singapore's audit nor identifies its liquidation beneficiary/Swiss settlement; it classifies none of the 21 selected payments. Foundation, Trust, NEM Group Trust, NEM Community Trust, proposed Swiss foundation and US Syndicate remain distinct. [ND-06]

Separate original-format Gazette notices for NEM.IO Trust Limited, UEN 201632738Z, identify an additional records trail. The 10 June 2021 publication records a 4 June resolution directing any post-liability surplus to a qualifying charity/Institute of Public Character under constitution regulation 60(2). The 10 August publication schedules a 10 September final meeting to receive the liquidators' account and decide disposal of records. Named liquidators are Lo Wei Min @ Mrs Pearlyn Chong and Chan Tuck Chee. These mirror-hosted notices were readable through web retrieval; direct PDF downloads failed, so no original PDF bytes are claimed. They establish stated resolutions and scheduled business, not the actual recipient, payment, meeting outcome or record destruction. The Trust's 2021 records are separate from the Foundation's 2022 liquidation. [NP03-NP04]

13. Elections, appointments and approval policies

Alex Tinsman is the speaker in the 58-second endorsement, uploaded 7 December 2018 UTC. These claims belong to Tinsman. [V02]

Video time	Paraphrased endorsement claim
00:07-00:22	Credits Laura with Thailand leadership, government/UN experience, a blockchain hub and Kind Heaven involvement.
00:24-00:35	Attributes spending, milestone, roadmap and bylaw transparency, plus election reform, to Laura.
00:39-00:56	Endorses her fairness, responsiveness and community listening.

Laura's own posts dated 14 November 2018 advocate public bylaws, a published Catapult roadmap, public voting records consistent with privacy, and timely meeting minutes or summaries. She stated she was not on Council. These are her positions, independently corroborating the endorsement's transparency theme; subsequent delivery must be tested against the records. [V03; S002]

The December 2018 corporate election required 500 XEM, registration/KYC and whitelisting; it was not a poll of all holders. Original reconstruction: 202 whitelisted accounts, at least 148 voters; Secretary Jason Lee 90, Laura 49; Laura 53 Council-option votes and no elected Council seat. Separate Pol polling was nonbinding.

Pattern or issue	Supported interpretation
32 applications funded from a Binance-tagged source with 501-503 XEM within approximately 49 minutes	Synchronized funding and later 500-XEM refunds support rejected registration applications. An exchange withdrawal source does not identify a single underlying owner.
Separate twenty-address correlated voting slate	Highly correlated valid ballots, not the same group as the rejected 32. Nelson Valero separately acknowledged 24 membership-loan transfers; recipient-level equivalence and quid pro quo remain unverified.
Sensitivity removing selected ballots	Modelled counterfactuals can change Council seat arithmetic. They do not establish that those ballots were legally invalid or that Laura was entitled to a seat.
Registration failures	The official postmortem acknowledged website, KYC, exchange-ownership and human-error issues, including four mistaken denials. Their full participation effect was not quantified.

No new full recount was conducted. Original method: 202-address whitelist, six polls, pinned nem-voting rules, cutoff block 1,935,989 (14 December 2018,08:29:54 UTC), hash 4dd3aeb6eeb9924c1e59c2f6e4f0212c6f18e324281019ee467452393aa7b1c7. Raw/valid votes, duplicate removal and poll-specific rules remain separate. Laura's later interim Secretary/director/Honorary Secretary appointments are not inherently fraudulent reversals of defeat; governing versions, notices, quorum and resolutions remain required. [S029-S031]

February 2019 update names ethics/conflict, community-best-interest and information-sharing policies, with CFO releases subject to ExCo/Council approval. Server creation 12 February 2019; modification 25 January 2020, version 2: current body is not an authenticated unchanged February original. Linked exports returned 410. Original IDs:

Policy	Original public document ID
Ethics and Conflict of Interest	1kjkmodaZL-c7Ptq7ZNmwirfPN4cd6DJNh_mWCH-vSQE
Community Best Interest	1-e7o_PnyshveAfX35xiaI8yv1b-yeSpDx--TzBeUGKA
Information Sharing	1c_sEA0iH-huwYXc1adq6JGBEqRoiBTdJrmtF2tV-Upw

Adopted versions, acknowledgments, interests, recusals and independent approvals remain missing. [N-S06]

September update reports 13 June EGM replacing two directors with Tan Choon Leng/Laura, 29 August AGM accepting 2018 audited accounts, then Honorary Secretary appointment under bylaw 33 after signed paperwork. It supplies no signed minutes/quorum/audit opinion. [N-S07]

The family project was publicly discussed on 20 November 2018; a participant's separate USD 2,000 salary statement concerns himself. On 3 July 2019, Inside_NEM stated that bank-payment evidence had been supplied to the Core Team and more than 70 Foundation MoUs/partner contracts reviewed. Native post metadata fixes that reply to July, correcting the earlier June date. The underlying records remain unrecovered and do not classify Laura's payments. [ND-11-ND-12; NP02]

The 30 June 2019 update separately reports Laura and Jason Lee as non-remunerated directors of NEM Malaysia. The post was created and edited that day. Obtain the exact Malaysian legal entity, certified appointment/cessation records, resolutions and mandates before assigning particular decisions or payments to that office. [NP01]

14. Reserve allocation and later mapping

Incoming management acknowledged weak accountability/ROI and runway pressure. February 2019 proposal sought 210 million XEM, approximately 2.333% of fixed supply. Community polling preceded separate Core Team authorization; neither minted currency nor automatically released reserves. [S032-S033]

Distinct source movement	Confirmed UTC	XEM
Operational reserve → old Foundation	March 8, 2019, 10:03:19	25,000,000
Operational reserve → settlor	June 19, 2019, 06:59:19	41,764,164.163755
Marketing reserve → settlor	June 19, 2019, 12:04:06	38,235,835.836245
Dev-fund source → trustee	December 11, 2019, 08:53:34	105,000,000
Distinct source allocation		210,000,000

June parts total 80 million; forwarding is internal movement. Retained reconciliation gives old Foundation 175 million, new Foundation 35 million plus 18.45 XEM residual. This reconciles sources, not bank conversion, approved expenses or KID financing. Source hashes:

- 25 million: f79a6dccf674a253b11534e451864e2eacd215fb44ab8be75c5866024dbfb992.
- 41,764,164.163755: b3f6f68c36c7cb4dde0b1863896a7d40ab2551127cab025d215dc47f8f1b3386.
- 38,235,835.836245: 0ac2ed1f1ea6e6fc529440bb50477bf0cd889253eb25ee9491fbac6ed58bb9de.
- 105 million: 60f6de0abcafef1e09d2e366beedffc9b486106ab4b160da134dd2c11d07d1a9.
- Final trustee transfer: c0f6080da5bb27400988bd9d8c9934978db670a3e8ac3c459fa1bdd6fb70e45c.

The report generated 30 March 2021,07:32:39 UTC and captured 16 June 2021,17:31:57 UTC maps three NIS sources to 125 distinct Symbol addresses. [ND-04]

Source NIS account	Displayed XEM
NATRUSTUAB5LAWDSOWDUPQUFYRTGTJZDGML2JKP	1,424,848,818.491020
NANODESTSN7GU76QPLGMJ7BCGCAA2PHVBZZUUI62	18,983,656.691000
NBKXLNQ2GKTLQBTXNF0HULNJDA7T2Q57CZGQ2TFP	234,150,985.700000
Displayed source sum	1,677,983,460.882020

Targets sum 1,677,983,460.920000 XYM; displayed source/target difference 0.037980. Decimal recalculation verifies the published table, not fresh balances or later spending. All 125 exact row/address/amount cells are

preserved in KIDLET_NEM_SYMBOL_ALLOCATION_125_ROWS_2021.csv and original archived_reserve_mapping_row1.json; the companion chain PDF summarizes the table.

An 18 August 2021 statement identifies Gibraltar's NEM Group Trust and proposes approximately 1.2 billion XEM/770 million XYM for a Swiss foundation. Gimre disputed it and said negotiations continued 20 August: no executed settlement is established. Its NBLOCKYZLCBV02XF2DB3D74AE2RC5WSHX5JEZ0ID rewards account differs from March's third source. [ND-03]

Public-table recovery is complete; downstream custody/spending, executed asset/IP/staff transfers and Singapore's actual surplus recipient remain unresolved. Portuguese captures add context, while redirects/revisit records supplied no signed instruments. Three NEM Ventures legal links returned 404; exact IDs remain record leads. [ND-05; ND-13]

15. Accounts, conflicts and institutional delivery

All nine embedded 2019 ROI pages were reviewed. $US\$1,848,635 \div US\$6,770,159 = 27.3\%$, versus narrative 43% technology development. The report supplies no reconciliation; different grouping requires documentation. This is a management-report discrepancy, not an audited fraud finding.

Reported item	Amount / finding
Q 1 2019 expense total	US\$1,773,729.89; category rows sum exactly.
Calendar 2019 published expense total	US\$6,770,159; detailed categories sum to US\$6,770,158, a US\$1 discrepancy.
Personnel	US\$4,133,564, approximately 61% of the published annual total.
Related parties	US\$1,428,843; no public breakdown tying this category to Thailand or KID.
Technology projects expense category	US\$513,155; distinct from the functional technology-development figure above.
Regional explanation	Collective 2019 redundancies and outstanding 2018 liabilities; no matching individual SEA references.

No signed audit opinion/complete audited statements were attached. Arithmetic checks do not establish incurred, classified or approved expenses. Laura's attributed expense-reporting assurance and Council listing identify statements/duties to investigate, not authorship of every table or knowledge of error. Public family disclosure defeats a blanket "hidden relationship" allegation, while formal declarations, recusal, staff-time and promotional approvals remain missing. [S034-S037]

Specific delivered activity has supporting records:

- Malaysian ministry statement dated 9 November 2018 describes launched NEM/six-university e-Scroll and next-day IIUM PhD credentials; its copy notes 18 March 2024 update. LuxTag's 10 November statement claims about 200 degrees on consortium Catapult NEM. This predates a later retrospective's September 2019 date, but is not 200 independently checked public-NIS1 credentials or a payment audit. [ND-08-ND-09]
- IIUM Holdings'January 2022 newsletter describes 11 January replacement as Ethereum; ongoing NEM use is unproved. FEU Tech's 28 June 2019 report corroborates an event with NEM Philippines head Emerson Fonseca. LPU's 2023 account reports a 2018 NEM Philippines elective; iACADEMY's 2023 agreement is later. Activity is supported; full enrollment, completion, payments and succession are not. [N-S13-N-S15; ND-10]
- The August 2018 NEM/TTA announcement names Laura as an MoU signatory and anticipates a Q3 2018 Bangkok centre opening. A recovered NEM Thailand article, first published 19 January 2019 and revised 22 January, announces an opening at Drafboard Coworking Space, floor 12A, Orakarn Building. It credits Laura and TTA's CEO with overseeing it. This closes the opening-announcement gap. The ceremony date,

operation before the December endorsement, lease, expenditure and sustained usage remain unverified. Blockshine/EX Sports' July 2019 centre is distinct absent connecting records. [N-S16-N-S17; V08; V11]

- Kind Heaven's 16 October 2018 NEM announcement names ASTA as development partner and anticipates a 2019 opening; Tinsman is the quoted NEM representative. The operator's 30 April 2021 AMA acknowledges the partnership but still places Las Vegas construction and final blockchain-partner selection ahead. Partnership work therefore cannot be treated as completed venue deployment. Tinsman's candidate policy says she brokered ASTA's partnership with Thailand/Vietnam support; her forum endorsement specifically credits Laura with partnership assistance. ASTA's own 18 December 2018 page acknowledges its intended development role. These records narrow Laura's role to reported partnership support; her engineering deliverables, contractual authority and payments remain unverified. [V02; V12-V13; V20]
- Tutellus' 7 June 2019 provider announcement credits Laura's support for its NEM Catapult course. The Foundation separately announced Spanish-language certification availability on 12 June. This supports a launched educational offering and her support role. The advertised US\$15,000 subsidy for the first 100 students is not a verified payment or enrollment total; receipts, completions and course-revenue reconciliation remain absent. [V22-V23]
- A nonbinding Ukrainian voting trial is not national election deployment.

In April 2019, Tinsman explained that regions had ended and the new Business Development team was taking over contracts, partnerships and MoUs. This identifies a later records function to examine. It does not establish a particular hub/Kind Heaven handover, Bangkok closure date or Laura's continuing obligations. [V24]

No institutional publication classifies the twelve SEA receipts or nine issuer transfers as deployment funding.

16. Legal assessment: Thailand and Singapore

The principal documented contexts are Thailand for the project and Singapore for the Foundation. Nationality, later residence, English publication and modern registrar addresses do not independently establish Canadian or Quebec jurisdiction over 2019 conduct.

Thai privacy timing. The PDPA was enacted in May 2019. Section 2 deferred substantive protection chapters; subsequent decrees extended the principal transition through May 31, 2022. Do not backdate later-operative consent/collection duties to June 2019. Proven handling after June 1, 2022 requires separate assessment, including section 95 on previously collected data. Saying Thailand had no data-protection statute at all is inaccurate. PDPA ss.2/95 [S038]; 2021 decree [S039].

Thai child protection. Sections 26(3), (6), (7) concern specified inappropriate/risky conduct, harmful work/acts and commercial activity affecting development. Section 27 concerns publication with an intention to damage the child's interests or obtain unlawful benefit. Consent does not replace these tests; some provisions address risk rather than completed injury. Child-fronted promotion and a contest invitation alone do not prove the necessary elements. Act, ss.26-27/78-79 [S040].

Prescription requires a separate Thai-law assessment of the proposed offence, conduct date and procedural history. The earlier analysis relied on Penal Code s.95 through S041, whose URL no longer returned the document in this pass; this edition does not certify a limitation-period outcome. Obtain the operative statutory text and prosecution history before asserting that a 2019 act is prosecutable or time-barred. Later conduct needs its own dates; an old page remaining available does not automatically establish a new offence.

Thai digital assets. The 2018 Decree distinguishes offerings and exchange/broker/dealer businesses. Rights, consideration, service and territory require classification. The contemporary ready-to-use utility-token exemption is not proven merely by educational branding, free distribution or a future-store promise. Observed KID/XEM pairs correct "never against value," but do not alone establish fundraising or an exchange business. 2018 text, ss.3/16-20/26 [S042]; June 2018 SEC notice [S043].

Singapore officer duties. Companies Act s.156 raises transaction-interest disclosure questions; s.157 addresses honesty, reasonable diligence and improper use of office-derived information, with civil and criminal consequences. Test actual Foundation decisions, resources, material-date office, participation,

disclosure and authorization. Public family disclosure is not necessarily the corporate disclosure required; missing minutes do not prove non-disclosure. Act ss.156-157 [S044]; 2019 judgment, para.100 [S045]; s.157 consequences, para.48 [S046].

English Thai-law texts are working/unofficial translations; the Thai originals govern. The accompanying September 6 legal-validation memo preserves primary documents, historical-version qualifications and retrieval limits. No offence is adjudicated by this master.

17. Conditional privacy, securities and criminal routes

These routes are conditional legal analyses, not findings that Canada, Quebec, the United States or another territory actually had jurisdiction over the recovered 2019 activity.

Framework	Conduct-to-law question
Historical PIPEDA	If covered commercial processing with sufficient Canadian connection existed: meaningful consent, limited collection, notice, permitted use/retention and safeguards. OPC guidance published December 2015 already expected parental consent for under-13s except exceptional cases; this is regulator interpretation, not a universal age ban. PIPEDA did not make every consent failure a criminal offence. [KL01-KL02]
Historical Quebec private-sector privacy law	The exact 2 June 2019 consolidation supplies collection, necessity, notice, security and use/disclosure duties and a penal route. Section 93 requires an officer to have prescribed, authorized or consented to the offending act/omission; title alone is insufficient. Prove the enterprise, Quebec connection and relevant conduct; do not backdate later Law 25 thresholds or penalties. [KL03]
Historical COPPA	If a covered child-directed operator/U.S. nexus is established: parental notice/consent, prize over-collection, security and retention are separate questions. Ages 8-12 fall within the advertised range. Website accessibility alone does not settle scope.
Platform rules	Contest rules, privacy notice and age requirements can be relevant platform obligations. A platform-policy violation is not automatically a statutory crime.
Securities/digital-asset regulation	Examine the precise token rights, offers, consideration, services and territory. Educational branding does not decide classification. Neither the small reciprocal trades nor an unused token alone establishes a securities offence.
Criminal fraud	Identify a dishonest representation, actor, required knowledge, causal property/economic harm or risk under the applicable law. Failure to complete a business or absence of recovered redemption records alone does not prove knowing deception.

The case should not be presented as “collecting child information is illegal everywhere.” Equally, lack of a sale or hack does not eliminate every possible consent, necessity or safeguard violation. Actual data, notice and processing records are necessary to establish the operating facts.

The record contains no sexual-content solicitation, sexual purpose, threats, coercion, documented injury or identified illicit data sale. The safeguarding concerns must therefore be stated as their actual conduct rather than labelled sexual exploitation or criminal child abuse without matching elements.

Historical sources: PIPEDA, April 2019 consolidation [S047]; exact June 2019 Quebec consolidation [KL03], supplementing the prior pre-reform text [S048]; 2013 COPPA rule [S049]; OPC cross-border decision [S050]. The 2013 COPPA definition includes soliciting online submissions: absence of a verified entrant does not alone dispose of every potential notice issue, but solicitation alone does not establish a completed violation. A covered service and U.S. nexus must still be established. [KL21-KL22] The prior full legal register remains supporting analysis; exact limitation outcomes are not certified here.

18. Remaining records and corrected interpretation

The chain identifies amounts, sequence and signing authority; business records must identify purpose, entitlement and human custody. Repeated 20-KID forwarding is not two prizes; historic CA\$52,553.72 receipts are not a proven KID grant; shared keys are not exclusive Laura custody; later domain misuse is not attributed to the original team. Public-record absence does not prove an event never happened.

Item	New evidence now available	Remaining decisive records
EV-033 - contest outcomes	Two matching archive descriptions; selection-only awards and alternative wallet clarified. No entry or award ledger recovered.	Entry receipts, selection, anonymized winner/payment mapping and exact payout hashes.
EV-034 - consent and mailbox handling	January/April 2019 server records; real policy paths and contemporary YouTube notice rules. Policy bodies and actual permissions remain missing.	Historical MX, account creation/admin/access, notices/consent, publication permission, retention and deletion.
EV-035 - production software	Source-tree leads and exact Play URL circulation dated 4 December 2018 by platform history. No production binary.	Signed distributed binary, package/release record, source/build match and release approval.
EV-036 - quiz and redemption	Regional descriptions and institutional citation chains clarified.	Backend/reward ledger, executed merchant terms, actual purchases and settlements.
EV-037 - commissioning and control	ODT predecessor, proposed contributions and 2023 certificate transition.	Commissioning/acceptance/payment, dated human channel/domain/mail control and handover.
EV-038 - 21 payment purposes	Node-reward category separately corroborated; exact SEA/issuer references retained.	Contracts, invoices and approvals for twelve SEA receipts and nine issuer transfers.
EV-039 - signing mandates	July 2019 Gemdealer label; 1-of-6 education threshold and exact transaction-role distinction in section 8. The associated key was added, not recorded as signing either setup transaction.	Civil identity, stake-redemption mapping, independent approvers, custody transfers and dated mandates.
EV-040 - exchange customers	Current liquidator route and exact historical address/reference pairs.	Correct service entity, credited customer, authorized operator, trades, withdrawals and settlements.
EV-041 - conflicts/resources	Publicly discussed family overlap, recorded statements and direct written transparency positions in sections 2 and 13.	Adopted policy, declarations, recusals, independent approvals, resource allocations and published minutes/reporting history.
EV-042 - elections/appointments	Institutional sequence plus separate reported Malaysian non-remunerated directorship.	Governing versions, notices, membership/quorum, signed minutes and filed appointment instruments.
EV-043 - audit discrepancy	Separate US tax return recovered and correctly separated.	Singapore Foundation signed audited statements and the 27.3%/43% allocation reconciliation.
EV-044 - reserves/wind-down	Three-source/125-target table and Trust 2021 notices; Ventures' stated Operating Costs Fund source now identified, without an initial transfer match.	Downstream transactions, executed transfers/settlements, later custody and actual surplus beneficiary receipt.
Item	New evidence now available	Remaining decisive records
EV-045 - institutional delivery	Government/university records, Bangkok opening announcement,	Contract, acceptance, usage, paid invoice and enduring deployment records for each

Item	New evidence now available	Remaining decisive records
	partnership-support attribution and Tutellus course launch; later operating evidence remains limited.	claim, including NEM/TTA hub operations and Kind Heaven implementation.

The reserve table, stated Ventures source-fund name and education transaction roles are answered within their stated limits. The thirteen compound items still lack the decisive business, custody or entrant records listed above. Contest records should be handled with minimized child disclosure. This is not a sworn witness statement or compulsory-access record; no child, historical inbox, regulator or third party was contacted.

19. Core accounts

Role used in this master	Full NEM address
Mixed-use issuer	NC7HKOMA4N4ZCYJ7PXJPUGGQLSBLQL6S6LEFQHNZ
Staging	NADLLJRTUU73OZ4MU5PY47PUMWQZUGG25GVVRB4X
Distributor	NC6JT7YGYASHVZ2NNS4TK372PTDXBUS354XG7TL4
Development fund	NA5JKIQRYPQ6XB3BT2NQWY4SYH4L6Q43OKVKG2PS
Education fund	NDSTP4YZPMGACPKS26PV4U4VX63WZRD76UNB7IRL
Laura-associated shared signer	NBDCOCHCTOKI3RY46YK7EPPQRG2UHPNCNUQIDVLU5
Issuer signer / levy destination	NCEUKZQJXJGQSTEWUIRURSQVX2MDTXU5ZW37YQ4I
Foundation SEA regional	NASEACHB4GDLNLC2EGU7KQB3T2WY23UWTNVUSLKH
Old Foundation operating	NBFOUNDXB54PVVPG6AN4WJ7BAOYFBC2XLLH DU5YM
Secondary branch common key	NCYKQWAU23TD2XSZFNLUVSA7XG4UY5LWJLBP2IRE
Secondary branch common cosigner	NBGTCEUP2YW4Y47Q2ACZYCDME6VV6OVVBN7PSS3
Parallel-payment recipient	NAYIOJM4JXMZXX4QLKROYKTIRGS66244RT6W6PH3
Historical Bittrex-attributed destination	ND2JRPQIWXHKAA26INVGA7SREEUMX5QAI6VU7HNR
Binance-labelled destination	NC64UFOWRO6AVMWV2BFX2NT6W2GURK2EOX6FFMZ

Body abbreviations identify these addresses, not legal owners. The companion chain report retains all 24 collected account histories, dated XEM snapshots and additional neighbors.

20. Evidence and edition history

Quantitative scope is governed by KIDLETCOIN_COMPLETE_HISTORY_AND_LINKS_2026-09-05.md and its evidence ZIP; 49-row valuations by KIDLETCOIN_TRANSFER_VALUES_CAD_2026-09-05.md and CAD evidence ZIP. Source authentication is documented in LAURA_KIDLET_NEM_EVIDENCE_AUDIT_2026-09-05.md; curriculum provenance in KIDLET_CURRICULUM_PROVENANCE_2026-09-05.md. Historical Thai/Singapore corrections follow the 6 September legal-validation memo.

The 84-page RESEARCH_KIDLETCOIN_NEM_UPDATED_CONSOLIDATED_MEMORANDUM_2026-09-05.pdf retains 362 source entries and detailed election/treasury registers. August 30 memoranda and supplied legal addendum remain prior research, with corrected interpretations governed here. Branding-reference hashes: KID f05c87e223c8e63c4ef181a806161d248bccf3738de318c7ade40c5dbd50d341; NEM 3605b3a285e92d55aa1a2120242d1c9d6f66e76236ea587ab8497c87516aedff.

The 6 September editable master was reconstructed and reconciled against the surviving 24-page PDF after source-package download failed. This 7 September editorial consolidation removes repeated update narratives while preserving material findings, source IDs and legal limits. Raw WARC/certificates, platform responses, reserve transcription, IRS filing and retrieval/integrity manifests remain evidence. The companion chain report retains 28 KID transfers, 90 references, four maps and 24 dated account rows; 125 Symbol targets are relocated intact to CSV. Hashes identify bytes, not truth. No new chain or price refresh is claimed.

The two NEM videos are integrated into sections 2 and 13, with supporting source distinctions in sections 12 and 15. Source identifiers V01-V08 locate the videos and corroboration; automatic-caption review is separate from audio authentication. The substantive findings and historical on-chain totals remain unchanged.

Source register - printable reference URLs

These original links identify the records cited in the retained baseline; added September 6 source identifiers follow in the supplemental register. The September 6 legal check revalidated specified Thai/Singapore authorities. The predecessor full source register and raw evidence provide broader detail.

Records review:

KidletCoin consent and adult responsibility

Requested assessment. Identify the adults responsible for the child-directed contest and determine whether information was received, used or published with the required permissions and safeguards. The public solicitation is documented; actual entries, parent permissions and Laura's control of those entries are not yet established. This research is not an eyewitness statement.

Start with sections 2, 4 and 5. They supply Laura's dated public involvement, the original contest and its limits, and the distinction between reviewed source code and a released app. Sections 16-17 set out the historical legal boundaries. The following requests identify evidence that could confirm or rebut the concern.

Added public statements. Section 2 supplies timestamped review points; section 13 separates Tinsman's endorsement from Laura's own written positions. These support questions about involvement, custody and

accountability. They do not replace the actual consent, access, approval or custody records sought below. Verify the audio before using an exact quotation.

Priority	Records to identify and preserve	Question resolved
1. Contest operator	Approved June 2019 rules, full solicitation video/description history, linked policy versions, email auto-replies, commissioning and publication approvals.	Who designed and approved the offer, and what did children and parents actually see?
2. Entry and permission records	A coded receipt/selection register for the June 2019 contest, then relevant source messages; consent and publication releases with accepted version, time, signatory authority and permitted uses.	Did entries arrive; which age bands/countries were involved; did valid permissions precede each relevant use?
3. Historical inbox and hosting	Identify the actual provider/subscriber for info@kidlet.io; dated admins/delegates, forwarding/export and access records, MX/configuration history, backups and handover. The 2019 IP is a provider lead, not proof Google hosted the mailbox.	Who could read, copy or transfer entries, including any access held or relinquished by Laura?
4. YouTube channel	Owner/manager roles and changes for UC2sui4vaP9sWpevdKbytQUA; upload/edit records; retained private, unlisted or deleted entry videos; publication permissions and visibility dates.	Who published material, whether entrant videos appeared, and under what authorization?
5. Awards and later handling	Map coded entrant IDs to selection decisions and exact KID payout hashes; approved retention schedules and executed deletion, backup, reuse and transfer records.	Were promised selected awards delivered; what information survived the contest and who later used it?
6. Released wallet and quiz	Google Play publisher/release records for com.kidletcoin.app from December 2018 onward; original APKs and any later bundles, signing certificates, accepted source/build and release approvals; separate quiz backend and reward records.	Was the reviewed code shipped, which data were actually processed, and who approved the service?

Interviews should identify the responsible adults, test each claimed authority against dated records, and invite any permissions, payment or handover evidence that confirms or rebuts the concern.

Preservation and legal route. Begin with existing, relevant records and coded entrant identifiers; keep actual child identities, images and credentials under appropriate investigative control. An authorized preservation request protects data still held and does not recreate deleted records or automatically obtain disclosure. If Canadian police investigate, Criminal Code s.487.012 is an officer power subject to statutory conditions, not a power of the complainant, and cannot be directed to the person under investigation. International/provider process may be needed. A privacy-regulator referral can be assessed separately. No provider, regulator, child or historical inbox has been contacted. [KL07-KL08; KL11-KL12]

What this report does not allege. It does not establish a child-data sale, sexual purpose, fingerprint database, credential theft, or Laura's personal access to entries. It does not attribute the later gambling-domain operator to her. The question is actual adult decisions and data handling, assessed under the law in force for the relevant place and date. The NEM payments remain a separate purpose-and-approval inquiry; none is established as payment for children's data.
