

Laura attribution follow-up

Historical source edition | 7 September 2026

Public crypto research edition. The following material preserves historical analysis, source identifiers, transaction amounts and stated qualifications. Observations retain their original dates, principally 5-7 September 2026. Preparing this edition did not repeat the blockchain, corporate-registry or legal research.

Read each assertion with its cited source and limits. A public role, a wallet connection or a valid transaction does not by itself identify a human operator, prove personal receipt or establish wrongdoing. The reports distinguish findings, interpretations and unanswered questions.

Correction precedence: the 7 September 2026 ShibaFriend claims review reports repayment of the principal of all 23 non-dust funding addresses, with only 168 base units of dust unmatched. It also reports equal project matches for all 194 identified paid Mystery Box mints. Those later findings supersede earlier uncertainty about those specific questions. See [Research_Paper_ShibaFriend_Claims_Review.pdf](#).

Original source-page labels and reference identifiers are retained where useful. Gaps in numbering reflect the crypto-only scope. Historical references to companion records are locators; consult the repository inventory to see which records are included. Current availability of an external source is not guaranteed.

Contents and document control

| Consolidated review | 7 September 2026

Read the events by date and network. A role, address connection or valid signature does not alone identify the person responsible or prove their purpose. Verified refunds, delivered allocations and outstanding tokens are included.

Consolidated attribution assessment, updated 7 September 2026. Times are UTC. BSC monetary events, third-party GAMI delivery and Polygon activity are separated.

Present conclusion

The November 2022 permission changes, removal of 44 million GMI and sale for 5,174.293394005109506048 BUSD remain documented. **Laura's instruction, historical signing-key custody, personal receipt and the cause of her departure remain unproved.** Her public role and a short farewell cannot supply those links; succession also does not prove that every key was surrendered.

The earlier 63,001.817377359365034843 BUSD campaign subtotal now has materially different outcomes: **original FOMO principal was fully refunded, original GAMI allocations match every funding address and are backed, and Time Raiders' BSC cash balance is located.** The August treasury sweep and project 4 circuit identify sharper accounting questions. They do not establish a stolen total. [R4-R6]

Departure and separate technical handovers

An official 27 August 2022 post still described Laura as CEO, while promoting an interview published 2 August. Eleanor Rooney was announced 1 September. The contemporaneous Medium/Wayback announcement gives no departure reason, misconduct allegation or handover terms. This fixes the public presentation change within five days, not the internal notice period or whether she was dismissed. Eleanor's 3 October operational pause cites token performance, rebuilding and market conditions; it does not explain Laura's departure. [S1-S4]

2022 UTC	Documented change
19 September 09:51:41	NFT owner 14cc→f27f. [T1]
19 September 14:24:11	Withdrawal Safe owner 7e01→afd9. [T2]
29 September 08:24:51	Launchpool owner 3e0f→f27f. [T3]
4 November 04:29:30	Upgrade administrator 3e0f→538a. [T4]
5 November 05:51:26	538a moves upgrade authority into permission Safe. [T5]
5 November 06:14:38	Temporary upgrades grant allowance; original implementations return. [T6]
5 November 06:45:09 /06:51:21	44 million GMI removed, then sold. [T7-T8]

The removal was 65 calendar days after the CEO announcement. Connecting it causally to her earlier departure requires evidence of earlier planning or another earlier event, plus participation. These distinct address-level transitions are not a single proven human handover.

The September Safe transaction also successfully sent 0.1 BNB and a different token, d4cdbd31..., to afd9 before replacing the owner. All three ordered Safe calls emitted success events; token/owner events and adjacent balances corroborate the movement. No internal trace was obtained. afd9's first direct BSC transaction followed at 14:26:14; f27f's was 21 September 10:31:00, and 538a's was 4 November 07:53:58. Nonce-zero dates do not date key creation, off-chain Safe signatures or activity on other networks. [R1, R3]

Earlier money: customer outcomes and pooled custody

FOMO: All 34 funding transactions from 27 addresses, totalling 3,775.228767123287671432 BUSD, match the 27 same-day principal repayments exactly. Two batch transactions on 23 May 2022 completed refunds at 15:37:05. This closes that original campaign's principal-refund gap, not later FOMO, staking or NFT obligations. [R4]

GAMI, distinct from GMI: All 154 original funding events from 127 addresses total 28,421.141280969119319259 BUSD. Their recorded 284,211.41280969119319259-GAMI allocations match the 28 March vesting setup exactly. At block 120,402,387 on 7 September 2026, 53 funding addresses had fully claimed, 62 partially claimed and 12 had no recorded claim. Remaining buyer allocations are fully included in the contract's 290,789.005821999944860026-GAMI balance, exactly equal to all 157 records' remaining amounts. All schedules are mature and the token is unpaused. [R5]

The setup additionally assigned 271,343.58719030880680741 GAMI to 30 addresses absent from that funding census, each near 9,044.78624 GAMI. All 30 have partially claimed. Their entitlement and purpose require records; they did not reduce the 127 original funders' exact allocations. Claim counters and funded allocations are not a complete ultimate-recipient census.

Time Raiders: The original 23,722.715761539594859905 BUSD was matched by the recipient d2b8's exact BSC balance at block 120,394,077, 6 September 2026 23:55:32. Custody and issuer entitlement remain accounting questions. [R4]

Distinct Polygon event - 13 November 2025. All 80 original Time Raiders BSC funding addresses received initial XPND distributions. Original payments and 437 successful later claims reconcile exactly to all 149 Polygon vesting records. Before the later upgrade, 107 addresses had outstanding tokens, including **38 original funding addresses owed 443,781.846196483910388258 XPND** under the recorded allocations. The other 42 original funding addresses had received their full allocations.

At **11:37:26 UTC**, outer sender 0x4d96f2d2143dd74a96d015a70953a5686fa6ed55 submitted a transaction to 3e0f containing a valid EIP-7702 delegation authorization. It replaced an existing delegation and transferred ProxyAdmin ownership to 4d96. At **11:39:08**, 4d96 upgraded vesting proxy 0xcfb37488ee5ebbadf9b879c05d318beb7b85f6a5; at **11:40:16**, it withdrew **1,512,577.663750419638336396 XPND to itself**. This exactly equalled the contract balance and all recorded unclaimed tokens immediately before the upgrade. At **11:46:10**, it sold the entire received amount through a swap paying **325.142524926446493136 native POL gross** to the same address. Intermediate route assets are not additional proceeds.

Signature recovery independently confirms **3e0f's address-level authorization of the code delegation**. It does not identify a human or establish informed approval of the subsequent business actions. Ordinary vesting ownership had moved to f27f in September 2022, while the separate upgrade authority remained with 3e0f at the relevant historical observations. The distinction matters: handing over ordinary ownership did not itself revoke upgrade power.

This is documented removal and sale of backing for mature unclaimed allocations. Later replacement agreements, recovery, compensation, economic loss and human responsibility remain unresolved. Explorer phishing labels are third-party annotations, not identity findings. No evidence here attributes the event to Laura, and its 2025 date cannot explain a 2022 departure without a further evidentiary link. The BUSD held at d2b8 on BSC remains a separate asset and balance observation.

Primary transactions: [delegation / control](#); [upgrade](#); [withdrawal](#); [sale / payout](#). Full tables, raw records, scope limits and independent review are in the current project-withdrawal report and [timeraiders_delivery / timeraiders_review](#) evidence folders. The [EIP-7702 specification](#) supplies the signature rules.

Pooled wallet 35b1: GAMI and Shibafriend cash entered a wallet with substantial existing balances. Its complete 184 signed transactions and 301 selected token events are receipt-verified. External BUSD and USDC turnover totals 634,245.652848696482503518 and 1,360,439.274293674825498827 respectively, with matching outgoing totals and zero balances at the pinned research block. These are pooled flows, not a loss or fresh financing calculation. [R6]

On 3 August 2022, 35b1 swept **390.50307622 BNB, 26,626.652848696482503518 BUSD and 2302 USDC to 14cc**. The stablecoin payments exhausted their balances. On 4 August, 14cc supplied 200 BNB; 35b1 converted it to 60,439.274293674825498827 USDC and returned it. That conversion/return is not an additional independent diversion. Recurring counterparties, a 20,000-BUSD payment on 30 May to private-route wallet f4f8 and later BNB links need business ledgers. [R6]

Project 4: 35b1 supplied sole contributor 391a with participation GMI and gas; its 2000 BUSD followed 35b1→private-beneficiary 3604→391a→project on 11 March. On 23 March, owner 3e0f changed the receiver to 35b1, then withdrew 2000 there 90 seconds later. This establishes an operational circuit, not a proven

internal test, common human owner or theft of an outside customer's money. The March cash is not proceeds of later November private-vesting claims. [R7]

Shibafriend: All 26 funding addresses are known, but the 29 June choice of private SHF plus 1000 GMI or refund remains unreconciled. Two overlaps with treasury payees on 27 June do not match contributions. Two distinct SHF token contracts now lead through 35b1/3e0f toward 74f7, with the newer version also paying 3643. Neither destination is an original funder; an intermediary delivery remains possible. Choices, version-specific entitlement and onward delivery require records. [R4, R6]

The administrative-key and replenisher connection

On 14 September 2022 at 08:16:32, 14cc sent 100 BNB to 9490, which replenished the staking pools in May 2023. This independently verified payment connects the August sweep recipient, the May/June project owner/NFT administrator and later replenisher. It does not identify their humans or establish that Laura supplied the funds. 9490 held 101 BNB before its first outgoing transaction, so 100 BNB is not its complete incoming history. [R2]

538a's first native funding was 0.04771156499999979 BNB from 5dce...8300 on 4 November 05:41:12. The source and broader purpose remain unidentified. Deployment records provide another concrete route: public account KhanhHuyDev committed relevant BSC manifests in April/July/August 2022. The 143-commit/34-PR-head review found no targeted custody instruction. A contributor or Avark's published development engagement does not prove key custody or an employment relationship. [R3; S5-S7]

November proceeds and decisive missing records

The 5174-BUSD route reaches 4727 through 96f0. A FixedFloat administrator-labelled 10 May 2025 statement identifies 4727 among outgoing wallets; it does not establish the 2022 customer, historical custody or deposit/order/payout mapping. A similar subsequent pooled-wallet payment cannot identify this customer's payout. [S8-S9; T9-T10]

The decisive records are dated custody/delegation mandates, transaction instructions, project 4's purpose, 35b1/14cc sweep accounting, extra-GAMI entitlement, SHF elections/deliveries, the historical FixedFloat mapping, and resignation/termination/access-revocation records. Personal receipt is one possible attribution link; authenticated direction or knowing participation may also matter. Bank statements are relevant where fiat settlement is claimed, not a substitute for already verified crypto refunds and allocations.

Different operators, authorized restructuring, compromise and earlier misconduct remain hypotheses requiring evidence; neither key use nor later top-ups selects one. No person was contacted and no transaction broadcast. Public archives/code and targeted chain records cannot replace private custody records; retrieval failures are not negative findings. The source register preserves the original archive and transaction anchors alongside the integrated evidence schedules.
